1 Introduction

The goal of the ONVIF Test Specification set is to make it possible to realize fully interoperable IP physical security implementations from different vendors. This specification also acts as an input document to the development of a test tool which will be used to test the ONVIF Client implementation conformance towards ONVIF standard. This Client Test Tool analyzes network communications between ONVIF Devices and Clients being tested and determines whether a specific Client is ONVIF conformant (see ONVIF Conformance Process Specification).

This particular document defines test cases required for Client features that are out of any profiles. It also describes the test framework, test setup, prerequisites, test policies needed for the execution of the described test cases.

1.1 Scope

This ONVIF Other Features Client Test Specification defines and regulates the conformance testing procedure for the ONVIF conformant Clients in the scope of features which are out of any profile. Conformance testing is meant to be black-box network traces analysis and verification. The objective of this specification is to provide the test cases to test individual requirements of ONVIF Clients in the scope of ONVIF Network Specification.

The principal intended purposes are:

- Provide self-assessment tool for implementations.
- Provide comprehensive test suite coverage for Audio Backchannel for Media features.
- Provide comprehensive test suite coverage for some Imaging features.
- Provide comprehensive test suite coverage for OSD features for Media.
- Provide comprehensive test suite coverage for TLS Enabled Version configuration.

This specification does not address the following:

- 3rd parties Client use cases
- Non-functional (performance and regression) testing and analysis.
- SOAP Implementation Interoperability test i.e. Web Services Interoperability Basic Profile version 2.0 (WS-I BP2.0).
- Network protocol implementation Conformance test for HTTPS and HTTP protocols.

The following sections cover test cases needed for the verification of relevant features as mentioned in the ONVIF Profile Specifications.
1.2 Audio Backchannel for Media Features

1.2.1 Audio Backchannel Streaming

Audio Backchannel Streaming section specifies Client ability to stream audio for backchannel to Device.

1.2.2 Get Audio Decoder Configurations List

Get Audio Decoder Configurations List section specifies Client ability to request audio decoder configurations list from a Device.

1.2.3 Get Audio Output Configurations List

Get Audio Output Configurations List section specifies Client ability to request audio output configurations list from a Device.

1.2.4 Get Audio Outputs List

Get Audio Outputs List section specifies Client ability to request audio outputs list from a Device.

1.2.5 Get Audio Decoder Configuration

Get Audio Decoder Configuration section specifies Client ability to request audio decoder settings from a Device.

1.2.6 Get Audio Output Configuration

Get Audio Output Configuration section specifies Client ability to request audio output settings from a Device.

1.2.7 Profile Configuration for Audio Backchannel

Profile Configuration for Audio Backchannel section specifies Client ability to configure media profile for audio backchannel streaming on a Device.

1.2.8 Configure Audio Decoder Configuration

Configure Audio Decoder Configuration section specifies Client ability to change audio decoder configuration on a Device.
1.2.9 Configure Audio Output Configuration

Configure Audio Output Configuration section specifies Client ability to change audio output configuration on a Device.

1.3 Imaging Features

1.3.1 Get Imaging Capabilities

Get Imaging Capabilities section specifies Client ability to request imaging capabilities from Device.

1.4 OSD for Media Features

1.4.1 Get OSD Configuration

Get OSD Configuration section specifies Client ability to request OSD configuration from Device.

1.4.2 Get OSD List

Get OSD List section specifies Client ability to request OSD list from Device.

1.4.3 OSD Configuration

OSD Configuration section specifies Client ability to change OSD settings on Device.

1.5 Security Configuration Features

1.5.1 Enabled TLS Versions Configuration

Enabled TLS Versions Configuration section specifies Client ability to configure enabled TLS versions on Device.

3 Terms and Definitions

3.1 Conventions

The key words "shall", "shall not", "should", "should not", "may", "need not", "can", "cannot" in this specification are to be interpreted as described in [ISO/IEC Directives Part 2].

3.2 Definitions

This section describes terms and definitions used in this document.

