1 Introduction

The goal of the ONVIF test specification set is to make it possible to realize fully interoperable IP physical security implementation from different vendors. The set of ONVIF test specification describes the test cases need to verify the [ONVIF Network Interface Specs] and [ONVIF Conformance] requirements. In addition, the test cases are to be basic inputs for some Profile specification requirements. It also describes the test framework, test setup, pre-requisites, test policies needed for the execution of the described test cases.

This ONVIF Access Rules Test Specification acts as a supplementary document to the [ONVIF Network Interface Specs], illustrating test cases need to be executed and passed. In addition, this specification acts as an input document to the development of test tool that will be used to test the ONVIF device implementation conformance towards ONVIF standard. This test tool is referred as ONVIF Client hereafter.

1.1 Scope

This ONVIF Access Rules Test Specification defines and regulates the conformance testing procedure for the ONVIF conformant devices. Conformance testing is meant to be functional black-box testing. The objective of this specification is to provide test cases to test individual requirements of ONVIF devices according to the ONVIF Access Rules Service, which is defined in [ONVIF Access Rules Service].

The principal intended purposes are:

• Provide self-assessment tool for implementations.

• Provide comprehensive test suite coverage for [ONVIF Network Interface Specs].

This specification does not address the following:

• Product use cases and non-functional (performance and regression) testing.

• SOAP Implementation Interoperability test i.e. Web Service Interoperability Basic Profile version 2.0 (WS-I BP 2.0).

• Network protocol implementation Conformance test for HTTP, HTTPS, RTP and RTSP protocol.

• Wi-Fi Conformance test

The set of ONVIF Test Specification will not cover the complete set of requirements as defined in [ONVIF Network Interface Specs]; instead it will cover its subset.
This ONVIF Access Rules Test Specification covers the ONVIF Access Rules Service, which is a functional block of [ONVIF Network Interface Specs]. The following section gives a brief overview of each functional block and its scope.

1.1.1 Capabilities

The Capabilities section covers the test cases needed for getting capabilities from an ONVIF device.

The scope of this specification section is to cover the following functions:

- Getting capabilities with GetServiceCapabilities command
- Getting capabilities with GetServices command via Device service

1.1.2 Access Profile Info

The Access Profile Info section covers the test cases needed for getting access profile list and information from an ONVIF device.

The scope of this specification section is to cover the following functions:

- Getting access profile information with GetAccessProfileInfo command
- Getting access profile information list with GetAccessProfileInfoList command

1.1.3 Access Profile

The Access Profile section covers the test cases needed for getting access profile from an ONVIF device.

The scope of this specification section is to cover the following functions:

- Getting access profile with GetAccessProfiles command
- Getting access profile list with GetAccessProfileList command
- Creating access profile with CreateAccessProfile command
- Modifying access profile with ModifyAccessProfile command
- Deleting access profile with DeleteAccessProfile command
- Creating and modifying access profile with SetAccessProfile command
1.1.4 Events

The Events section covers the test cases needed for checking specified events format.

The scope of this specification section is to cover the following functions:

- Getting event properties with GetEventProperties command

1.1.5 Consistency

Consistency test cases cover verification of consistency between different entities and commands.

Consistency between the following entities is covered by the following test case:

- Access Policies and Access Point
2 Terms and Definitions

2.1 Definitions

This section describes terms and definitions used in this document.

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Access Policy</td>
<td>An association of an access point and a schedule. It defines when an access point can be accessed using an access profile which contains this access policy. Several access policies specifying different schedules for the same access point will result in a union of the schedule.</td>
</tr>
<tr>
<td>Access Profile</td>
<td>A collection of access policies, used to define role based access. Two types of access profile can be defined for example: standard access profile and temporary access profile. The difference between the two, is that temporary access profile have optional validity from / to dates, and standard access profile do not.</td>
</tr>
<tr>
<td>Access Point</td>
<td>A logical composition of a physical door and ID point(s) controlling access in one direction.</td>
</tr>
<tr>
<td>Credentials</td>
<td>A physical/tangible object, a piece of knowledge, or a facet of a person’s physical being, that enables an individual access to a given physical facility or computer-based information system.</td>
</tr>
<tr>
<td>Credential Number</td>
<td>A sequence of bytes uniquely identifying a credential at an access point.</td>
</tr>
<tr>
<td>Validity Period</td>
<td>From a certain point in time, to a later point in time. If a validity period is set on several entities (such as credentials, access profile and the association between them) the resulting validity period is the intersection of the three period.</td>
</tr>
<tr>
<td>Schedule</td>
<td>A set of time periods, for example: working hours (weekdays from 08:00 AM to 06:00 PM). It may also include one or more special days schedule.</td>
</tr>
<tr>
<td>Role based access</td>
<td>It is a method of regulating access to resources, for example: premises, building etc.</td>
</tr>
</tbody>
</table>

2.2 Abbreviations

This section describes abbreviations used in this document.

- **DUT**  Device Under Test
- **HTTP**  Hypertext Transfer Protocol
- **PACS**  Physical Access Control System
3 Test Overview

This section describes about the test setup and prerequisites needed, and the test policies that should be followed for test case execution.

3.1 Test Setup

3.1.1 Network Configuration for DUT

The generic test configuration for the execution of test cases defined in this document is as shown below (Figure 1).

Based on the individual test case requirements, some of the entities in the below setup may not be needed for the execution of those corresponding test cases.

**Figure 3.1. Test Configuration for DUT**

- **DUT**: ONVIF device to be tested. Hereafter, this is referred to as DUT (Device Under Test).
- **ONVIF Client (Test Tool)**: Tests are executed by this system and it controls the behavior of the DUT. It handles both expected and unexpected behavior.
- **HTTP Proxy**: provides facilitation in case of RTP and RTSP tunneling over HTTP.
- **Wireless Access Point**: provides wireless connectivity to the devices that support wireless connection.
DNS Server: provides DNS related information to the connected devices.

DHCP Server: provides IPv4 Address to the connected devices.

NTP Server: provides time synchronization between ONVIF Client and DUT.

Switching Hub: provides network connectivity among all the test equipments in the test environment. All devices should be connected to the Switching Hub. When running multiple test instances in parallel on the same network, the Switching Hub should be configured to use filtering in order to avoid multicast traffic being flooded to all ports, because this may affect test stability.

Router: provides router advertisements for IPv6 configuration.

3.2 Prerequisites

The pre-requisites for executing the test cases described in this Test Specification are:

- The DUT shall be configured with an IPv4 address.
- The DUT shall be IP reachable [in the test configuration].
- The DUT shall be able to be discovered by the Test Tool.
- The DUT shall be configured with the time i.e. manual configuration of UTC time and if NTP is supported by DUT, then NTP time shall be synchronized with NTP Server.

3.3 Test Policy

This section describes the test policies specific to the test case execution of each functional block.

The DUT shall adhere to the test policies defined in this section.

3.3.1 Capabilities

The test policies specific to the test case execution of Capabilities functional block:

- DUT shall give the Access Rules Service entry point by GetServices command, if DUT supports this service. If DUT does not support Access Rules Service, these test cases will be skipped.
- DUT shall support the following commands:
  - GetServices
• GetServiceCapabilities

• The following tests are performed

• Getting capabilities with GetServiceCapabilities command

• Getting capabilities with GetServices command

Please, refer to Section 4.1 for Capabilities Test Cases.

3.3.2 Access Profile Info

The test policies specific to the test case execution of Access Profile Info functional block:

• DUT shall give the Access Rules Service entry point by GetServices command, if DUT supports this service. If DUT does not support Access Rules Service, these test cases will be skipped.

• DUT shall support the following commands:

  • GetServices

  • GetServiceCapabilities

  • GetAccessProfileInfo

  • GetAccessProfileInfoList

• DUT shall not return more items in GetAccessProfileInfo and GetAccessProfileInfoList responses than specified in service capabilities by MaxLimit.

• DUT shall not return more items in GetAccessProfileInfoList response than specified by Limit parameter in a request.

• DUT shall not return more AccessProfilesInfo items in GetAccessProfileInfoList responses than specified in service capabilities by MaxAccessProfiles.

• DUT shall not return items with the same tokens in GetAccessProfileInfoList responses for one access profile info list receiving.

• DUT shall not return any fault if GetAccessProfileInfo was invoked for non-exciting AccessProfile token. Such tokens shall be ignored.

• DUT shall return SOAP 1.2 fault message (InvalidArgs/TooManyItems) if more items than MaxLimit was requested by GetAccessProfileInfo command.

• The following tests are performed
• Getting access profile info with GetAccessProfileInfo command
• Getting access profile info list with GetAccessProfileInfoList command with using different Limit and NextReference values
• Getting access profile info with invalid access profile token
• Getting access profile info with number of requested items is greater than MaxLimit

Please refer to Section 4.2 for Access Profile Info Test Cases.

3.3.3 Access Profile

The test policies specific to the test case execution of Access Profile functional block:

• DUT shall give the Access Rules Service entry point by GetServices command, if DUT supports this service. Otherwise, these test cases will be skipped.

• DUT shall support the following commands:
  • GetServices
  • GetServiceCapabilities
  • GetAccessProfiles
  • GetAccessProfileList
  • GetAccessProfileInfoList
  • CreateAccessProfile
  • ModifyAccessProfile
  • DeleteAccessProfile

• If DUT supports Client Supplied Token as indicated by Capabilities.ClientSuppliedTokenSupported = true, DUT shall support the following commands:
  • SetAccessProfile

• DUT shall return only requested items in GetAccessProfiles response that specified in GetAccessProfiles request.

• DUT shall return all requested items in GetAccessProfiles response that specified in GetAccessProfiles request.
- DUT shall not return more items in GetAccessProfiles responses than specified in service capabilities by MaxLimit.

- DUT shall return the same information in GetAccessProfiles responses and in GetAccessProfileInfoList responses for the items with the same token.

- DUT shall not return more items in GetAccessProfileList response than specified by Limit parameter in a request.

- DUT shall not return items with the same tokens in GetAccessProfileList responses for one access profile list receiving.

- DUT shall return the same information in GetAccessProfiles responses and in GetAccessProfilesList responses for the items with the same token.

- DUT shall return the same information in GetAccessProfileList responses and in GetAccessProfileInfoList responses for the items with the same token.

- DUT shall return the access profiles in GetAccessProfileList responses and in GetAccessProfileInfoList responses.

- DUT shall support creation of access profile.

- DUT shall support modifying of access profile.

- DUT shall support deletion of access profile.

- If DUT supports Client Supplied Token as indicated by Capabilities.ClientSuppliedTokenSupported = true, creating and modifying of access profile using SetAccessProfile command.

- DUT shall not return any fault if GetAccessProfiles was invoked for non-exciting AccessProfile token. Such tokens shall be ignored.

- DUT shall return SOAP 1.2 fault message (InvalidArgs/TooManyItems) if more items than MaxLimit was requested by GetAccessProfiles command.

- The DUT shall support creating of access profile.

- The DUT shall support modifying of access profile.

- The DUT shall support deleting of access profile.

- DUT shall return SOAP 1.2 fault message (InvalidArgs) if access profile token is specified in CreateAccessProfile request.

- DUT should return SOAP 1.2 fault message (CapabilityViolated/MultipleSchedulesPerAccessPointSupported) if multiple schedules for the same access point
is sent in the create access profile and MultipleSchedulesPerAccessPointSupported is not supported.

- DUT should return SOAP 1.2 fault message (InvalidArgVal/NotFound) if ModifyAccessProfile or DeleteAccessProfile command was invoked for non-exiting access profile token.

- The following tests are performed
  
  - Getting access profile with GetAccessProfiles command and test that it includes the same information with GetAccessProfileList command
  
  - Getting access profile info list with GetAccessProfileList command with using different Limit and NextReference values and test that it includes the same information with GetAccessProfileInfoList command
  
  - Creating access profile with CreateAccessProfile command with empty token and test that corresponding notification message is received
  
  - Modifying access profile with ModifyAccessProfile command and test that corresponding notification message is received
  
  - Deleting access profile with DeleteAccessProfile command and test that corresponding notification message is received
  
  - Getting access profiles with invalid access profile token
  
  - Getting access profiles with number of requested items is greater than MaxLimit
  
  - Creating access profile with CreateAccessProfile command with specified token
  
  - Creating access profile with multiple schedules for the same access point when MultipleSchedulesPerAccessPointSupported is not supported
  
  - Modifying access profile with ModifyAccessProfile command with invalid token
  
  - Deleting access profile with DeleteAccessProfile command with invalid token
  
  - If DUT supports Client Supplied Token as indicated by Capabilities.ClientSuppliedTokenSupported = true:
    
    - Creating access profile with SetAccessProfile command with empty token and test that corresponding notification message is received
    
    - Modifying access profile with SetAccessProfile command and test that corresponding notification message is received

Please refer to Section 4.3 for Access Profile Test Cases.
3.3.4 Events

The test policies specific to the test case execution of Events functional block:

- DUT shall give the Access Rules Service and Event Service entry points by GetServices command, if DUT supports this service. Otherwise, these test cases will be skipped.

- DUT shall support the following commands:
  - GetServices
  - GetEventProperties

- DUT shall support Pull Point Subscription and Topic Expression filter.

- DUT shall generate property events with initial state after subscription was done.

- DUT shall generate property events with current state after corresponding properties were changed.

- The following tests are performed
  - Getting event properties with GetEventProperties command

Please refer to Section 4.4 for Events Test Cases.

3.3.5 Consistency

The test policies specific to the test case execution of Consistency functional block:

- DUT shall give the Access Rules Service and Access Control Service entry points by GetServices command, if DUT supports this service. Otherwise, these test cases will be skipped.

- DUT shall support the following commands:
  - GetServices
  - GetAccessProfileInfo
  - GetCredentials

- The following tests are performed
  - Access Policies and Access Point consistency

Please refer to Section 4.5 for Consistency Test Cases.
4 Access Rules Test Cases

4.1 Capabilities

4.1.1 ACCESS RULES SERVICE CAPABILITIES

Test Case ID: ACCESS_RULES-1-1-1

Feature Under Test: GetServiceCapabilities (for Access Rules Service)

WSDL Reference: accessrules.wsdl

Test Purpose: To verify DUT Access Rules Service Capabilities.