<table>
<thead>
<tr>
<th>Term</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Address</td>
<td>An address refers to a URI.</td>
</tr>
<tr>
<td>Profile</td>
<td>See ONVIF Profile Policy.</td>
</tr>
<tr>
<td>ONVIF Device</td>
<td>Computer appliance or software program that exposes one or multiple ONVIF Web Services.</td>
</tr>
<tr>
<td>ONVIF Client</td>
<td>Computer appliance or software program that uses ONVIF Web Services.</td>
</tr>
<tr>
<td>Conversation</td>
<td>A Conversation is all exchanges between two MAC addresses that contains SOAP request and response.</td>
</tr>
<tr>
<td>Network</td>
<td>A network is an interconnected group of devices communicating using the Internet protocol.</td>
</tr>
<tr>
<td>Network Trace Capture file</td>
<td>Data file created by a network protocol analyzer software (such as Wireshark). Contains network packets data recorded during a live network communications.</td>
</tr>
<tr>
<td>SOAP</td>
<td>SOAP is a lightweight protocol intended for exchanging structured information in a decentralized, distributed environment. It uses XML technologies to define an extensible messaging framework providing a message construct that can be exchanged over a variety of underlying protocols.</td>
</tr>
<tr>
<td>Client Test Tool</td>
<td>ONVIF Client Test Tool that tests ONVIF Client implementation towards the ONVIF Test Specification set.</td>
</tr>
<tr>
<td>Valid Device Response</td>
<td>Device has responded to specific request with code HTTP or RTSP 200 OK and SOAP fault message has not appeared.</td>
</tr>
<tr>
<td>Configuration Entity</td>
<td>A network video device media abstract component that is used to produce a media stream on the network, i.e. video and/or audio stream.</td>
</tr>
<tr>
<td>Media Profile</td>
<td>Maps a video or an audio source or an audio output to a video or an audio encoder, an audio decoder configuration and PTZ and analytics configuration</td>
</tr>

</table>

3.3 Abbreviations

This section describes abbreviations used in this document.
HTTP  Hyper Text Transport Protocol.

HTTPS  Hyper Text Transport Protocol over Secure Socket Layer.

IP  Internet Protocol.

TCP  Transport Control Protocol.

UDP  User Datagram Protocol.

URI  Uniform Resource Identifier.

WSDL  Web Services Description Language.

XML  eXtensible Markup Language.

RTSP  Real Time Streaming Protocol.

RTP  Realtime Transport Protocol.

SDP  Session Description Protocol.

AAC  Advanced Audio Coding.

OSD  On-Screen Display.

3.4 Namespaces

Prefix and namespaces used in this test specification are listed in Table 1. These prefixes are not part of the standard and an implementation can use any prefix.

Table 3.1. Defined namespaces in this specification

4 Test Overview

This section provides information for the test setup procedure and required prerequisites that should be followed during test case execution.

An ONVIF Client with audio backchannel features support can provide audio backchannel configuration and streaming with Media Service.

An ONVIF Client with Imaging features support can provide retrieve of Imaging capabilities.

An ONVIF Client with OSD features support can provide OSD configuration with Media Service.

An ONVIF Client with security configuration features support can provide TLS Enabled Versions Configuration configuration.

An ONVIF Profile is described by a fixed set of functionalities through a number of services that are provided by the ONVIF standard. A number of services and functionalities are mandatory for each type of ONVIF Profile. An ONVIF Device and ONVIF Client may support any combination of Profiles and other optional services and functionalities.

4.1 General

Test Cases are grouped depending on features. Each Test Cases group provides description of feature requirement level for Profiles, expected scenario under test and related test cases:

- Feature Level Requirement
- Expected Scenarios Under Test
- List of Test Cases

4.1.1 Feature Level Requirement

Feature Level Requirement item contains a feature ID, check condition based on Device features, required number of Devices and feature requirement level for the Profiles, which will be used for Profiles conformance.

To claim this Feature as supported Client shall pass Expected Scenario Under Test:

- for each Device, which supports Device Features defined in Check Condition Based on Device Features
- for at least with number of Devices specified in Required Number of Devices
If Feature Level Requirement is defined as Mandatory for some Profile, Client shall support this Feature to claim this Profile Conformance.

### 4.1.2 Expected Scenarios Under Test

Expected Scenarios Under Test item contains expected scenario under test, conditions when the feature will be defined as supported and as not supported.

### 4.1.3 Test Cases

Test Case items contain list of test cases which are related to feature. Test cases provide exact procedure of testing feature support conditions.

Each Test Case contains the following parts:

- Test Label - Unique label for each test
- Test Case ID - Unique ID for each test
- Profile Normative References - Requirement level for the feature under test is defined in Profile Specification. This reference is informative and will not be used in conformance procedure.
- Feature Under Test - Feature which is under current test. Typically a particular command or an event.
- Test Purpose - The purpose of current test case.
- Pre-Requisite - The pre-requisite defines when the test should be performed. In case if pre-requisite does not match, the test result will be NOT DETECTED.
- Test Procedure - scenario expected to be reflected in network trace file.
- Test Result - Passed and failed criteria of the test case. Depending on these criteria test result will be defined as PASSED or FAILED.

### 4.2 Test Setup

Collect Network traces files required by the test cases.

Collect Feature List XML files for Devices detected in the Network Trace files.

Client shall support all mandatory and conditional features listed in the Device Feature List XML file supplied for the Profiles supported by the Client.
For ONVIF compatibility, the ONVIF Client shall follow the requirements of the conformance process. For details, please, see the latest ONVIF Conformance Process Specification.

4.3 Prerequisites

The pre-requisites for executing the test cases described in this Test Specification include:

The Device shall be configured with an IPv4 address.

The Device shall be able to be discovered by the Client.
5 Test Cases for Audio Backchannel for Media

5.1 Audio Backchannel Streaming Test Cases

5.1.1 Feature Level Requirement:

Validated Feature: Audio Backchannel Streaming (AudioBackchannelStreaming)

Check Condition based on Device Features: Audio Output (Media Service) is supported by Device.

Required Number of Devices: 1

Profile A Requirement: None

Profile C Requirement: None

Profile G Requirement: None

Profile Q Requirement: None

Profile S Requirement: None

5.1.2 Expected Scenarios Under Test:

1. Client connects to Device to stream audio for backchannel.

2. Client is considered as supporting Audio Backchannel Streaming if the following conditions are met:
   - Client is able to get audio decoder configuration options to check supported audio backchannel streaming parameters using GetAudioOutputConfigurationOptions operation AND
   - Client is able to stream audio for backchannel using AAC OR G.711 OR G.726.

3. Client is considered as NOT supporting Audio Backchannel Streaming if ANY of the following is TRUE:
   - No valid responses for GetAudioOutputConfigurationOptions request
   - No Audio Backchannel Streaming attempts were found OR
   - Detected AAC Audio Backchannel Streaming attempts have failed OR
• Detected G.711 Audio Backchannel Streaming attempts have failed OR
• Detected G.726 Audio Backchannel Streaming attempts have failed.

5.1.3 GET AUDIO DECODER CONFIGURATION OPTIONS

Test Label: Audio Backchannel Streaming - Get Audio Decoder Configuration Options

Test Case ID: AUDIOBACKCHANNELSTREAMING-1

Feature Under Test: Get Audio Decoder Configuration Options (AudioBackchannelStreaming_GetAudioDecoderConfigurationOptions)

Profile A Normative Reference: None
Profile C Normative Reference: None
Profile G Normative Reference: None
Profile Q Normative Reference: None
Profile S Normative Reference: None

Test Purpose: To verify that Client is able to get audio decoder configuration options provided by Device using the GetAudioDecoderConfigurationOptions operation.

Pre-Requisite:
• The Network Trace Capture files contains at least one Conversation between Client and Device with GetAudioDecoderConfigurationOptions operation present.
• Device supports Audio Outputs.

Test Procedure (expected to be reflected in network trace file):
1. Client invokes GetAudioDecoderConfigurationOptions request message to retrieve audio decoder configuration options for the Device.
2. Device responds with code HTTP 200 OK and GetAudioDecoderConfigurationOptionsResponse message.