Pre-Requisite: Access Rules Service is received from the DUT.

Test Configuration: ONVIF Client and DUT

Test Procedure:

1. Start an ONVIF Client.
2. Start the DUT.
3. ONVIF Client invokes GetServiceCapabilities.
4. The DUT responds with GetServiceCapabilitiesResponse message with parameters
   • Capabilities $\equiv$ cap

Test Result:

PASS –
   • DUT passes all assertions.

FAIL –
   • DUT did not send GetServiceCapabilitiesResponse message.

4.1.2 GET SERVICES AND GET ACCESS RULES SERVICE CAPABILITIES CONSISTENCY

Test Case ID: ACCESS_RULES-1-1-2
**Specification Coverage:** Capability exchange (ONVIF Core Specification), ServiceCapabilities (ONVIF Access Rules Service Specification), GetServiceCapabilities command (ONVIF Access Rules Service Specification)

**Feature Under Test:** GetServices, GetServiceCapabilities (for Access Rules Service)

**WSDL Reference:** devicemgmt.wsdl, accessrules.wsdl

**Test Purpose:** To verify Get Services and Access Rules Service Capabilities consistency.

**Pre-Requisite:** None.

**Test Configuration:** ONVIF Client and DUT

**Test Procedure:**

1. Start an ONVIF Client.
2. Start the DUT.
3. ONVIF Client invokes **GetServices** with parameters
   - IncludeCapability := true
4. The DUT responds with a **GetServicesResponse** message with parameters
   - Services list := servicesList
5. ONVIF Client selects Service with Service.Namespace = "http://www.onvif.org/ver10/accessrules/wsdl":
   - Services list [Namespace = "http://www.onvif.org/ver10/accessrules/wsdl"] := accessRulesService
6. ONVIF Client invokes **GetServiceCapabilities**.
7. The DUT responds with a **GetServiceCapabilitiesResponse** message with parameters
   - Capabilities := cap
8. If cap differs from accessRulesService.Capabilities.Capabilities, FAIL the test.

**Test Result:**

PASS –
- DUT passes all assertions.

FAIL –
• DUT did not send **GetServicesResponse** message.

• DUT did not send **GetServiceCapabilitiesResponse** message.

**Note:** The following fields are compared at step 8:

• MaxLimit

• MaxAccessProfiles

• MaxAccessPoliciesPerAccessProfile

• MultipleSchedulesPerAccessPointSupported

### 4.2 Access Profile Info

#### 4.2.1 GET ACCESS PROFILE INFO

**Test Case ID:** ACCESS_RULES-2-1-1

**Specification Coverage:** AccessProfileInfo (ONVIF Access Rules Service Specification), GetAccessProfileInfo command (ONVIF Access Rules Service Specification)

**Feature Under Test:** GetAccessProfileInfo

**WSDL Reference:** accessrules.wsdl

**Test Purpose:** To verify Get Access Profile Info.

**Pre-Requisite:** Access Rules Service is received from the DUT.

**Test Configuration:** ONVIF Client and DUT

**Test Procedure:**

1. Start an ONVIF Client.

2. Start the DUT.

3. ONVIF Client retrieves a complete list of access profile info (out `accessProfileInfoCompleteList`) by following the procedure mentioned in **Annex A.1**.

4. If `accessProfileInfoCompleteList` is empty, skip other steps.

5. ONVIF Client gets the service capabilities (out `cap`) by following the procedure mentioned in **Annex A.2**.
6. Set the following:
   • $tokenList := \text{[subset of } accessProfileInfoCompleteList.token \text{ values with items number equal to } cap.\text{MaxLimit]}$

7. ONVIF client invokes $\text{GetAccessProfileInfo}$ with parameters
   • Token list := $tokenList$

8. The DUT responds with $\text{GetAccessProfileInfoResponse}$ message with parameters
   • AccessProfileInfo list =: $accessProfileInfoList1$

9. If $accessProfileInfoList1$ does not contain AccessProfileInfo item for each token from $tokenList$, FAIL the test and skip other steps.

10. If $accessProfileInfoList1$ contains at least two AccessProfileInfo item with equal token, FAIL the test and skip other steps.

11. If $accessProfileInfoList1$ contains other AccessProfileInfo items then listed in $tokenList$, FAIL the test and skip other steps.

12. For each AccessProfile.token $token$ from $accessProfileInfoCompleteList$ repeat the following steps:
    12.1. ONVIF client invokes $\text{GetAccessProfileInfo}$ with parameters
        • Token[0] := $token$
    12.2. The DUT responds with $\text{GetAccessProfileInfoResponse}$ message with parameters
        • AccessProfileInfo list =: $accessProfileInfoList2$
    12.3. If $accessProfileInfoList2$ does not contain only one AccessProfileInfo item with token equal to $token$, FAIL the test and skip other steps.
    12.4. If $accessProfileInfoList2[0]$ item is not equal to $accessProfileInfoCompleteList[token = token]$ item, FAIL the test and skip other steps.

Test Result:

PASS –
   • DUT passes all assertions.

FAIL –
   • DUT did not send $\text{GetAccessProfileInfoResponse}$ message.
Note: If number of items in `accessProfileInfoCompleteList`, less than Capabilities = `cap.MaxLimit`, then all `accessProfileInfoCompleteList` items shall be used for the step 6.

Note: The following fields are compared at step 12.4:

- AccessProfileInfo:
  - token
  - Name
  - Description

### 4.2.2 GET ACCESS PROFILE INFO LIST - LIMIT

**Test Case ID:** ACCESS_RULES-2-1-2

**Specification Coverage:** AccessProfileInfo (ONVIF Access Rules Service Specification), GetAccessProfileInfoList command (ONVIF Access Rules Service Specification)

**Feature Under Test:** GetAccessProfileInfoList

**WSDL Reference:** accessrules.wsdl

**Test Purpose:** To verify Get Access Profile Info List using Limit.

**Pre-Requisite:** Access Rules Service is received from the DUT.

**Test Configuration:** ONVIF Client and DUT

**Test Procedure:**

1. Start an ONVIF Client.

2. Start the DUT.

3. ONVIF Client gets the service capabilities (out `cap`) by following the procedure mentioned in Annex A.2.

4. ONVIF client invokes `GetAccessProfileInfoList` with parameters
   - Limit := 1
   - StartReference skipped

5. The DUT responds with `GetAccessProfileInfoListResponse` message with parameters
   - NextStartReference = `nextStartReference`
• AccessProfileInfo list =: accessProfileInfoList1

6. If accessProfileInfoList1 contains more AccessProfileInfo items than 1, FAIL the test and skip other steps.

7. If cap.MaxLimit is equal to 1, skip other steps.

8. ONVIF client invokes GetAccessProfileInfoList with parameters
   • Limit := cap.MaxLimit
   • StartReference skipped

9. The DUT responds with GetAccessProfileInfoListResponse message with parameters
   • NextStartReference =: nextStartReference
   • AccessProfileInfo list =: accessProfileInfoList2

10. If accessProfileInfoList2 contains more AccessProfileInfo items than cap.MaxLimit, FAIL the test and skip other steps.

11. If cap.MaxLimit is equal to 2, skip other steps.

12. Set the following:
    • limit := [number between 1 and cap.MaxLimit]

13. ONVIF client invokes GetAccessProfileInfoList with parameters
    • Limit := limit
    • StartReference skipped

14. The DUT responds with GetAccessProfileInfoListResponse message with parameters
    • NextStartReference =: nextStartReference
    • AccessProfileInfo list =: accessProfileInfoList3

15. If accessProfileInfoList3 contains more AccessProfileInfo items than limit, FAIL the test and skip other steps.

Test Result:

PASS –
• DUT passes all assertions.
FAIL –

• DUT did not send `GetAccessProfileInfoListResponse` message.

4.2.3 GET ACCESS PROFILE INFO LIST - START REFERENCE AND LIMIT

Test Case ID: ACCESS_RULES-2-1-3

Feature Under Test: GetAccessProfileInfoList

WSDL Reference: accessrules.wsdl

Test Purpose: To verify Get Access Profile Info List using StartReference and Limit.

Pre-Requisite: Access Rules Service is received from the DUT.

Test Configuration: ONVIF Client and DUT

Test Procedure:

1. Start an ONVIF Client.

2. Start the DUT.

3. ONVIF Client gets the service capabilities (out `cap`) by following the procedure mentioned in Annex A.2.

4. ONVIF client invokes `GetAccessProfileInfoList` with parameters

   • Limit := `cap.MaxLimit`
   • StartReference skipped

5. The DUT responds with `GetAccessProfileInfoListResponse` message with parameters

   • NextStartReference =: `nextStartReference`
   • AccessProfileInfo list =: `accessProfileInfoList1`

6. If `accessProfileInfoList1` contains more AccessProfileInfo items than `cap.MaxLimit`, FAIL the test and skip other steps.

7. Until `nextStartReference` is not null, repeat the following steps:
7.1. ONVIF client invokes \texttt{GetAccessProfileInfoList} with parameters

- \texttt{Limit := cap.MaxLimit}
- \texttt{StartReference := nextStartReference}

7.2. The DUT responds with \texttt{GetAccessProfileInfoListResponse} message with parameters

- \texttt{NextStartReference := nextStartReference}
- \texttt{AccessProfileInfo list := accessProfileInfoListPart}

7.3. If \texttt{accessProfileInfoListPart} contains more AccessProfileInfo items than \texttt{cap.MaxLimit}, FAIL the test and skip other steps.

7.4. Set the following:

\[
\text{accessProfileInfoCompleteList1} := \text{accessProfileInfoCompleteList1} + \text{accessProfileInfoListPart}
\]

8. If \texttt{accessProfileInfoCompleteList1} contains at least two AccessProfileInfo items with equal token, FAIL the test and skip other steps.

9. If \texttt{cap.MaxLimit} is equal to 1, skip other steps.

10. ONVIF client invokes \texttt{GetAccessProfileInfoList} with parameters

- \texttt{Limit := 1}
- \texttt{StartReference skipped}

11. The DUT responds with \texttt{GetAccessProfileInfoListResponse} message with parameters

- \texttt{NextStartReference := nextStartReference}
- \texttt{AccessProfileInfo list := accessProfileInfoCompleteList2}

12. If \texttt{accessProfileInfoCompleteList2} contains more AccessProfileInfo items than 1, FAIL the test and skip other steps.

13. Until \texttt{nextStartReference} is not null, repeat the following steps:

13.1. ONVIF client invokes \texttt{GetAccessProfileInfoList} with parameters

- \texttt{Limit := 1}
- \texttt{StartReference := nextStartReference}
13.2. The DUT responds with `GetAccessProfileInfoListResponse` message with parameters

- NextStartReference = `nextStartReference`
- AccessProfileInfo list = `accessProfileInfoListPart`

13.3. If `accessProfileInfoListPart` contains more AccessProfileInfo items than 1, FAIL the test and skip other steps.

13.4. Set the following:

- `accessProfileInfoCompleteList2` := `accessProfileInfoCompleteList2` + `accessProfileInfoListPart`

14. If `accessProfileInfoCompleteList2` contains at least two AccessProfileInfo item with equal token, FAIL the test and skip other steps.

15. If `accessProfileInfoCompleteList2` does not contain all access profiles from `accessProfileInfoCompleteList1`, FAIL the test and skip other steps.

16. If `accessProfileInfoCompleteList2` contains access profiles other than access profiles from `accessProfileInfoCompleteList1`, FAIL the test and skip other steps.

17. If `cap.MaxLimit` is equal to 2, skip other steps.

18. Set the following:

- `limit` := [number between 1 and `cap.MaxLimit`]

19. ONVIF client invokes `GetAccessProfileInfoList` with parameters

- `Limit` := `limit`
- StartReference skipped

20. The DUT responds with `GetAccessProfileInfoListResponse` message with parameters

- NextStartReference = `nextStartReference`
- AccessProfileInfo list = `accessProfileInfoCompleteList3`

21. If `accessProfileInfoCompleteList3` contains more AccessProfileInfo items than `limit`, FAIL the test and skip other steps.

22. Until `nextStartReference` is not null, repeat the following steps:

22.1. ONVIF client invokes `GetAccessProfileInfoList` with parameters
• Limit := limit

• StartReference := nextStartReference

22.2. The DUT responds with GetAccessProfileInfoListResponse message with parameters

• NextStartReference =: nextStartReference

• AccessProfileInfo list =: accessProfileInfoListPart

22.3. If accessProfileInfoListPart contains more AccessProfileInfo items than limit, FAIL the test and skip other steps.

22.4. Set the following:

• accessProfileInfoCompleteList3 := accessProfileInfoCompleteList3 + accessProfileInfoListPart

23. If accessProfileInfoCompleteList3 contains at least two AccessProfileInfo item with equal token, FAIL the test and skip other steps.

24. If accessProfileInfoCompleteList3 does not contain all access profiles from accessProfileInfoCompleteList1, FAIL the test and skip other steps.

25. If accessProfileInfoCompleteList3 contains access profiles other than access profiles from accessProfileInfoCompleteList1, FAIL the test and skip other steps.

Test Result:

PASS –
• DUT passes all assertions.

FAIL –
• DUT did not send GetAccessProfileInfoListResponse message.

4.2.4 GET ACCESS PROFILE INFO LIST - NO LIMIT

Test Case ID: ACCESS_RULES-2-1-4

Feature Under Test: GetAccessProfileInfoList
WSDL Reference: accessrules.wsdl

Test Purpose: To verify Get Access Profile Info List without using Limit.

Pre-Requisite: Access Rules Service is received from the DUT.