Test Result:

PASS -
• Client GetAudioDecoderConfigurationOptions request messages are valid according to XML Schemas listed in Namespaces AND
ONVIF Other Features Client Test Specification Version 19.12

- Client **GetAudioDecoderConfigurationOptions** request in Test Procedure fulfills the following requirements:
  - [S1] `soapenv:Body` element has child element `trt:GetAudioDecoderConfigurationOptions` AND
  - Device response to the **GetAudioDecoderConfigurationOptions** request fulfills the following requirements:
    - [S2] It has HTTP 200 response code AND
    - [S3] `soapenv:Body` element has child element `trt:GetAudioDecoderConfigurationOptionsResponse`.

FAIL -

- The Client failed PASS criteria.

5.1.4 G.711 AUDIO BACKCHANNEL STREAMING

**Test Label**: Audio Backchannel Streaming - G.711

**Test Case ID**: AUDIOBACKCHANNELSTREAMING-2

**Feature Under Test**: G.711 Audio Backchannel Streaming

Profile A Normative Reference: None

Profile C Normative Reference: None

Profile G Normative Reference: None

Profile Q Normative Reference: None

Profile S Normative Reference: None

**Test Purpose**: To verify that audio backchannel streaming to Device was successfully started by Client.

**Pre-Requisite**:

- The Network Trace Capture files contains at least one Conversation between Client and Device with audio backchannel streaming with G.711 encoding.
- Device supports G.711 encoding for Audio Outputs.
Test Procedure (expected to be reflected in network trace file):

1. Client invokes GetStreamUri request message for media profile that contains Audio Output Configuration and Audio Decoder Configuration with RTP-Unicast/UDP OR RTP-Multicast/UDP OR RTP/RTSP/TCP OR RTP-Unicast/RTSP/HTTP/TCP transport.

2. Device responds with code HTTP 200 OK and GetStreamUriResponse message.

3. Client invokes RTSP DESCRIBE request to retrieve media stream description with Require tag in RTSP header that contains "www.onvif.org/ver20/backchannel".

4. Device responds with code RTSP 200 OK with SDP that contains media type "audio" with session attribute "sendonly".

5. Client invokes RTSP SETUP request with transport parameter element to set media session parameters for audio backchannel with Require tag in RTSP header that contains "www.onvif.org/ver20/backchannel".

6. Device responds with code RTSP 200 OK.

7. Client invokes RTSP PLAY request to start media stream with Require tag in RTSP header that contains "www.onvif.org/ver20/backchannel".

8. Device responds with code RTSP 200 OK.

9. Client invokes RTSP TEARDOWN request to terminate the RTSP session with Require tag in RTSP header that contains "www.onvif.org/ver20/backchannel".

10. If Device sends response to RTSP TEARDOWN, it has code RTSP 200 OK.

Note: RTSP requests and RTSP response could be tunneled in HTTP if RTP-Unicast/RTSP/HTTP/TCP transport is used.

Test Result:

Note: If no GetStreamUri (Media Service) corresponding to detected RTSP session found, the test will be assumed as NOT DETECTED.

PASS -

- Client RTSP DESCRIBE request in Test Procedure fulfills the following requirements:
  - [S1] Require tag in RTSP header contains "www.onvif.org/ver20/backchannel" AND
  - Device response to the RTSP DESCRIBE request fulfills the following requirements:
    - [S3] It has RTSP 200 response code AND
• [S4] SDP packet contains media type "audio" (m=audio) with session attribute "sendonly" (a=sendonly) and sessions attribute "rtmpmap" with encoding name "PCMU" AND

• There is Client RTSP SETUP request in Test Procedure that fulfills the following requirements:
  • [S5] It is invoked for the same Device as the response for RTSP DESCRIBE request AND
  • [S6] It is invoked after the Client RTSP DESCRIBE request AND
  • [S7] RTSP address that was used to send RTSP SETUP is corresponds to media type "audio" with session attribute "sendonly" depending on media session attribute, general session attribute and address that was used for the RTSP DESCRIBE request (see [RFC 2326]) AND

• [S8] Require tag in RTSP header contains "www.onvif.org/ver20/backchannel" AND

• Device response to the RTSP SETUP request fulfills the following requirements:
  • [S9] It has RTSP 200 response code AND

• There is a Device response to the GetStreamUri request in Test Procedure that fulfills the following requirements:
  • [S10] It has HTTP 200 response code AND
  • [S11] It is received from the same Device as the response for RTSP DESCRIBE request AND
  • [S12] It is received before the Client RTSP DESCRIBE request AND
  • [S13] It contains trt:MediaUri tt:Uri element which value is equal to RTSP address that was used to send the RTSP DESCRIBE request AND

• There is Client RTSP PLAY request in Test Procedure that fulfills the following requirements:
  • [S14] It is invoked for the same Device as the response for RTSP SETUP request AND
  • [S15] It is invoked after the Client RTSP SETUP request AND
  • [S16] RTSP address that was used to send it should be equal to address that was used for the RTSP DESCRIBE request AND
  • [S17] Require tag in RTSP header contains "www.onvif.org/ver20/backchannel" AND

• Device response to the RTSP PLAY request fulfills the following requirements:
  • [S18] It has RTSP 200 response code AND
• There is Client RTSP TEARDOWN request in Test Procedure that fulfills the following requirements:

  • [S19] It is invoked for the same Device as the response for RTSP SETUP request AND

  • [S20] It is invoked after the Client RTSP PLAY request AND

  • [S21] RTSP address that was used to send it should be equal to address that was used for the RTSP DESCRIBE request AND

  • [S22] Require tag in RTSP header contains "www.onvif.org/ver20/backchannel" AND

• If there is Device response on the RTSP TEARDOWN request then it fulfills the following requirements:

  • [S23] It has RTSP 200 response code.

FAIL -

  • The Client failed PASS criteria.

5.1.5 G.726 AUDIO BACKCHANNEL STREAMING

Test Label: Audio Backchannel Streaming - G.726

Test Case ID: AUDIOBACKCHANNELSTREAMING-3

Feature Under Test: G.726 Audio Backchannel Streaming

(ProfileAStreamingStreaming_G726AudioBackchannelStreaming)

Profile A Normative Reference: None

Profile C Normative Reference: None

Profile G Normative Reference: None

Profile Q Normative Reference: None

Profile S Normative Reference: None

Test Purpose: To verify that audio backchannel streaming to Device was successfully started by Client.

Pre-Requisite:

  • The Network Trace Capture files contains at least one Conversation between Client and Device with audio backchannel streaming with G.726 encoding.
• Device supports G.726 encoding for Audio Outputs.

Test Procedure (expected to be reflected in network trace file):

1. Client invokes GetStreamUri request message for media profile that contains Audio Output Configuration and Audio Decoder Configuration with RTP-Unicast/UDP OR RTP-Multicast/UDP OR RTP/RTSP/TCP OR RTP-Unicast/RTSP/HTTP/TCP transport.

2. Device responds with code HTTP 200 OK and GetStreamUriResponse message.

3. Client invokes RTSP DESCRIBE request to retrieve media stream description with Require tag in RTSP header that contains "www.onvif.org/ver20/backchannel".

4. Device responds with code RTSP 200 OK with SDP that contains media type "audio" with session attribute "sendonly".

5. Client invokes RTSP SETUP request with transport parameter element to set media session parameters for audio backchannel with Require tag in RTSP header that contains "www.onvif.org/ver20/backchannel".

6. Device responds with code RTSP 200 OK.

7. Client invokes RTSP PLAY request to start media stream with Require tag in RTSP header that contains "www.onvif.org/ver20/backchannel".

8. Device responds with code RTSP 200 OK.

9. Client invokes RTSP TEARDOWN request to terminate the RTSP session with Require tag in RTSP header that contains "www.onvif.org/ver20/backchannel".

10. If Device sends response to RTSP TEARDOWN, it has code RTSP 200 OK.

Note: RTSP requests and RTSP response could be tunneled in HTTP if RTP-Unicast/RTSP/HTTP/TCP transport is used.

Test Result:

Note: If no GetStreamUri (Media Service) corresponding to detected RTSP session found, the test will be assumed as NOT DETECTED.