Test Configuration: ONVIF Client and DUT

Test Procedure:

1. Start an ONVIF Client.

2. Start the DUT.

3. ONVIF Client gets the service capabilities (out cap) by following the procedure mentioned in Annex A.2.

4. ONVIF client invokes GetAccessProfileInfoList with parameters
   - Limit skipped
   - StartReference skipped

5. The DUT responds with GetAccessProfileInfoListResponse message with parameters
   - NextStartReference =: nextStartReference
   - AccessProfileInfo list =: accessProfileInfoCompleteList

6. If accessProfileInfoCompleteList contains more AccessProfileInfo items than cap.MaxLimit, FAIL the test and skip other steps.

7. Until nextStartReference is not null, repeat the following steps:

   7.1. ONVIF client invokes GetAccessProfileInfoList with parameters
       - Limit skipped
       - StartReference := nextStartReference

   7.2. The DUT responds with GetAccessProfileInfoListResponse message with parameters
       - NextStartReference =: nextStartReference
       - AccessProfileInfo list =: accessProfileInfoListPart

   7.3. If accessProfileInfoListPart contains more AccessProfileInfo items than cap.MaxLimit, FAIL the test and skip other steps.
7.4. Set the following:

\[
\text{accessProfileInfoCompleteList} := \text{accessProfileInfoCompleteList} + \text{accessProfileInfoListPart}
\]

8. If `accessProfileInfoCompleteList` contains at least two `AccessProfileInfo` items with equal token, FAIL the test.

9. If `accessProfileInfoCompleteList` contains more `AccessProfileInfo` items than `cap.MaxAccessProfiles`, FAIL the test and skip other steps.

**Test Result:**

**PASS** –

- DUT passes all assertions.

**FAIL** –

- DUT did not send `GetAccessProfileInfoListResponse` message.

### 4.2.5 GET ACCESS PROFILE INFO WITH INVALID TOKEN

**Test Case ID:** ACCESS_RULES-2-1-5

**Specification Coverage:** GetAccessProfileInfo command (ONVIF Access Rules Service Specification)

**Feature Under Test:** GetAccessProfileInfo

**WSDL Reference:** accessrules.wsdl

**Test Purpose:** To verify Get Access Profile Info with invalid token.

**Pre-Requisite:** Access Rules Service is received from the DUT.

**Test Configuration:** ONVIF Client and DUT

**Test Procedure:**

1. Start an ONVIF Client.

2. Start the DUT.

3. ONVIF Client retrieves a complete list of access profiles (`accessProfileInfoCompleteList`) by following the procedure mentioned in Annex A.1.

4. Set the following:

- invalidToken := value not equal to any accessProfileInfoCompleteList.token

5. ONVIF client invokes GetAccessProfileInfo with parameters

- Token list := invalidToken

6. The DUT responds with GetAccessProfileInfoResponse message with parameters

- AccessProfileInfo list =: accessProfileInfoList

7. If accessProfileInfoList is not empty, FAIL the test.

8. If accessProfileInfoCompleteList is empty, skip other steps.

9. ONVIF Client gets the service capabilities (out cap) by following the procedure mentioned in Annex A.2.

10. If cap.MaxLimit is less than 2, skip other steps.

11. ONVIF client invokes GetAccessProfileInfo with parameters

- Token[0] := invalidToken

- Token[1] := accessProfileInfoCompleteList[0].token

12. The DUT responds with GetAccessProfileInfoResponse message with parameters

- AccessProfileInfo list =: accessProfileInfoList

13. If accessProfileInfoList is empty, FAIL the test.

14. If accessProfileInfoList contains more than one item, FAIL the test.

15. If accessProfileInfoList[0].token does not equal accessProfileInfoCompleteList[0].token, FAIL the test.

Test Result:

PASS –

- DUT passes all assertions.

FAIL –

- DUT did not send GetAccessProfileInfoResponse message.

4.2.6 GET ACCESS PROFILE INFO - TOO MANY ITEMS

Test Case ID: ACCESS_RULES-2-1-6

Feature Under Test: GetAccessProfileInfo

WSDL Reference: accessrules.wsdl

Test Purpose: To verify Get Access Profile Info in case if there a more items than MaxLimit in request.

Pre-Requisite: Access Rules Service is received from the DUT.

Test Configuration: ONVIF Client and DUT

Test Procedure:

1. Start an ONVIF Client.
2. Start the DUT.
3. ONVIF Client retrieves a complete list of access profiles (out accessProfileInfoCompleteList) by following the procedure mentioned in Annex A.1.
4. ONVIF Client gets the service capabilities (out cap) by following the procedure mentioned in Annex A.2.
5. If accessProfileInfoCompleteList.token items number is less than cap.MaxLimit or equal to cap.MaxLimit, skip other steps.
6. Set the following:
   - tokenList := [subset of accessProfileInfoCompleteList.token values with items number equal to cap.MaxLimit + 1]
7. ONVIF client invokes GetAccessProfileInfo with parameters
   - Token list := tokenList

Test Result:

PASS –
   - DUT passes all assertions.

FAIL –
   - The DUT did not send env:Sender:InvalidArgs:TooManyItems SOAP 1.2 fault
4.3 Access Profile

4.3.1 GET ACCESS PROFILES

Test Case ID: ACCESS_RULES-3-1-1

Feature Under Test: GetAccessProfiles

WSDL Reference: accessrules.wsdl

Test Purpose: To verify Get Access Profiles.

Pre-Requisite: Access Rules Service is received from the DUT.

Test Configuration: ONVIF Client and DUT

Test Procedure:

1. Start an ONVIF Client.
2. Start the DUT.
3. ONVIF Client retrieves a complete list of access profiles (out accessProfileCompleteList) by following the procedure mentioned in Annex A.3.
4. If accessProfileCompleteList is empty, skip other steps.
5. ONVIF Client gets the service capabilities (out cap) by following the procedure mentioned in Annex A.2.
6. Set the following:
   - tokenList := [subset of accessProfileCompleteList.token values with items number equal to cap.MaxLimit]
7. ONVIF client invokes GetAccessProfiles with parameters
   - Token list := tokenList
8. The DUT responds with GetAccessProfilesResponse message with parameters
   - AccessProfile list =: accessProfileList1
9. If `accessProfileList1` does not contain AccessProfile item for each token from `tokenList`, FAIL the test and skip other steps.

10. If `accessProfileList1` contains at least two AccessProfile items with equal token, FAIL the test and skip other steps.

11. If `accessProfileList1` contains other AccessProfile items then listed in `tokenList`, FAIL the test and skip other steps.

12. For each `AccessProfileInfo.token` token from `accessProfileCompleteList` repeat the following steps:

   12.1. ONVIF client invokes `GetAccessProfiles` with parameters

       • `Token[0] := token`

   12.2. The DUT responds with `GetAccessProfilesResponse` message with parameters

       • `AccessProfile list := accessProfileList2`

   12.3. If `accessProfileList2` does not contain only one AccessProfile item with token equal to `token`, FAIL the test and skip other steps.

   12.4. If `accessProfileList2[0]` item does not have equal field values to `accessProfileCompleteList[token = token]` item, FAIL the test and skip other steps.

**Test Result:**

**PASS** –

• DUT passes all assertions.

**FAIL** –

• DUT did not send `GetAccessProfilesResponse` message.

**Note:** If number of items in `accessProfileCompleteList`, less than `cap.MaxLimit`, then all `accessProfileCompleteList.Token` items shall be used for the step 6.

**Note:** The following fields are compared at step 12.4:

• AccessProfile:

  • token

  • Name

  • Description
• AccessPolicy list (ScheduleToken is used as unique key for comparing)
  • ScheduleToken
  • Entity
  • EntityType

4.3.2 GET ACCESS PROFILE LIST - LIMIT

Test Case ID: ACCESS_RULES-3-1-2

Feature Under Test: GetAccessProfileList

WSDL Reference: accessrules.wsdl

Test Purpose: To verify Get Access Profile List using Limit.

Pre-Requisite: Access Rules Service is received from the DUT.

Test Configuration: ONVIF Client and DUT

Test Procedure:

1. Start an ONVIF Client.

2. Start the DUT.

3. ONVIF Client gets the service capabilities (out cap) by following the procedure mentioned in Annex A.2.

4. ONVIF client invokes GetAccessProfileList with parameters

   • Limit := 1
   • StartReference skipped

5. The DUT responds with GetAccessProfileListResponse message with parameters

   • NextStartReference =: nextStartReference
   • AccessProfile list =: accessProfileList1
6. If `accessProfileList1` contains more AccessProfile items than 1, FAIL the test and skip other steps.

7. If `cap.MaxLimit` is equal to 1, skip other steps.

8. ONVIF client invokes `GetAccessProfileList` with parameters
   - `Limit := cap.MaxLimit`
   - `StartReference` skipped

9. The DUT responds with `GetAccessProfileListResponse` message with parameters
   - `NextStartReference =: nextStartReference`
   - `AccessProfile list =: accessProfileList2`

10. If `accessProfileList2` contains more AccessProfile items than `cap.MaxLimit`, FAIL the test and skip other steps.

11. If `cap.MaxLimit` is equal to 2, skip other steps.

12. Set the following:
   - `limit := [number between 1 and cap.MaxLimit]`

13. ONVIF client invokes `GetAccessProfileList` with parameters
    - `Limit := limit`
    - `StartReference` skipped

14. The DUT responds with `GetAccessProfileListResponse` message with parameters
    - `NextStartReference =: nextStartReference`
    - `AccessProfile list =: accessProfileList3`

15. If `accessProfileList3` contains more AccessProfile items than `limit`, FAIL the test and skip other steps.

**Test Result:**

**PASS –**

- DUT passes all assertions.

**FAIL –**
4.3.3 GET ACCESS PROFILE LIST - START REFERENCE AND LIMIT

Test Case ID: ACCESS_RULES-3-1-3

Feature Under Test: GetAccessProfileList

WSDL Reference: accessrules.wsdl

Test Purpose: To verify Get Access Profile List using StartReference and Limit.

Pre-Requisite: Access Rules Service is received from the DUT.

Test Configuration: ONVIF Client and DUT

Test Procedure:

1. Start an ONVIF Client.
2. Start the DUT.
3. ONVIF Client gets the service capabilities (out cap) by following the procedure mentioned in Annex A.2.
4. ONVIF client invokes GetAccessProfileList with parameters
   - Limit := cap.MaxLimit
   - StartReference skipped
5. The DUT responds with GetAccessProfileListResponse message with parameters
   - NextStartReference =: nextStartReference
   - AccessProfile list =: accessProfileCompleteList1
6. If accessProfileCompleteList1 contains more AccessProfile items than cap.MaxLimit, FAIL the test and skip other steps.
7. Until nextStartReference is not null, repeat the following steps:
   7.1. ONVIF client invokes GetAccessProfileList with parameters
• Limit := cap.MaxLimit
• StartReference := nextStartReference

7.2. The DUT responds with GetAccessProfileListResponse message with parameters

• NextStartReference =: nextStartReference
• AccessProfile list =: accessProfileListPart

7.3. If accessProfileListPart contains more AccessProfile items than cap.MaxLimit, FAIL the test and skip other steps.

7.4. Set the following:

• accessProfileCompleteList1 := accessProfileCompleteList1 + accessProfileListPart

8. If accessProfileCompleteList1 contains at least two AccessProfile item with equal token, FAIL the test and skip other steps.

9. If cap.MaxLimit is equal to 1, do the following steps:

9.1. ONVIF Client retrieves a complete list of access profiles (out accessProfileInfoCompleteList) by following the procedure mentioned in Annex A.1.

9.2. If accessProfileCompleteList1 does not contain all access profiles from accessProfileInfoCompleteList, FAIL the test and skip other steps.

9.3. If accessProfileCompleteList1 contains access profiles other than access profiles from accessProfileInfoCompleteList, FAIL the test and skip other steps.

9.4. For each AccessProfileInfo.token token from accessProfileInfoCompleteList repeat the following steps:

9.4.1. If accessProfileCompleteList1[token = token] item does not have equal field values to accessProfileInfoCompleteList[token = token] item, FAIL the test and skip other steps.

9.5. Skip other steps.

10. ONVIF client invokes GetAccessProfileList with parameters

• Limit := 1
• StartReference skipped

11. The DUT responds with GetAccessProfileListResponse message with parameters
12. If `accessProfileCompleteList2` contains more AccessProfile items than 1, FAIL the test and skip other steps.

13. Until `nextStartReference` is not null, repeat the following steps:

13.1. ONVIF client invokes `GetAccessProfileList` with parameters

   - Limit := 1
   - StartReference := `nextStartReference`

13.2. The DUT responds with `GetAccessProfileListResponse` message with parameters

   - NextStartReference := `nextStartReference`
   - Access Profile list := `accessProfileListPart`

13.3. If `accessProfileListPart` contains more AccessProfile items than 1, FAIL the test and skip other steps.

13.4. Set the following:

   - `accessProfileCompleteList2` := `accessProfileCompleteList2` + `accessProfileListPart`

14. If `accessProfileCompleteList2` contains at least two AccessProfile item with equal token, FAIL the test and skip other steps.

15. If `accessProfileCompleteList2` does not contain all access profiles from `accessProfileCompleteList1`, FAIL the test and skip other steps.

16. If `accessProfileCompleteList2` contains access profiles other than access profiles from `accessProfileCompleteList1`, FAIL the test and skip other steps.

17. If `cap.MaxLimit` is equal to 2, do the following steps:

17.1. ONVIF Client retrieves a complete list of access profiles (out `accessProfileInfoCompleteList`) by following the procedure mentioned in Annex A.1.

17.2. If `accessProfileCompleteList2` does not contain all access profiles from `accessProfileInfoCompleteList`, FAIL the test and skip other steps.

17.3. If `accessProfileCompleteList2` contains access profiles other than access profiles from `accessProfileInfoCompleteList`, FAIL the test and skip other steps.
17.4. For each AccessProfileInfo.token token from accessProfileInfoCompleteList repeat the following steps:

17.4.1. If accessProfileCompleteList2[token = token] item does not have equal field values to accessProfileInfoCompleteList[token = token] item, FAIL the test and skip other steps.

17.5. Skip other steps.

18. Set the following:

- limit := [number between 1 and cap.MaxLimit]

19. ONVIF client invokes GetAccessProfileList with parameters

- Limit := limit
- StartReference skipped

20. The DUT responds with GetAccessProfileListResponse message with parameters

- NextStartReference := nextStartReference
- AccessProfile list := accessProfileCompleteList3

21. If accessProfileCompleteList3 contains more AccessProfile items than limit, FAIL the test and skip other steps.

22. Until nextStartReference is not null, repeat the following steps:

22.1. ONVIF client invokes GetAccessProfileList with parameters

- Limit := limit
- StartReference := nextStartReference

22.2. The DUT responds with GetAccessProfileListResponse message with parameters

- NextStartReference := nextStartReference
- AccessProfile list := accessProfileListPart

22.3. If accessProfileListPart contains more AccessProfile items than limit, FAIL the test and skip other steps.

22.4. Set the following:

- accessProfileCompleteList3 := accessProfileCompleteList3 + accessProfileListPart
23. If `accessProfileCompleteList3` contains at least two `AccessProfile` item with equal token, FAIL the test and skip other steps.

24. If `accessProfileCompleteList3` does not contain all access profiles from `accessProfileCompleteList1`, FAIL the test and skip other steps.

25. If `accessProfileCompleteList3` contains access profiles other than access profiles from `accessProfileCompleteList1`, FAIL the test and skip other steps.

26. ONVIF Client retrieves a complete list of access profiles (out `accessProfileInfoCompleteList`) by following the procedure mentioned in Annex A.1.

27. If `accessProfileCompleteList3` does not contain all access profiles from `accessProfileInfoCompleteList`, FAIL the test and skip other steps.

28. If `accessProfileCompleteList3` contains access profiles other than access profiles from `accessProfileInfoCompleteList`, FAIL the test and skip other steps.

29. For each `AccessProfileInfo.token` from `accessProfileInfoCompleteList` repeat the following steps:

   29.1. If `accessProfileCompleteList3[token = token]` item does not have equal field values to `accessProfileInfoCompleteList[token = token]` item, FAIL the test and skip other steps.

Test Result:

PASS –

• DUT passes all assertions.

FAIL –

• DUT did not send `GetAccessProfileListResponse` message.

Note: The following fields are compared at step 29.1:

• AccessProfileInfo:
  
  • token
  
  • Name
  
  • Description

4.3.4 GET ACCESS PROFILE LIST - NO LIMIT

Test Case ID: ACCESS_RULES-3-1-4

**Feature Under Test:** GetAccessProfileList

**WSDL Reference:** accessrules.wsdl

**Test Purpose:** To verify Get Access Profile List without using Limit.

**Pre-Requisite:** Access Rules Service is received from the DUT.

**Test Configuration:** ONVIF Client and DUT

**Test Procedure:**

1. Start an ONVIF Client.

2. Start the DUT.

3. ONVIF Client gets the service capabilities (out `cap`) by following the procedure mentioned in Annex A.2.

4. ONVIF client invokes **GetAccessProfileList** with parameters
   - Limit skipped
   - StartReference skipped

5. The DUT responds with **GetAccessProfileListResponse** message with parameters
   - NextStartReference := `nextStartReference`
   - AccessProfile list := `accessProfileCompleteList`

6. If `accessProfileCompleteList` contains more AccessProfile items than `cap.MaxLimit`, FAIL the test and skip other steps.

7. Until `nextStartReference` is not null repeat, the following steps:

   7.1. ONVIF client invokes **GetAccessProfileList** with parameters
       - Limit skipped
       - StartReference := `nextStartReference`

   7.2. The DUT responds with **GetAccessProfileListResponse** message with parameters
       - NextStartReference := `nextStartReference`
• AccessProfile list =: accessProfileListPart

7.3. If accessProfileListPart contains more AccessProfile items than cap.MaxLimit, FAIL the test and skip other steps.

7.4. Set the following:
   • accessProfileCompleteList := accessProfileCompleteList + accessProfileListPart

8. If accessProfileCompleteList contains at least two AccessProfile item with equal token, FAIL the test.

9. ONVIF Client retrieves a complete list of access profiles (out accessProfileInfoCompleteList) by following the procedure mentioned in Annex A.1.

10. If accessProfileCompleteList does not contain all access profiles from accessProfileInfoCompleteList, FAIL the test and skip other steps.

11. If accessProfileCompleteList contains access profiles other than access profiles from accessProfileInfoCompleteList, FAIL the test and skip other steps.

12. For each AccessProfileInfo.token token from accessProfileInfoCompleteList repeat the following steps:

   12.1. If accessProfileCompleteList[token = token] item does not have equal field values to accessProfileInfoCompleteList[token = token] item, FAIL the test and skip other steps.

Test Result:

PASS –

• DUT passes all assertions.

FAIL –

• DUT did not send GetAccessProfileListResponse message.

Note: The following fields are compared at step 12.1:

• AccessProfileInfo:
  • token
  • Name
  • Description
4.3.5 CREATE ACCESS PROFILE

**Test Case ID:** ACCESS_RULES-3-1-5

**Feature Under Test:** CreateAccessProfile

**WSDL Reference:** accessrules.wsdl and event.wsdl

**Test Purpose:** To verify Create Access Profiles with empty token and to verify tns1:Configuration/AccessProfile/Changed event generation.

**Pre-Requisite:** Access Rules Service is received from the DUT. Schedule Service is received from the DUT. Event Service is received from the DUT. The DUT shall have enough free storage capacity for one additional Access Profile.

**Test Configuration:** ONVIF Client and DUT

**Test Procedure:**

1. Start an ONVIF Client.

2. Start the DUT.

3. ONVIF Client retrieves a complete list of access profiles (out `accessProfileCompleteList1`) by following the procedure mentioned in Annex A.3.

4. ONVIF Client checks free storage for additional Access Profile (in `accessProfileCompleteList1`, out `accessProfileToRestore`) by following the procedure mentioned in Annex A.7.

5. If Access Control service is supported by the DUT, ONVIF Client retrieves a complete list of access point information (out `accessPointInfoCompleteList`) by following the procedure mentioned in Annex A.5.

6. If `accessPointInfoCompleteList` is not empty:

   6.1. ONVIF Client retrieves a complete list of schedules (out `scheduleCompleteList`) by following the procedure mentioned in Annex A.4.

6.2. If `scheduleCompleteList` is not empty:

   6.2.1. Set `scheduleToken := scheduleCompleteList[0].token`
6.2.2. Go to step 7.

6.3. ONVIF Client gets the service capabilities (out cap) by following the procedure mentioned in Annex A.12

6.4. ONVIF Client generates appropriate iCalendar value for the Schedule.Standard field (in cap, out scheduleiCalendarValue) by following the procedure mentioned in Annex A.14.

6.5. If cap.SpecialDaysSupported is equal to true, ONVIF Client creates SpecialDayGroup (out specialDayGroupToken) by following the procedure mentioned in Annex A.15.

6.6. ONVIF Client creates Schedule with Schedule token (out scheduleToken), with iCalendar value of the Schedule.Standard field (in scheduleiCalendarValue) and with SpecialDayGroupToken (in specialDayGroupToken) if Special Days is supported by the DUT by following the procedure mentioned in Annex A.16.

7. ONVIF Client invokes CreatePullPointSubscription with parameters

   • Filter.TopicExpression := "tns1:Configuration/AccessProfile/Changed"

8. The DUT responds with a CreatePullPointSubscriptionResponse message with parameters

   • SubscriptionReference =: s
   • CurrentTime =: ct
   • TerminationTime =: tt

9. ONVIF client invokes CreateAccessProfile with parameters

   • AccessProfile.token := ""
   • AccessProfile.Name := "Test Access Profile"
   • AccessProfile.Description := "Test Description"
   • AccessProfile.AccessPolicy is skipped if accessPointInfoCompleteList is empty
   • AccessProfile.AccessPolicy[0].ScheduleToken := scheduleToken
   • AccessProfile.AccessPolicy[0].Entity := accessPointInfoCompleteList[0].token
   • AccessProfile.AccessPolicy[0].EntityType skipped
   • AccessProfile.AccessPolicy[0].Extension skipped
10. The DUT responds with `CreateAccessProfileResponse` message with parameters
   - Token =: `accessProfileToken`

11. If `accessProfileCompleteList1` contains item with token equal to `accessProfileToken`, FAIL the test and go to Step 24.

12. Until `timeout1` timeout expires, repeat the following steps:
   12.1. ONVIF Client waits for time \( t := \min\{\frac{(tt-cf)}{2}, 1\text{ second}\} \).
   12.2. ONVIF Client invokes `PullMessages` to the subscription endpoint \( s \) with parameters
       - Timeout := PT60S
       - MessageLimit := 1
   12.3. The DUT responds with `PullMessagesResponse` message with parameters
       - CurrentTime =: \( ct \)
       - TerminationTime =: \( tt \)
       - NotificationMessage =: \( m \)
   12.4. If \( m \) is not null and the TopicExpression item in \( m \) is not equal to "tns1:Configuration/AccessProfile/Changed", FAIL the test and go to the step 24.
   12.5. If \( m \) is not null and the AccessProfileToken source simple item in \( m \) is not equal to `accessProfileToken`, go to the step 24.
   12.6. If \( m \) is not null and the AccessProfileToken source simple item in \( m \) is equal to `accessProfileToken`, go to the step 14.

13. If `timeout1` timeout expires for step 12 without Notification with AccessProfileToken source simple item equal to `accessProfileToken`, FAIL the test and go to the step 24.

14. ONVIF Client retrieves an access profile (in `accessProfileToken`, out `accessProfileList`) by following the procedure mentioned in Annex A.8.

15. If `accessProfileList` contains more or less than one `AccessProfile` item, FAIL the test and go to step 24.

16. If `accessProfileList[0]` item does not have equal field values to values from step 9, FAIL the test and go Step 24.
17. ONVIF Client retrieves an access profile info (in `accessProfileToken`, out `accessProfileInfoList`) by following the procedure mentioned in Annex A.9.

18. If `accessProfileInfoList` contains more or less than one `AccessProfile` item, FAIL the test and go to step 24.

19. If `accessProfileInfoList[0]` item does not have equal field values to values from step 9, FAIL the test and go Step 24.

20. ONVIF Client retrieves a complete list of access profiles (out `accessProfileInfoCompleteList`) by following the procedure mentioned in Annex A.1.

21. If `accessProfileInfoCompleteList` does not have `accessProfileInfo[token:=accessProfileToken]` item equal field values to values from step 9, FAIL the test and go Step 24.

22. ONVIF Client retrieves a complete list of access profiles (out `accessProfileCompleteList2`) by following the procedure mentioned in Annex A.3.

23. If `accessProfileCompleteList2` does not have `accessProfile[token:=accessProfileToken]` item equal field values to values from step 9, FAIL the test and go to Step 24.

24. ONVIF Client deletes the Access Profile (in `accessProfileToken`) by following the procedure mentioned in Annex A.6 to restore DUT configuration.

25. If there was access profile deleted at Step 4, restore it (in `accessProfileToRestore`) by following the procedure mentioned in Annex A.10 to restore DUT configuration.

26. ONVIF Client deletes the Schedule (in `scheduleToken`) by following the procedure mentioned in Annex A.17 to restore DUT configuration.

27. If SpecialDayGroup was created at step 6.5, ONVIF Client deletes the SpecialDayGroup (in `specialDayGroupToken`) by following the procedure mentioned in Annex A.18 to restore DUT configuration.

28. ONVIF Client sends an `Unsubscribe` to the subscription endpoint s.

29. The DUT responds with `UnsubscribeResponse` message.

**Test Result:**

**PASS** –

- DUT passes all assertions.

**FAIL** –

- The DUT did not send `CreateAccessProfilesResponse` message.
• The DUT did not send `CreatePullpointSubscriptionResponse` message.

• The DUT did not send `PullMessagesResponse` message.

• The DUT did not send `UnsubscribeResponse` message.

**Note:** `timeout1` will be taken from Operation Delay field of ONVIF Device Test Tool.

**Note:** ONVIF Client skips whole `AccessProfile.AccessPolicy` field at step 9, if `AccessProfile.AccessPolicy[0].ScheduleToken` and `AccessProfile.AccessPolicy[0].Entity` field are skipped.

**Note:** The following fields are compared at steps 15, 21:

- `AccessProfile`:
  - `token`
  - `Name`
  - `Description`
  - `AccessPolicy`
    - `ScheduleToken`
    - `Entity`
    - `EntityType`

**Note:** The following fields are compared at steps 17, 19:

- `AccessProfileInfo`:
  - `token`
  - `Name`
  - `Description`

### 4.3.6 MODIFY ACCESS PROFILE

**Test Case ID:** ACCESS_RULES-3-1-7

Feature Under Test: ModifyAccessProfile

WSDL Reference: accessrules.wsdl and event.wsdl

Test Purpose: To verify Modify Access Profile and to verify tns1:Configuration/AccessProfile/Changed event generation.

Pre-Requisite: Access Rules Service is received from the DUT. Schedule Service is received from the DUT. Event Service is received from the DUT. The DUT shall have enough free storage capacity for one additional Access Profile.