PASS -

• Client RTSP DESCRIBE request in Test Procedure fulfills the following requirements:
  • [S1] Require tag in RTSP header contains "www.onvif.org/ver20/backchannel" AND
  • Device response to the RTSP DESCRIBE request fulfills the following requirements:
• [S3] It has RTSP 200 response code AND

• [S4] SDP packet contains media type "audio" (m=audio) with session attribute "sendonly" (a=sendonly) and sessions attribute "rtpmap" with encoding name "G726-*" AND

• There is Client RTSP SETUP request in Test Procedure that fulfills the following requirements:
  • [S5] It is invoked for the same Device as the response for RTSP DESCRIBE request AND
  • [S6] It is invoked after the Client RTSP DESCRIBE request AND

• [S7] RTSP address that was used to send RTSP SETUP is corresponds to media type "audio" with session attribute "sendonly" depending on media session attribute, general session attribute and address that was used for the RTSP DESCRIBE request (see [RFC 2326]) AND

• [S8] Require tag in RTSP header contains "www.onvif.org/ver20/backchannel" AND

• Device response to the RTSP SETUP request fulfills the following requirements:
  • [S9] It has RTSP 200 response code AND

• There is a Device response to the GetStreamUri request in Test Procedure that fulfills the following requirements:
  • [S10] It has HTTP 200 response code AND
  • [S11] It is received from the same Device the response for RTSP DESCRIBE request AND
  • [S12] It is received before the Client RTSP DESCRIBE request AND

• [S13] It contains trt:MediaUri tt:Uri element which value is equal to RTSP address that was used to send the RTSP DESCRIBE request AND

• There is Client RTSP PLAY request in Test Procedure that fulfills the following requirements:
  • [S14] It is invoked for the same Device as the response for RTSP SETUP request AND
  • [S15] It is invoked after the Client RTSP SETUP request AND

• [S16] RTSP address that was used to send it should be equal to address that was used for the RTSP DESCRIBE request AND

• [S17] Require tag in RTSP header contains "www.onvif.org/ver20/backchannel" AND

• Device response to the RTSP PLAY request fulfills the following requirements:
• [S18] It has RTSP 200 response code AND

• There is Client RTSP TEARDOWN request in Test Procedure that fulfills the following requirements:
  
  • [S19] It is invoked for the same Device as the response for RTSP SETUP request AND
  
  • [S20] It is invoked after the Client RTSP PLAY request AND
  
  • [S21] RTSP address that was used to send it should be equal to address that was used for the RTSP DESCRIBE request AND

  • [S22] Require tag in RTSP header contains "www.onvif.org/ver20/backchannel" AND

  • If there is Device response on the RTSP TEARDOWN request then it fulfills the following requirements:
    
    • [S23] It has RTSP 200 response code.

FAIL -

• The Client failed PASS criteria.

5.1.6 AAC AUDIO BACKCHANNEL STREAMING

Test Label: Audio Backchannel Streaming - AAC

Test Case ID: AUDIOBACKCHANNELSTREAMING-4

Feature Under Test: AAC Audio Backchannel Streaming
(AudioBackchannelStreaming_AACAudioBackchannelStreaming)

Profile A Normative Reference: None

Profile C Normative Reference: None

Profile G Normative Reference: None

Profile Q Normative Reference: None

Profile S Normative Reference: None

Test Purpose: To verify that audio backchannel streaming to Device was successfully started by Client.

Pre-Requisite:
• The Network Trace Capture files contains at least one Conversation between Client and Device with audio backchannel streaming with AAC encoding.

• Device supports AAC encoding for Audio Outputs.

Test Procedure (expected to be reflected in network trace file):

1. Client invokes `GetStreamUri` request message for media profile that contains Audio Output Configuration and Audio Decoder Configuration with RTP-Unicast/UDP OR RTP-Multicast/UDP OR RTP/RTSP/TCP OR RTP-Unicast/RTSP/HTTP/TCP transport.