Test Configuration: ONVIF Client and DUT

Test Procedure:

1. Start an ONVIF Client.
2. Start the DUT.
3. ONVIF Client retrieves a complete list of access profiles (out accessProfileCompleteList1) by following the procedure mentioned in Annex A.3.
4. ONVIF Client checks free storage for additional Access Profile (in accessProfileCompleteList1, out accessProfileToRestore) by following the procedure mentioned in Annex A.7.
5. ONVIF Client retrieves a complete list of schedules (out scheduleCompleteList) by following the procedure mentioned in Annex A.4.
6. If Access Control service is supported by the DUT, ONVIF Client retrieves a complete list of access point information (out accessPointInfoCompleteList) by following the procedure mentioned in Annex A.5.
7. ONVIF client creates access profile (in scheduleCompleteList, accessPointInfoCompleteList, out accessProfileToken) by following the procedure mentioned in Annex A.11.
8. ONVIF Client invokes CreatePullPointSubscription with parameters
   - Filter.TopicExpression := "tns1:Configuration/AccessProfile/Changed"
9. The DUT responds with a CreatePullPointSubscriptionResponse message with parameters
   - SubscriptionReference =: s
   - CurrentTime =: ct
10. ONVIF client invokes ModifyAccessProfile with parameters

- AccessProfile.token := accessProfileToken
- AccessProfile.Name := "Test Access Profile 2"
- AccessProfile.Description := "Test Description 2"
- AccessProfile.AccessPolicy is skipped if scheduleCompleteList or accessPointInfoCompleteList is empty
- AccessProfile.AccessPolicy[0].ScheduleToken := scheduleCompleteList[0].token
- AccessProfile.AccessPolicy[0].Entity := accessPointInfoCompleteList[0].token
- AccessProfile.AccessPolicy[0].EntityType skipped
- AccessProfile.AccessPolicy[0].Extension skipped
- AccessProfile.Extension skipped

11. The DUT responds with empty ModifyAccessProfileResponse message.

12. Until timeout1 timeout expires, repeat the following steps:

12.1. ONVIF Client waits for time $t := \min\{\frac{tt-ct}{2}, 1 \text{ second}\}$.

12.2. ONVIF Client invokes PullMessages to the subscription endpoint $s$ with parameters

- Timeout := PT60S
- MessageLimit := 1

12.3. The DUT responds with PullMessagesResponse message with parameters

- CurrentTime := $ct$
- TerminationTime := $tt$
- NotificationMessage := $m$

12.4. If $m$ is not null and the TopicExpression item in $m$ is not equal to "tns1:Configuration/AccessProfile/Changed", FAIL the test and go to the step 17.

12.5. If $m$ is not null and the AccessProfileToken source simple item in $m$ is not equal to accessProfileToken, go to the step 17.
12.6. If \( m \) is not null and the AccessProfileToken source simple item in \( m \) is equal to \( \text{accessProfileToken} \), go to the step 17.

13. If \( \text{timeout1} \) timeout expires for step 12 without Notification with AccessProfileToken source simple item equal to \( \text{accessProfileToken} \), FAIL the test and go to the step 17.

14. ONVIF Client retrieves an access profile (in \( \text{accessProfileToken} \), out \( \text{accessProfileList} \)) by following the procedure mentioned in Annex A.8.

15. If \( \text{accessProfileList} \) contains more or less than one \( \text{AccessProfile} \) item, FAIL the test and go to step 17.

16. If \( \text{accessProfileList}[0] \) item does not have equal field values to values from step 10, FAIL the test and go Step 17.

17. ONVIF Client deletes the Access Profile (in \( \text{accessProfileToken} \)) by following the procedure mentioned in Annex A.6 to restore DUT configuration.

18. If there was access profile deleted at Step 4, restore it (in \( \text{accessProfileToRestore} \)) by following the procedure mentioned in Annex A.10 to restore DUT configuration.

19. ONVIF Client sends an \text{Unsubscribe} to the subscription endpoint \( s \).

20. The DUT responds with \text{UnsubscribeResponse} message.

\textbf{Test Result:}

\textbf{PASS –}

\begin{itemize}
  \item DUT passes all assertions.
\end{itemize}

\textbf{FAIL –}

\begin{itemize}
  \item The DUT did not send \text{ModifyAccessProfilesResponse} message.
  \item The DUT did not send \text{CreatePullpointSubscriptionResponse} message.
  \item The DUT did not send \text{PullMessagesResponse} message.
  \item The DUT did not send \text{UnsubscribeResponse} message.
\end{itemize}

\textbf{Note:} \( \text{timeout1} \) will be taken from Operation Delay field of ONVIF Device Test Tool.

\textbf{Note:} The following fields are compared at step 16:

\begin{itemize}
  \item AccessProfile:
    \begin{itemize}
      \item token
    \end{itemize}
\end{itemize}
• Name
• Description
• AccessPolicy
  • ScheduleToken
• Entity
  • EntityType (skipped and "tac:AccessPointInfo" means the same, where tac is the namespace of the access control service: "http://www.onvif.org/ver10/accesscontrol/wsdl")

4.3.7 DELETE ACCESS PROFILE

Test Case ID: ACCESS_RULES-3-1-8

Feature Under Test: DeleteAccessProfile

WSDL Reference: accessrules.wsdl and event.wsdl

Test Purpose: To verify Delete Access Profile and to verify tns1:Configuration/AccessProfile/Removed event generation.

Pre-Requisite: Access Rules Service is received from the DUT. Schedule Service is received from the DUT. Event Service is received from the DUT. The DUT shall have enough free storage capacity for one additional Access Profile.

Test Configuration: ONVIF Client and DUT

Test Procedure:

1. Start an ONVIF Client.
2. Start the DUT.
3. ONVIF Client retrieves a complete list of access profiles (out accessProfileCompleteList1) by following the procedure mentioned in Annex A.3.
4. ONVIF Client checks free storage for additional Access Profile (in accessProfileCompleteList1, out accessProfileToRestore) by following the procedure mentioned in Annex A.7.
5. ONVIF Client retrieves a complete list of schedules (out `scheduleCompleteList`) by following the procedure mentioned in Annex A.4.

6. If Access Control service is supported by the DUT, ONVIF Client retrieves a complete list of access point information (out `accessPointInfoCompleteList`) by following the procedure mentioned in Annex A.5.

7. ONVIF client creates access profile (in `scheduleCompleteList`, `accessPointInfoCompleteList`, out `accessProfileToken`) by following the procedure mentioned in Annex A.11.

8. ONVIF Client invokes `CreatePullPointSubscription` with parameters
   - Filter.TopicExpression := "tns1:Configuration/AccessProfile/Removed"

9. The DUT responds with a `CreatePullPointSubscriptionResponse` message with parameters
   - SubscriptionReference := s
   - CurrentTime := ct
   - TerminationTime := tt

10. ONVIF client invokes `DeleteAccessProfile` with parameters
    - Token := accessProfileToken

11. The DUT responds with empty `DeleteAccessProfileResponse` message.

12. Until `timeout1` timeout expires, repeat the following steps:
    12.1. ONVIF Client waits for time \( t := \min\{\frac{tt-ct}{2}, 1 \text{ second}\} \).
    12.2. ONVIF Client invokes `PullMessages` to the subscription endpoint s with parameters
        - Timeout := PT60S
        - MessageLimit := 1
    12.3. The DUT responds with `PullMessagesResponse` message with parameters
        - CurrentTime := ct
        - TerminationTime := tt
        - NotificationMessage := m
12.4. If \( m \) is not null and the TopicExpression item in \( m \) is not equal to "tns1:Configuration/AccessProfile/Removed", FAIL the test and go to the step 25.

12.5. If \( m \) is not null and the AccessProfileToken source simple item in \( m \) is not equal to \( \text{accessProfileToken} \), go to the step 23.

12.6. If \( m \) is not null and the AccessProfileToken source simple item in \( m \) is equal to \( \text{accessProfileToken} \), go to the step 14.

13. If \( \text{timeout1} \) timeout expires for step 12 without Notification with AccessProfileToken source simple item equal to \( \text{accessProfileToken} \), FAIL the test and go to the step 23.

14. ONVIF Client retrieves an access profile (in \( \text{accessProfileToken} \), out \( \text{accessProfileList} \)) by following the procedure mentioned in Annex A.8.

15. If \( \text{accessProfileList} \) is not empty, FAIL the test and go Step 23.

16. ONVIF Client retrieves an access profile info (in \( \text{accessProfileToken} \), out \( \text{accessProfileInfo} \)) by following the procedure mentioned in Annex A.9.

17. If \( \text{accessProfileInfo} \) is not empty, FAIL the test and go Step 23.

18. ONVIF Client retrieves a complete list of access profiles info (out \( \text{accessProfileInfoCompleteList} \)) by following the procedure mentioned in Annex A.1.

19. If \( \text{accessProfileInfoCompleteList} \) have \( \text{accessProfileInfo} \) item with token equal to \( \text{accessProfileToken} \), FAIL the test and go step 23.

20. ONVIF Client retrieves a complete list of access profiles (out \( \text{accessProfileCompleteList2} \)) by following the procedure mentioned in Annex A.3.

21. If there was access profile deleted at step 4:

   • \( \text{accessProfileCompleteList1} := \text{accessProfileCompleteList1} \text{ without accessProfileToRestore} \)

22. If \( \text{accessProfileCompleteList2} \) is not equal to \( \text{accessProfileCompleteList1} \), FAIL the test and go to step 23.

23. If there was access profile deleted at Step 4, restore it (in \( \text{accessProfileToRestore} \)) by following the procedure mentioned in Annex A.10 to restore DUT configuration.

24. ONVIF Client sends an Unsubscribe to the subscription endpoint \( s \).

25. The DUT responds with UnsubscribeResponse message.

Test Result:
PASS –
  • DUT passes all assertions.

FAIL –
  • The DUT did not send `DeleteAccessProfilesResponse` message.
  • The DUT did not send `CreatePullpointSubscriptionResponse` message.
  • The DUT did not send `PullMessagesResponse` message.
  • The DUT did not send `UnsubscribeResponse` message.

Note: `timeout1` will be taken from Operation Delay field of ONVIF Device Test Tool.

4.3.8 GET ACCESS PROFILES WITH INVALID TOKEN

**Test Case ID:** ACCESS_RULES-3-1-9

**Feature Under Test:** GetAccessProfiles

**WSDL Reference:** accessrules.wsdl

**Test Purpose:** To verify Get Access Profiles with invalid Token.

**Pre-Requisite:** Access Rules Service is received from the DUT.

**Test Configuration:** ONVIF Client and DUT

**Test Procedure:**

1. Start an ONVIF Client.
2. Start the DUT.
3. ONVIF Client retrieves a complete list of access profiles (out `accessProfileInfoCompleteList`) by following the procedure mentioned in Annex A.1.
4. Set the following:
   • `invalidToken` := value not equal to any `accessProfileInfoCompleteList.token`
5. ONVIF client invokes `GetAccessProfiles` with parameters
   • Token list := `invalidToken`
6. The DUT responds with GetAccessProfilesResponse message with parameters
   • AccessProfile list =: accessProfilesList

7. If accessProfilesList is not empty, FAIL the test.

8. If accessProfileInfoCompleteList is empty, skip other steps.

9. ONVIF Client gets the service capabilities (out cap) by following the procedure mentioned in Annex A.2.

10. If cap.MaxLimit is less than 2, skip other steps.

11. ONVIF client invokes GetAccessProfiles with parameters
    • Token[0]:= invalidToken
    • Token[1]:= accessProfileInfoCompleteList[0].token

12. The DUT responds with GetAccessProfilesResponse message with parameters
    • AccessProfileInfo list =: accessProfilesList

13. If accessProfilesList is empty, FAIL the test.

14. If accessProfilesList contains more than one item, FAIL the test.

15. If accessProfilesList[0].token does not equal to accessProfileInfoCompleteList[0].token, FAIL the test.

Test Result:

PASS –
   • DUT passes all assertions.

FAIL –
   • DUT did not send GetAccessProfilesResponse message.

4.3.9 GET ACCESS PROFILES - TOO MANY ITEMS

Test Case ID: ACCESS_RULES-3-1-10

Feature Under Test: GetAccessProfiles
WSDL Reference: accessrules.wsdl

Test Purpose: To verify Get Access Profiles in case if there are more items than MaxLimit in request.

Pre-Requisite: Access Rules Service is received from the DUT.

Test Configuration: ONVIF Client and DUT

Test Procedure:

1. Start an ONVIF Client.
2. Start the DUT.
3. ONVIF Client retrieves a complete list of access profiles (out accessProfileCompleteList) by following the procedure mentioned in Annex A.3.
4. ONVIF Client gets the service capabilities (out cap) by following the procedure mentioned in Annex A.2.
5. If accessProfileCompleteList.token items number is less than cap.MaxLimit or equal to cap.MaxLimit, skip other steps.
6. Set the following:
   - tokenList := [subset of accessProfileInfoCompleteList.token values with items number equal to cap.MaxLimit + 1]
7. ONVIF client invokes GetAccessProfiles with parameters
   - Token list := tokenList

Test Result:

PASS –
   - DUT passes all assertions.

FAIL –
   - The DUT did not send env:Sender|ter:InvalidArgs|ter:TooManyItems SOAP 1.2 fault.

4.3.10 CREATE ACCESS PROFILE - NOT EMPTY ACCESS PROFILE TOKEN

Test Case ID: ACCESS_RULES-3-1-11

**Feature Under Test:** CreateAccessProfile

**WSDL Reference:** accessrules.wsdl

**Test Purpose:** To verify Create Access Profiles with not empty token.

**Pre-Requisite:** Access Rules Service is received from the DUT. The DUT shall have enough free storage capacity for one additional Access Profile.

**Test Configuration:** ONVIF Client and DUT

**Test Procedure:**

1. Start an ONVIF Client.
2. Start the DUT.
3. ONVIF client invokes CreateAccessProfile with parameters
   - AccessProfile.token := "AccessProfileToken"
   - AccessProfile.Name := "Test Access Profile"
   - AccessProfile.Description := "Test Description"
   - AccessProfile.AccessPolicy is skipped

**Test Result:**

**PASS –**
- DUT passes all assertions.

**FAIL –**
- The DUT did not send env:Sender|ter:InvalidArgs SOAP 1.2 fault.

**4.3.11 CREATE ACCESS PROFILE - MULTIPLE SCHEDULES NOT SUPPORTED**

**Test Case ID:** ACCESS_RULES-3-1-12

Feature Under Test: CreateAccessProfile

WSDL Reference: accessrules.wsdl

Test Purpose: To verify Create Access Profiles with several access policies specifying different schedules for the same access point when MultipleSchedulesPerAccessPointSupported is not Supported.

Pre-Requisite: Access Rules Service is received from the DUT. Schedule Service is received from the DUT. The DUT shall have enough free storage capacity for one additional Access Profile.

Test Configuration: ONVIF Client and DUT

Test Procedure:

1. Start an ONVIF Client.

2. Start the DUT.

3. ONVIF Client gets the service capabilities (out cap) by following the procedure mentioned in Annex A.2.

4. If cap.MultipleSchedulesPerAccessPointSupported is equal to true, skip other steps.

5. ONVIF Client retrieves a complete list of schedules (out scheduleCompleteList) by following the procedure mentioned in Annex A.4.

6. If scheduleCompleteList contains less than two schedules, skip other steps.

7. If Access Control service is supported by the DUT, ONVIF Client retrieves a complete list of access point information (out accessPointInfoCompleteList) by following the procedure mentioned in Annex A.5.

8. If accessPointInfoCompleteList is empty, skip other steps.

9. ONVIF client invokes CreateAccessProfile with parameters

   • AccessProfile.token := ""
   • AccessProfile.Name := "Test Access Profile"
   • AccessProfile.Description := "Test Description"
   • AccessProfile.AccessPolicy[0].ScheduleToken := scheduleCompleteList[0].token
• AccessProfile.AccessPolicy[0].Entity := accessPointInfoCompleteList[0].token

• AccessProfile.AccessPolicy[0].EntityType skipped

• AccessProfile.AccessPolicy[0].Extension skipped

• AccessProfile.AccessPolicy[1].Entity := accessPointInfoCompleteList[0].token

• AccessProfile.AccessPolicy[1].EntityType skipped

• AccessProfile.AccessPolicy[1].Extension skipped

• AccessProfile.Extension skipped

10. The DUT returns env:Sender\ter:CapabilityViolated \ter:MultipleSchedulesPerAccessPointSupported SOAP 1.2 fault.

Test Result:

PASS –

• DUT passes all assertions.

FAIL –

• The DUT did not send env:Sender\ter:CapabilityViolated \ter:MultipleSchedulesPerAccessPointSupported SOAP 1.2 fault

Note: If the DUT sends other SOAP 1.2 fault message than specified, log WARNING message, and PASS the test.

4.3.12 MODIFY ACCESS PROFILE WITH INVALID TOKEN

Test Case ID: ACCESS_RULES-3-1-13

Feature Under Test: ModifyAccessProfile

WSDL Reference: accessrules.wsdl

Test Purpose: To verify Modify Access Profile with invalid Access Profile token.

Pre-Requisite: Access Rules Service is received from the DUT.
Test Configuration: ONVIF Client and DUT

Test Procedure:

1. Start an ONVIF Client.

2. Start the DUT.

3. ONVIF Client retrieves a complete list of access profile info (out accessProfileInfoCompleteList) by following the procedure mentioned in Annex A.1.

4. Set the following:
   - invalidToken := value not equal to any accessProfileInfoCompleteList.token

5. ONVIF client invokes ModifyAccessProfile with parameters
   - AccessProfile.token := invalidToken
   - AccessProfile.Name := "Test Access Profile"
   - AccessProfile.Description := "Test Description"
   - AccessProfile.AccessPolicy is skipped

Test Result:

PASS –
   - DUT passes all assertions.

FAIL –
   - DUT did not send env:Sender:ter:InvalidArgVal:ter:NotFound SOAP 1.2 fault

Note: If the DUT sends other SOAP 1.2 fault message than specified, log WARNING message, and PASS the test.

4.3.13  DELETE ACCESS PROFILE WITH INVALID TOKEN

Test Case ID: ACCESS_RULES-3-1-14

Feature Under Test: DeleteAccessProfile

WSDL Reference: accessrules.wsdl
Test Purpose: To verify Delete Access Profile with invalid Access Profile token.

Pre-Requisite: Access Rules Service is received from the DUT.

Test Configuration: ONVIF Client and DUT

Test Procedure:

1. Start an ONVIF Client.
2. Start the DUT.
3. ONVIF Client retrieves a complete list of access profile info (out accessProfileInfoCompleteList) by following the procedure mentioned in Annex A.1.
4. Set the following:
   - invalidToken := value not equal to any accessProfileInfoCompleteList.token
5. ONVIF client invokes DeleteAccessProfile with parameters
   - Token =: accessProfileToken

Test Result:

PASS –
- DUT passes all assertions.

FAIL –
- The DUT did not send env:Sender:InvalidArgVal:NotFound SOAP 1.2 fault

Note: If the DUT sends other SOAP 1.2 fault message than specified, log WARNING message, and PASS the test.

4.3.14 SET NEW ACCESS PROFILE

Test Case ID: ACCESS_RULES-3-1-15

Feature Under Test: SetAccessProfile, tns1:Configuration/AccessProfile/Changed

WSDL Reference: accessrules.wsdl and event.wsdl
**Test Purpose:** To verify Create Access Profiles using SetAccessProfile command and to verify tns1:Configuration/AccessProfile/Changed event generation.

**Pre-Requisite:** Access Rules Service is received from the DUT. Schedule Service is received from the DUT. Event Service is received from the DUT. Client Supplied Token is supported by the DUT. The DUT shall have enough free storage capacity for one additional Access Profile.

**Test Configuration:** ONVIF Client and DUT

**Test Procedure:**

1. Start an ONVIF Client.
2. Start the DUT.
3. ONVIF Client retrieves complete list of access profiles by following the procedure mentioned in Annex A.3 with the following input and output parameters
   - out initialAccessProfileCompleteList - access profile complete list
4. ONVIF Client checks free storage for additional access profile by following the procedure mentioned in Annex A.7 with the following input and output parameters
   - in initialAccessProfileCompleteList - access profile complete list
   - out accessProfileToRestore - removed access profile
5. If Access Control service is supported by the DUT:
   5.1. ONVIF Client retrieves complete list of access point information by following the procedure mentioned in Annex A.5 with the following input and output parameters
      - out accessPointInfoCompleteList - access point info complete list
6. If accessPointInfoCompleteList is not empty:
   6.1. ONVIF Client retrieves complete list of schedules by following the procedure mentioned in Annex A.4 with the following input and output parameters
      - out initialScheduleCompleteList - schedule complete list
6.2. If scheduleCompleteList is not empty:
   6.2.1. Set scheduleToken:= scheduleCompleteList[0].token
   6.2.2. Go to step 7.
6.3. ONVIF Client retrieves Schedule Service Capabilities by following the procedure mentioned in Annex A.12 with the following input and output parameters
• out \textit{cap} - Schedule Service capabilities

6.4. ONVIF Client generates appropriate iCalendar value for the Schedule.Standard field by following the procedure mentioned in Annex A.14 with the following input and output parameters

• in \textit{cap} - Schedule Service capabilities

• out \textit{scheduleiCalendarValue} - iCalendar value for the Schedule.Standard field

6.5. If \textit{cap.SpecialDaysSupported} = true:

6.5.1. ONVIF Client creates special day group by following the procedure mentioned in Annex A.15 with the following input and output parameters

• out \textit{specialDayGroupToken} - token of new special day group

6.6. ONVIF Client creates schedule by following the procedure mentioned in Annex A.16 with the following input and output parameters

• out \textit{scheduleToken} - token of new schedule

• in \textit{scheduleiCalendarValue} - iCalendar value for the Schedule.Standard field

• in \textit{specialDayGroupToken} - special day group token

7. Set \textit{accessProfileToken} := token that differs from tokens listed in \textit{initialAccessProfileCompleteList}.

8. ONVIF Client creates PullPoint subscription for the specified topic by following the procedure mentioned in Annex A.19 with the following input and output parameters

• in \textit{tns1:Configuration/AccessProfile/Changed} - Notification Topic

• out \textit{s} - Subscription reference

• out \textit{currentTime} - current time for the DUT

• out \textit{terminationTime} - Subscription termination time

9. Set \textit{accessProfile} :=

• AccessProfile.token := \textit{accessProfileToken}

• AccessProfile.Name := "Test Access Profile"

• AccessProfile.Description := "Test Description"
• If `accessPointInfoCompleteList` contains at least one item:
  
  • `AccessProfile.AccessPolicy[0].ScheduleToken := scheduleToken`
  
  • `AccessProfile.AccessPolicy[0].Entity := accessPointInfoCompleteList[0].token`
  
  • `AccessProfile.AccessPolicy[0].EntityType` is skipped
  
  • `AccessProfile.AccessPolicy[0].Extension` is skipped

  otherwise:

  • `AccessProfile.AccessPolicy` is skipped
  
  • `AccessProfile.Extension` is skipped

10. ONVIF client invokes `SetAccessProfile` request with parameters

  • `AccessProfile := accessProfile`

11. The DUT responds with `SetAccessProfileResponse` message.

12. ONVIF Client retrieves and checks `tns1:Configuration/AccessProfile/Changed` event for the specified Schedule token by following the procedure mentioned in Annex A.21 with the following input and output parameters

  • in `s` - Subscription reference
  
  • in `currentTime` - current time for the DUT
  
  • in `terminationTime` - subscription termination time
  
  • in `accessProfileToken` - access profile token

13. ONVIF Client deletes PullPoint subscription by following the procedure mentioned in Annex A.20 with the following input and output parameters

  • in `s` - Subscription reference

14. ONVIF Client retrieves a access profile by following the procedure mentioned in Annex A.8 with the following input and output parameters

  • in `accessProfileToken` - access profile token
  
  • out `accessProfileList` - the list of access profiles

15. If `accessProfileList[0]` item does not have equal to `accessProfile`, FAIL the test, restore the DUT state, and skip other steps.
16. ONVIF Client retrieves a access profile info by following the procedure mentioned in Annex A.9 with the following input and output parameters

- in `accessProfileToken` - access profile token

- out `accessProfileInfoList` - the list of access profiles info

17. If `accessProfileInfoList[0]` item does not have equal fields with `accessProfile`, FAIL the test, restore the DUT state, and skip other steps.

18. ONVIF Client retrieves complete list of access profiles info by following the procedure mentioned in Annex A.1 with the following input and output parameters

- out `accessProfileInfoCompleteList` - access profile info complete list

19. If `accessProfileInfoCompleteList` does not have `AccessProfileInfo[token = accessProfileToken]` item with equal fields with `accessProfile`, FAIL the test, restore the DUT state, and skip other steps.

20. ONVIF Client retrieves complete list of access profiles by following the procedure mentioned in Annex A.3 with the following input and output parameters

- out `accessProfileCompleteList` - access profile complete list

21. If `accessProfileCompleteList` does not have `AccessProfile[token = accessProfileToken]` item with equal fields with `accessProfile`, FAIL the test, restore the DUT state, and skip other steps.

22. ONVIF Client deletes the Access Profile by following the procedure mentioned in Annex A.6 with the following input and output parameters

- in `accessProfileToken` - access profile token

23. If there was access profile deleted at step 4:

23.1. ONVIF Client restores access profile by following the procedure mentioned in Annex A.10 with the following input and output parameters

- in `accessProfileToRestore` - removed access profile

24. ONVIF Client deletes the Schedule by following the procedure mentioned in Annex A.17 with the following input and output parameters

- in `scheduleToken` - schedule token

25. If `cap.SpecialDaysSupported = true:`
25.1. ONVIF Client deletes special day group by following the procedure mentioned in Annex A.18 with the following input and output parameters

• in `specialDayGroupToken` - special day group token

Test Result:

PASS –

• DUT passes all assertions.

FAIL –

• The DUT did not send `SetAccessProfilesResponse` message.

Note: The following fields are compared at steps 15 and 21:

• AccessProfile:
  • token
  • Name
  • Description
  • AccessPolicy
    • ScheduleToken
    • Entity
    • EntityType

Note: The following fields are compared at steps 17 and 19:

• AccessProfileInfo:
  • token
  • Name
  • Description

4.3.15 SET ACCESS PROFILE

Test Case ID: ACCESS_RULES-3-1-16

**Feature Under Test:** SetAccessProfile

**WSDL Reference:** accessrules.wsdl and event.wsdl

**Test Purpose:** To verify access profile modification using SetAccessProfile command and to verify tns1:Configuration/AccessProfile/Changed event generation.

**Pre-Requisite:** Access Rules Service is received from the DUT. Schedule Service is received from the DUT. Event Service is received from the DUT. Client Supplied Token is supported by the DUT. The DUT shall have enough free storage capacity for one additional Access Profile.

**Test Configuration:** ONVIF Client and DUT

**Test Procedure:**

1. Start an ONVIF Client.

2. Start the DUT.

3. ONVIF Client retrieves complete list of access profiles by following the procedure mentioned in Annex A.3 with the following input and output parameters
   - out initialAccessProfileCompleteList - access profile complete list

4. ONVIF Client checks free storage for additional access profile by following the procedure mentioned in Annex A.7 with the following input and output parameters
   - in initialAccessProfileCompleteList - access profile complete list
   - out accessProfileToRestore - removed access profile

5. ONVIF Client retrieves complete list of schedules by following the procedure mentioned in Annex A.4 with the following input and output parameters
   - out initialScheduleCompleteList - schedule complete list

6. If Access Control service is supported by the DUT:
   6.1. ONVIF Client retrieves complete list of access point information by following the procedure mentioned in Annex A.5 with the following input and output parameters
       - out accessPointInfoCompleteList - access point info complete list
7. ONVIF Client creates access profile by following the procedure mentioned in Annex A.11 with the following input and output parameters

- in `scheduleCompleteList` - schedule complete list
- in `accessPointInfoCompleteList` - access point info complete list
- out `accessProfileToken` - token of new access profile

8. ONVIF Client creates PullPoint subscription for the specified topic by following the procedure mentioned in Annex A.19 with the following input and output parameters

- in `tns1:Configuration/AccessProfile/Changed` - Notification Topic
- out `s` - Subscription reference
- out `currentTime` - current time for the DUT
- out `terminationTime` - Subscription termination time

9. Set `accessProfile` :=

- `AccessProfile.token := accessProfileToken`
- `AccessProfile.Name := "Test Access Profile 2"`
- `AccessProfile.Description := "Test Description 2"`

- If `accessPointInfoCompleteList` contains at least one item:
  - `AccessProfile.AccessPolicy[0].ScheduleToken := scheduleToken`
  - `AccessProfile.AccessPolicy[0].Entity := accessPointInfoCompleteList[0].token`
  - `AccessProfile.AccessPolicy[0].EntityType is skipped`
  - `AccessProfile.AccessPolicy[0].Extension is skipped`

  otherwise:
  - `AccessProfile.AccessPolicy is skipped`
  - `AccessProfile.Extension is skipped`

10. ONVIF client invokes `SetAccessProfile` request with parameters

- `AccessProfile := accessProfile`

11. The DUT responds with `SetAccessProfileResponse` message.
12. ONVIF Client retrieves and checks **tns1:Configuration/AccessProfile/Changed** event for the specified Schedule token by following the procedure mentioned in Annex A.21 with the following input and output parameters

- in s - Subscription reference
- in currentTime - current time for the DUT
- in terminationTime - subscription termination time
- in accessProfileToken - access profile token

13. ONVIF Client deletes PullPoint subscription by following the procedure mentioned in Annex A.20 with the following input and output parameters

- in s - Subscription reference

14. ONVIF Client retrieves a access profile by following the procedure mentioned in Annex A.8 with the following input and output parameters

- in accessProfileToken - access profile token
- out accessProfileList - the list of access profiles

15. If accessProfileList[0] item does not have equal to accessProfile, FAIL the test, restore the DUT state, and skip other steps.