2. Device responds with code HTTP 200 OK and `GetStreamUriResponse` message.

3. Client invokes `RTSP DESCRIBE` request to retrieve media stream description with `Require` tag in RTSP header that contains "www.onvif.org/ver20/backchannel".

4. Device responds with code RTSP 200 OK with SDP that contains media type "audio" with session attribute "sendonly".

5. Client invokes `RTSP SETUP` request with transport parameter element to set media session parameters for audio backchannel with `Require` tag in RTSP header that contains "www.onvif.org/ver20/backchannel".

6. Device responds with code RTSP 200 OK.

7. Client invokes `RTSP PLAY` request to start media stream with `Require` tag in RTSP header that contains "www.onvif.org/ver20/backchannel".

8. Device responds with code RTSP 200 OK.

9. Client invokes `RTSP TEARDOWN` request to terminate the RTSP session with `Require` tag in RTSP header that contains "www.onvif.org/ver20/backchannel".

10. If Device sends response to RTSP TEARDOWN, it has code RTSP 200 OK.

Note: RTSP requests and RTSP response could be tunneled in HTTP if RTP-Unicast/RTSP/HTTP/TCP transport is used.

Test Result:

Note: If no `GetStreamUri` (Media Service) corresponding to detected RTSP session found, the test will be assumed as NOT DETECTED.

PASS -

• Client `RTSP DESCRIBE` request in Test Procedure fulfills the following requirements:
• [S1] **Require** tag in RTSP header contains "www.onvif.org/ver20/backchannel" AND

  Device response to the **RTSP DESCRIBE** request fulfills the following requirements:

  • [S3] It has RTSP 200 response code AND

  • [S4] SDP packet contains media type "audio" (m=audio) with session attribute "sendonly" (a=sendonly) and sessions attribute "rtpmap" with encoding name "mpeg4-generic" or "MP4A-LATM" AND

  • There is Client **RTSP SETUP** request in Test Procedure that fulfills the following requirements:

    • [S5] It is invoked for the same Device as the response for **RTSP DESCRIBE** request AND

    • [S6] It is invoked after the Client **RTSP DESCRIBE** request AND

    • [S7] RTSP address that was used to send **RTSP SETUP** is corresponds to media type "audio" with session attribute "sendonly" depending on media session attribute, general session attribute and address that was used for the **RTSP DESCRIBE** request (see [RFC 2326]) AND

    • [S8] **Require** tag in RTSP header contains "www.onvif.org/ver20/backchannel" AND

  Device response to the **RTSP SETUP** request fulfills the following requirements:

  • [S9] It has RTSP 200 response code AND

  • There is a Device response to the **GetStreamUri** request in Test Procedure that fulfills the following requirements:

    • [S10] It has HTTP 200 response code AND

    • [S11] It is received from the same Device the response for **RTSP DESCRIBE** request AND

    • [S12] It is received before the Client **RTSP DESCRIBE** request AND

    • [S13] It contains **trt:MediaUri\tt:Uri** element which value is equal to RTSP address that was used to send the **RTSP DESCRIBE** request AND

  • There is Client **RTSP PLAY** request in Test Procedure that fulfills the following requirements:

    • [S14] It is invoked for the same Device as the response for **RTSP SETUP** request AND

    • [S15] It is invoked after the Client **RTSP SETUP** request AND

    • [S16] RTSP address that was used to send it should be equal to address that was used for the **RTSP DESCRIBE** request AND
• [S17] **Require** tag in RTSP header contains "www.onvif.org/ver20/backchannel" AND

• Device response to the **RTSP PLAY** request fulfills the following requirements:
  • [S18] It has RTSP 200 response code AND

• There is **Client RTSP TEARDOWN** request in Test Procedure that fulfills the following requirements:
  • [S19] It is invoked for the same Device the response for **RTSP SETUP** request AND
  • [S20] It is invoked after the Client **RTSP PLAY** request AND
  • [S21] RTSP address that was used to send it should be equal to address that was used for the **RTSP DESCRIBE** request AND
  • [S22] **Require** tag in RTSP header contains "www.onvif.org/ver20/backchannel" AND

• If there is Device response on the **RTSP TEARDOWN** request then it fulfills the following requirements:
  • [S23] It has RTSP 200 response code.