16. ONVIF Client retrieves a access profile info by following the procedure mentioned in Annex A.9 with the following input and output parameters

- in accessProfileToken - access profile token
- out accessProfileInfoList - the list of access profiles info

17. If accessProfileInfoList[0] item does not have equal fields with accessProfile, FAIL the test, restore the DUT state, and skip other steps.

18. ONVIF Client retrieves complete list of access profiles info by following the procedure mentioned in Annex A.1 with the following input and output parameters

- out accessProfileInfoCompleteList - access profile info complete list

19. If accessProfileInfoCompleteList does not have AccessProfileInfo[token = accessProfileToken] item with equal fields with accessProfile, FAIL the test, restore the DUT state, and skip other steps.

20. ONVIF Client retrieves complete list of access profiles by following the procedure mentioned in Annex A.3 with the following input and output parameters
• out `accessProfileCompleteList` - access profile complete list

21. If `accessProfileCompleteList` does not have `AccessProfile[token = accessProfileToken]` item with equal fields with `accessProfile`, FAIL the test, restore the DUT state, and skip other steps.

22. ONVIF Client deletes the Access Profile by following the procedure mentioned in Annex A.6 with the following input and output parameters

• in `accessProfileToken` - access profile token

23. If there was access profile deleted at step 4:

23.1. ONVIF Client restores access profile by following the procedure mentioned in Annex A.10 with the following input and output parameters

• in `accessProfileToRestore` - removed access profile

Test Result:

PASS –

• DUT passes all assertions.

FAIL –

• The DUT did not send `SetAccessProfilesResponse` message.

Note: The following fields are compared at steps 15 and 21:

• AccessProfile:

  • token
  
  • Name
  
  • Description
  
  • AccessPolicy

    • ScheduleToken
  
  • Entity
    
  • EntityType

Note: The following fields are compared at steps 17 and 19:
4.4 Events

4.4.1 ACCESS PROFILE CHANGED EVENT

Test Case ID: ACCESS_RULES-5-1-1

Specification Coverage: Event Changed (ONVIF Access Rules Service Specification)

Feature Under Test: GetEventProperties

WSDL Reference: accessrules.wsdl and event.wsdl

Test Purpose: To verify tns1:Configuration/AccessProfile/Changed event format.

Pre-Requisite: Access Rules Service is supported by the DUT. Event Service is received from the DUT.

Test Configuration: ONVIF Client and DUT

Test Procedure:

1. Start an ONVIF Client.
2. Start the DUT.
3. ONVIF Client invokes GetEventProperties.
4. The DUT responds with a GetEventPropertiesResponse message with parameters
   - TopicNamespaceLocation list
   - FixedTopicSet
   - TopicSet =: topicSet
   - TopicExpressionDialect list
   - MessageContentFilterDialect list
5. If `topicSet` does not contain `tns1:Configuration/AccessProfile/Changed` topic, FAIL the test and skip other steps.

6. ONVIF Client verifies `tns1:Configuration/AccessProfile/Changed` topic (`ChangedTopic`) from `topicSet`:
   
   6.1. If `ChangedTopic.MessageDescription.IsProperty` equals to true, FAIL the test and skip other steps.
   
   6.2. If `ChangedTopic` does not contain `MessageDescription.Source.SimpleItemDescription` item with Name = "AccessProfileToken", FAIL the test and skip other steps.
   
   6.3. If `ChangedTopic.MessageDescription.Source.SimpleItemDescription` with Name = "AccessProfileToken" does not have Type = "pt:ReferenceToken", FAIL the test and skip other steps.

Test Result:

PASS –

   • DUT passes all assertions.

FAIL –

   • DUT did not send `GetEventPropertiesResponse` message.

### 4.4.2 ACCESS PROFILE REMOVED EVENT

**Test Case ID:** ACCESS_RULES-5-1-2

**Specification Coverage:** Event Changed (ONVIF Access Rules Service Specification)

**Feature Under Test:** GetEventProperties

**WSDL Reference:** accessrules.wsdl and event.wsdl

**Test Purpose:** To verify `tns1:Configuration/AccessProfile/Removed` event format.

**Pre-Requisite:** Access Rules Service is supported by the DUT. Event Service is received from the DUT.

**Test Configuration:** ONVIF Client and DUT
Test Procedure:

1. Start an ONVIF Client.

2. Start the DUT.

3. ONVIF Client invokes **GetEventProperties**.

4. The DUT responds with a **GetEventPropertiesResponse** message with parameters

   - TopicNamespaceLocation list
   - FixedTopicSet
   - TopicSet =: *topicSet*
   - TopicExpressionDialect list
   - MessageContentFilterDialect list
   - MessageContentSchemaLocation list

5. If *topicSet* does not contain tns1:Configuration/AccessProfile/Removed topic, FAIL the test and skip other steps.

6. ONVIF Client verifies tns1:Configuration/AccessProfile/Removed topic (*RemovedTopic*) from *topicSet*:

   6.1. If *RemovedTopic*.MessageDescription.IsProperty equals to true, FAIL the test and skip other steps.

   6.2. If *RemovedTopic* does not contain *MessageDescription.Source.SimpleItemDescription* item with Name = "AccessProfileToken", FAIL the test and skip other steps.

   6.3. If *RemovedTopic*.MessageDescription.Source.SimpleItemDescription with Name = "AccessProfileToken" does not have Type = "pt:ReferenceToken", FAIL the test and skip other steps.

Test Result:

PASS –

- DUT passes all assertions.

FAIL –

- DUT did not send **GetEventPropertiesResponse** message.
4.5 Consistency

4.5.1 ACCESS POLICIES AND ACCESS POINT CONSISTENCY

Test Case ID: ACCESS_RULERS-6-1-1

Feature Under Test: GetAccessProfileList, GetAccessPointInfoList

WSDL Reference: accessrules.wsdl and accesscontrol.wsdl

Test Purpose: To verify that Access Policies List contains only Access Points from Access Point Info List.

Pre-Requisite: Access Rules Service is received from the DUT. Access Control Service is received from the DUT.

Test Configuration: ONVIF Client and DUT

Test Procedure:

1. Start an ONVIF Client.
2. Start the DUT.
3. ONVIF Client retrieves a complete list of access profiles (out accessProfileCompleteList) by following the procedure mentioned in Annex A.3.
4. ONVIF Client retrieves a complete list of access point information (out accessPointInfoCompleteList) by following the procedure mentioned in Annex A.5.
5. For each access profile (accessProfile) from accessProfileCompleteList do the following:
   5.1. For each accessProfile.AccessPolicy with skipped EntityType or EntityType equal to tac:AccessPoint repeat the following steps:
       5.1.1. If accessPointInfoCompleteList does not contain Access Point token equal to accessProfile.AccessPolicy.Entity item, FAIL the test and skip other steps.

Test Result:

PASS –
• DUT passes all assertions.
A.1 Get access profiles information list

Name: HelperGetAccessProfileInfoList

Procedure Purpose: Helper procedure to get complete access profiles information list.

Pre-requisite: Access Rules Service is received from the DUT.

Input: None.

Returns: The complete list of access profiles information (accessProfileInfoCompleteList).

Procedure:

1. ONVIF client invokes GetAccessProfileInfoList with parameters
   • Limit skipped
   • StartReference skipped

2. The DUT responds with GetAccessProfileInfoListResponse message with parameters
   • NextStartReference =: nextStartReference
   • AccessProfileInfo list =: accessProfileInfoCompleteList

3. Until nextStartReference is not null, repeat the following steps:
   3.1. ONVIF client invokes GetAccessProfileInfoList with parameters
        • Limit skipped
        • StartReference := nextStartReference
   3.2. The DUT responds with GetAccessProfileInfoListResponse message with parameters
        • NextStartReference =: nextStartReference
        • AccessProfileInfo list =: accessProfileInfoListPart
   3.3. Set the following:
        • accessProfileInfoCompleteList := accessProfileInfoCompleteList + accessProfileInfoListPart
Procedure Result:

PASS –

• DUT passes all assertions.

FAIL –

• DUT did not send GetAccessProfileInfoListResponse message.

A.2 Get service capabilities

Name: HelperGetServiceCapabilities

Procedure Purpose: Helper procedure to get service capabilities.

Pre-requisite: Access Rules Service is received from the DUT.

Input: None

Returns: The service capabilities (cap).

Procedure:

1. ONVIF client invokes GetServiceCapabilities.

2. The DUT responds with a GetServiceCapabilitiesResponse message with parameters

   • Capabilities =: cap

Procedure Result:

PASS –

• The DUT passed all assertions.

FAIL –

• The DUT did not send GetServiceCapabilitiesResponse message.

A.3 Get access profiles list

Name: HelperGetAccessProfilesList

Procedure Purpose: Helper procedure to get complete access profiles list with.

Pre-requisite: Access Rules Service is received from the DUT.
Input: None.

Returns: The complete list of access profiles (accessProfileCompleteList).

Procedure:

1. ONVIF client invokes GetAccessProfileList with parameters
   • Limit skipped
   • StartReference skipped

2. The DUT responds with GetAccessProfileListResponse message with parameters
   • NextStartReference =: nextStartReference
   • AccessProfile list =: accessProfileCompleteList

3. Until nextStartReference is not null, repeat the following steps:
   3.1. ONVIF client invokes GetAccessProfileList with parameters
       • Limit skipped
       • StartReference := nextStartReference
   3.2. The DUT responds with GetAccessProfileListResponse message with parameters
       • NextStartReference =: nextStartReference
       • AccessProfile list =: accessProfileListPart
   3.3. Set the following:
       • accessProfileCompleteList := accessProfileCompleteList + accessProfileListPart

Procedure Result:

PASS –
   • DUT passes all assertions.

FAIL –
   • DUT did not send GetAccessProfileListResponse message.

A.4 Get schedule list

Name: HelperGetScheduleList
Procedure Purpose: Helper procedure to get complete schedule list.

Pre-requisite: Schedule Service is received from the DUT.

Input: None.

Returns: The complete list of schedules (scheduleCompleteList).

Procedure:

1. ONVIF Client invokes GetScheduleList request with parameters
   - Limit skipped
   - StartReference skipped

2. The DUT responds with GetScheduleListResponse message with parameters
   - NextStartReference =: nextStartReference
   - Schedule list =: scheduleCompleteList

3. Until nextStartReference is not null, repeat the following steps:

   3.1. ONVIF client invokes GetScheduleList with parameters
       - Limit skipped
       - StartReference := nextStartReference

   3.2. The DUT responds with GetScheduleListResponse message with parameters
       - NextStartReference =: nextStartReference
       - Schedule list =: scheduleListPart

   3.3. Set the following:
       - scheduleCompleteList := scheduleCompleteList + scheduleListPart

Procedure Result:

PASS –
   - DUT passes all assertions.

FAIL –
   - DUT did not send GetScheduleListResponse message.
A.5 Get access point information list

Name: HelperGetAccessPointInfoList

Procedure Purpose: Helper procedure to get complete access point information list.

Pre-requisite: Access Control Service is received from the DUT.

Input: None.

Returns: The complete list of access point information (accessPointInfoCompleteList).

Procedure:

1. ONVIF Client invokes GetAccessPointInfoList request with parameters
   • Limit skipped
   • StartReference skipped

2. The DUT responds with GetAccessPointInfoListResponse message with parameters
   • NextStartReference =: nextStartReference
   • Schedule list =: accessPointInfoCompleteList

3. Until nextStartReference is not null, repeat the following steps:
   3.1. ONVIF client invokes GetAccessPointInfoList with parameters
        • Limit skipped
        • StartReference := nextStartReference
   3.2. The DUT responds with GetAccessPointInfoListResponse message with parameters
        • NextStartReference =: nextStartReference
        • AccessPointInfo list =: accessPointInfoListPart
   3.3. Set the following:
        • accessPointInfoCompleteList := accessPointInfoCompleteList + accessPointInfoListPart

Procedure Result:

PASS –
• DUT passes all assertions.

FAIL –

• DUT did not send `GetAccessPointInfoListResponse` message.

A.6 Delete access profile

**Name:** HelperDeleteAccessProfile

**Procedure Purpose:** Helper procedure to delete access profile.

**Pre-requisite:** Access Rules Service is received from the DUT.

**Input:** Access Profile Token (`accessProfileToken`).

**Returns:** None.

**Procedure:**

1. ONVIF Client invokes `DeleteAccessProfile` request.
   
   • Token = `accessProfileToken`

2. The DUT responds with empty `DeleteAccessProfileResponse` message.

**Procedure Result:**

PASS –

• DUT passes all assertions.

FAIL –

• DUT did not send `DeleteAccessProfileResponse` message.

A.7 Free storage for additional access profile

**Name:** HelperCheckFreeStorageForAccessProfile

**Procedure Purpose:** Helper procedure to check free storage for additional access profile.

**Pre-requisite:** Access Rules Service is received from the DUT.

**Input:** The complete list of access profiles (`accessProfileCompleteList`).
Returns: Access Profile to restore (accessProfileToRestore).

Procedure:

1. ONVIF Client gets the service capabilities (out cap) by following the procedure mentioned in Annex A.2.

2. ONVIF client compares cap.MaxAccessProfiles with number of items at accessProfileCompleteList.

3. If number of items at accessProfileCompleteList less than cap.MaxAccessProfiles, skip other steps.

4. If number of items at accessProfileCompleteList equal to cap.MaxAccessProfiles, execute the following steps:
   4.1. ONVIF client invokes GetAccessProfiles with parameters
       - Token list := accessProfileCompleteList[0].token
   4.2. The DUT responds with GetAccessProfilesResponse message with parameters
       - AccessProfile list =: accessProfileToRestore
   4.3. ONVIF Client deletes the Access Profile (in accessProfileCompleteList[0].token) by following the procedure mentioned in Annex A.6.

Procedure Result:

PASS –
- DUT passes all assertions.

FAIL –
- The number of items at accessProfileCompleteList more than cap.MaxAccessProfiles.

A.8 Get access profile

Name: HelperGetAccessProfile

Procedure Purpose: Helper procedure to get access profile.

Pre-requisite: Access Rules Service is received from the DUT.

Input: Access Profile Token (accessProfileToken).
Returns: Access Profile List (accessProfileList).

Procedure:

1. ONVIF Client invokes GetAccessProfiles request with parameters
   • Token[0] := accessProfileToken

2. The DUT responds with GetAccessProfilesResponse message with parameters
   • AccessProfile list := accessProfileList

Procedure Result:

PASS –

• DUT passes all assertions.

FAIL –

• DUT did not send GetAccessProfilesResponse message.

A.9 Get access profile info

Name: HelperGetAccessProfileInfo

Procedure Purpose: Helper procedure to get access profile info.

Pre-requisite: Access Rules Service is received from the DUT.

Input: Access Profile Token (accessProfileToken).

Returns: Access Profile Info List (accessProfileInfoList).

Procedure:

1. ONVIF Client invokes GetAccessProfileInfo request with parameters
   • Token := accessProfileToken

2. The DUT responds with GetAccessProfileInfoResponse message with parameters
   • AccessProfileInfo := accessProfileInfoList

Procedure Result:

PASS –
• DUT passes all assertions.

FAIL –
• DUT did not send `GetAccessProfilesResponse` message.

A.10 Restore access profile

Name: HelperRestoreAccessProfile

Procedure Purpose: Helper procedure to restore access profile.

Pre-requisite: Access Rules Service is received from the DUT.

Input: Access Profile (`accessProfile`).

Returns: None.

Procedure:

1. ONVIF Client invokes `CreateAccessProfile` request with parameters
   • `AccessProfile := accessProfile`

2. The DUT responds with `CreateAccessProfileResponse` message with parameters
   • `Token := accessProfileToken`

Procedure Result:

PASS –
• DUT passes all assertions.

FAIL –
• DUT did not send `CreateAccessProfileResponse` message.

A.11 Create access profile

Name: HelperCreateAccessProfile

Procedure Purpose: Helper procedure to Create access profile.

Pre-requisite: Access Rules Service is received from the DUT.
**Input:** Complete list of schedules (scheduleCompleteList), complete list of access point info (accessPointInfoCompleteList).

**Returns:** Access Profile Token (accessProfileToken).

**Procedure:**

1. ONVIF client invokes **CreateAccessProfile** with parameters
   - AccessProfile.token := ""
   - AccessProfile.Name := "Test Access Profile"
   - AccessProfile.Description := "Test Description"
   - AccessProfile.AccessPolicy is skipped if scheduleCompleteList or accessPointInfoCompleteList is empty
   - AccessProfile.AccessPolicy[0].ScheduleToken := scheduleCompleteList[0].token
   - AccessProfile.AccessPolicy[0].Entity := accessPointInfoCompleteList[0].token
   - AccessProfile.AccessPolicy[0].EntityType skipped
   - AccessProfile.AccessPolicy[0].Extension skipped
   - AccessProfile.Extension skipped
2. The DUT responds with **CreateAccessProfileResponse** message with parameters
   - Token =: accessProfileToken

**Procedure Result:**

**PASS** –
- DUT passes all assertions.

**FAIL** –
- DUT did not send **CreateAccessProfileResponse** message.

**A.12 Get service capabilities (Schedule)**

**Name:** Helper.GetServiceCapabilitiesSchedule

**Procedure Purpose:** Helper procedure to get service capabilities for Schedule Service.
Pre-requisite: Schedule Service is received from the DUT.

Input: None.

Returns: The service capabilities (cap).

Procedure:

1. ONVIF client invokes GetServiceCapabilities.
2. The DUT responds with a GetServiceCapabilitiesResponse message with parameters
   • Capabilities = cap

Procedure Result:

PASS –
  • The DUT passed all assertions.

FAIL –
  • The DUT did not send GetServiceCapabilitiesResponse message.

A.13 Generate UID value for iCalendar

Name: HelperUIDiCalendarGeneration

Procedure Purpose: Helper procedure to generate Unique Identifier value for UID field in iCalendar.

Pre-requisite: Schedule Service is received from the DUT.

Input: None.

Returns: Unique Identifier value for UID field in iCalendar (uid) that is compliant to [RFC 2445].

Procedure:

1. ONVIF Client generates Globally Unique Identifier value.

A.14 Generate iCalendar value for Schedule

Name: HelperScheduleiCalendarGeneration

Procedure Purpose: Helper procedure to generate iCalendar value for Schedule.Standard field.
Pre-requisite: Schedule Service is received from the DUT.

Input: The Schedule service capabilities (cap).

Returns: iCalendar value for Standard field (scheduleiCalendarValue) that is compliant to [RFC 2445].

Procedure:

1. ONVIF Client generates Unique Identifier value for UID field in iCalendar (out uid) by following the procedure mentioned in Annex A.13.

2. If cap.ExtendedRecurrenceSupported is equal to true, set the following:
   
   • scheduleiCalendarValue := "BEGIN:VCALENDAR
   BEGIN:VEVENT
   SUMMARY:Access from 9 AM to 6 PM
   DTSTART:<current year><current month><current day>T090000
   DTEND:<year of (current day + one week)><month of (current day + one week)><day of (current day + one week)>T180000
   RRULE:FREQ=DAILY
   UID:uid
   END:VEVENT
   END:VCALENDAR"

3. If cap.ExtendedRecurrenceSupported is equal to false, set the following:
   
   • scheduleiCalendarValue := "BEGIN:VCALENDAR
   BEGIN:VEVENT
   SUMMARY:Access on weekdays from 9 AM to 6 PM for employees
   DTSTART:1970<current month><current day>T090000
   DTEND:1970<current month><current day>T180000
   RRULE:FREQ=WEEKLY;BYDAY=MO,TU,WE,TH,FR
   UID:uid"
A.15 Create special day group

Name: HelperCreateSpecialDayGroup

Procedure Purpose: Helper procedure to create SpecialDayGroup with Days field value that is compliant to [RFC 2445].

Pre-requisite: Schedule Service is received from the DUT. Special Days is supported by the DUT as indicated by the Capabilities.SpecialDaysSupported. The DUT shall have enough free storage capacity for one additional SpecialDayGroup.

Input: iCalendar value of the SpecialDayGroup.Days field (days) that is compliant to [RFC 2445].

Returns: Returns: Special day group token (specialDayGroupToken), iCalendar value of Days field (days) that is compliant to [RFC 2445].

Procedure:

1. ONVIF Client generates Unique Identifier value for UID field in iCalendar (out uid) by following the procedure mentioned in Annex A.13.

2. If days is empty, set the following:
   
   • days := "BEGIN:VCALENDAR
     BEGIN:VEVENT
     SUMMARY:Test special days
     DTSTART:<current year><current month><current day>T000000
     DTEND:<year of the next day><month of the next day><day of the next day>T000000
     UID:uid
     END:VEVENT
     END:VCALENDAR"

3. ONVIF client invokes CreateSpecialDayGroup with parameters
   
   • SpecialDayGroup.token := ""
• SpecialDayGroup.Name := "Test SpecialDayGroup Name"

• SpecialDayGroup.Description := "Test SpecialDayGroup Description"

• SpecialDayGroup.Days := days

4. The DUT responds with `CreateSpecialDayGroupResponse` message with parameters

    • Token =: `specialDayGroupToken`

**Procedure Result:**

**PASS** –

• The DUT passed all assertions.

**FAIL** –

• The DUT did not send `CreateSpecialDayGroupResponse` message.

### A.16 Create Schedule

**Name:** HelperCreateSchedule

**Procedure Purpose:** Helper procedure to create Schedule with Standard field value that is compliant to [RFC 2445].

**Pre-requisite:** Schedule Service is received from the DUT. The DUT shall have enough free storage capacity for one additional Schedule.

**Input:** iCalendar value of the Schedule.Standard field (`scheduleiCalendarValue`), SpecialDayGroupToken (`specialDayGroupToken`).

**Returns:** Schedule token (`scheduleToken`).

**Procedure:**

1. ONVIF client invokes `CreateSchedule` with parameters

   • Schedule.token := ""
   
   • Schedule.Description := "Test Description"
   
   • Schedule.Name := "Test Name"
   
   • Schedule.Standard := `scheduleiCalendarValue`
Schedule.SpecialDays skipped if specialDayGroupToken is empty

Schedule.SpecialDays.GroupToken := specialDayGroupToken

Schedule.SpecialDays.TimeRange.From := "22:00:00"

Schedule.SpecialDays.TimeRange.Until := "23:00:00"

2. The DUT responds with CreateScheduleResponse message with parameters

   • Token =: scheduleToken

Procedure Result:

PASS –

• The DUT passed all assertions.

FAIL –

• The DUT did not send CreateScheduleResponse message.

A.17 Delete schedule

Name: HelperDeleteSchedule

Procedure Purpose: Helper procedure to delete schedule.

Pre-requisite: Schedule Service is received from the DUT.

Input: Schedule Token (scheduleToken).

Returns: None.

Procedure:

1. ONVIF client invokes DeleteSchedule with parameters

   • Token =: scheduleToken

2. The DUT responds with empty DeleteScheduleResponse message

Procedure Result:

PASS –

• The DUT passed all assertions.
A.18 Delete special day group

**Name:** HelperDeleteSpecialDayGroup

**Procedure Purpose:** Helper procedure to delete SpecialDayGroup.

**Pre-requisite:** Schedule Service is received from the DUT. Special Days is supported by the DUT as indicated by the Capabilities.SpecialDaysSupported.

**Input:** SpecialDayGroup Token (specialDayGroupToken).

**Returns:** None.

**Procedure:**

1. ONVIF client invokes DeleteSpecialDayGroup with parameters

   - Token =: specialDayGroupToken

2. The DUT responds with empty DeleteSpecialDayGroupResponse message

**Procedure Result:**

**PASS –**

- The DUT passed all assertions.

**FAIL –**

- The DUT did not send DeleteSpecialDayGroupResponse message.

A.19 Create Pull Point Subscription

**Name:** HelperCreatePullPointSubscription

**Procedure Purpose:** Helper procedure to create PullPoint Subscription with specified Topic.

**Pre-requisite:** Event Service is received from the DUT.

**Input:** Notification Topic (topic).

**Returns:** Subscription reference (s), current time for the DUT (ct), subscription termination time (tt).

**Procedure:**
1. ONVIF Client invokes **CreatePullPointSubscription** request with parameters
   - Filter.TopicExpression := *topic*
   - Filter.TopicExpression.@Dialect := "http://www.onvif.org/ver10/tev/topicExpression/ConcreteSet"

2. The DUT responds with **CreatePullPointSubscriptionResponse** message with parameters
   - SubscriptionReference := *s*
   - CurrentTime := *ct*
   - TerminationTime := *tt*

**Procedure Result:**

**PASS** –
- DUT passes all assertions.

**FAIL** –
- DUT did not send **CreatePullPointSubscriptionResponse** message.

### A.20 Delete Subscription

**Name:** HelperDeleteSubscription

**Procedure Purpose:** Helper procedure to delete subscription.

**Pre-requisite:** Event Service is received from the DUT.

**Input:** Subscription reference (*s*)

**Returns:** None

**Procedure:**

1. ONVIF Client sends an **Unsubscribe** to the subscription endpoint *s*.
2. The DUT responds with **UnsubscribeResponse** message.

**Procedure Result:**

**PASS** –
- DUT passes all assertions.
FAIL –

- DUT did not send **UnsubscribeResponse** message.

### A.21 Retrieve Access Profile Changed Event by PullPoint

**Name:** HelperPullAccessProfileChanged

**Procedure Purpose:** Helper procedure to retrieve and check tns1:Configuration/AccessProfile/Changed event with PullMessages.

**Pre-requisite:** Event Service is received from the DUT.

**Input:** Subscription reference (s), current time for the DUT (ct), Subscription termination time (tt) and access profile token (accessProfileToken).

**Returns:** None

**Procedure:**

1. Until **operationDelay** timeout expires, repeat the following steps:

   1.1. ONVIF Client waits for time $t := \min\{(tt-ct)/2, 1\text{ second}\}$.

   1.2. ONVIF Client invokes **PullMessages** to the subscription endpoint s request with parameters

      - Timeout := PT60S
      - MessageLimit := 1

   1.3. The DUT responds with **PullMessagesResponse** message with parameters

      - CurrentTime =: ct
      - TerminationTime =: tt
      - NotificationMessage list =: notificationMessageList

   1.4. If **notificationMessageList** is not empty and the AccessProfileToken source simple item in **notificationMessageList** is equal to accessProfileToken, skip other steps and finish the procedure.

   1.5. If **operationDelay** timeout expires for step 1 without Notification with AccessProfileToken source simple item equal to accessProfileToken, FAIL the test, restore the DUT state, and skip other steps.
Procedure Result:

PASS –

• DUT passes all assertions.

FAIL –

• DUT did not send `PullMessagesResponse` message.

Note: `operationDelay` will be taken from Operation Delay field of ONVIF Device Test Tool.