FAIL -

• The Client failed PASS criteria.

5.2 Get Audio Decoder Configurations List Test Cases

5.2.1 Feature Level Requirement:

**Validated Feature:** Get Audio Decoder Configurations (GetAudioDecoderConfigurationsList)

**Check Condition based on Device Features:** Audio Output (Media Service) is supported by Device.

**Required Number of Devices:** 1

**Profile A Requirement:** None

**Profile C Requirement:** None

**Profile G Requirement:** None

**Profile Q Requirement:** None
Profile S Requirement: None

5.2.2 Expected Scenarios Under Test:

1. Client connects to Device to retrieve a complete list of Audio Decoders.

2. Client is considered as supporting Get Audio Decoder Configurations List if the following conditions are met:
   • Client is able to list available Get Audio Decoder Configurations List using GetAudioDecoderConfigurations operation.

3. Client is considered as NOT supporting Get Audio Decoder Configurations List if ANY of the following is TRUE:
   • No valid responses for GetAudioDecoderConfigurations request.

5.2.3 GET AUDIO DECODER CONFIGURATIONS

Test Label: Get Audio Decoder Configurations List - Get Audio Decoder Configurations

Test Case ID: GETAUDIODECODERCONFIGURATIONSLIST-1

Feature Under Test: Get Audio Decoder Configurations
(GetAudioDecoderConfigurationsList_GetAudioDecoderConfigurations)

Profile A Normative Reference: None
Profile C Normative Reference: None
Profile G Normative Reference: None
Profile Q Normative Reference: None
Profile S Normative Reference: None

Test Purpose: To verify that list of all audio decoder configurations items provided by Device is received by Client using the GetAudioDecoderConfigurations operation.

Pre-Requisite:

• The Network Trace Capture files contains at least one Conversation between Client and Device with GetAudioDecoderConfigurations operation present.

• Device supports Audio Outputs.

Test Procedure (expected to be reflected in network trace file):
1. Client invokes `GetAudioDecoderConfigurations` request message to retrieve a list of all audio decoder configurations from the Device.

2. Device responds with code HTTP 200 OK and `GetAudioDecoderConfigurationsResponse` message.

Test Result:

PASS -

- Client `GetAudioDecoderConfigurations` request messages are valid according to XML Schemas listed in Namespaces AND

- Client `GetAudioDecoderConfigurations` request in Test Procedure fulfills the following requirements:
  - [S1] `soapenv:Body` element has child element `trt:GetAudioDecoderConfigurations` AND
  - Device response to the `GetAudioDecoderConfigurations` request fulfills the following requirements:
    - [S2] It has HTTP 200 response code AND
    - [S3] `soapenv:Body` element has child element `trt:GetAudioDecoderConfigurationsResponse`.

FAIL -

- The Client failed PASS criteria.

5.3 Get Audio Output Configurations List Test Cases

5.3.1 Feature Level Requirement:

**Validated Feature**: Get Audio Output Configurations (GetAudioOutputConfigurationsList)

**Check Condition based on Device Features**: Audio Output (Media Service) is supported by Device.

**Required Number of Devices**: 1

**Profile A Requirement**: None

**Profile C Requirement**: None
Profile G Requirement: None
Profile Q Requirement: None
Profile S Requirement: None

5.3.2 Expected Scenarios Under Test:

1. Client connects to Device to retrieve a complete list of Audio Outputs.

2. Client is considered as supporting Get Audio Output Configurations List if the following conditions are met:
   - Client is able to list available Get Audio Output Configurations List using GetAudioOutputConfigurations operation.

3. Client is considered as NOT supporting Get Audio Output Configurations List if ANY of the following is TRUE:
   - No valid responses for GetAudioOutputConfigurations request.

5.3.3 GET AUDIO OUTPUT CONFIGURATIONS

Test Label: Get Audio Output Configurations List - Get Audio Output Configurations

Test Case ID: GETAUDIOOUTPUTCONFIGURATIONSLIST-1

Feature Under Test: Get Audio Output Configurations (GetAudioOutputConfigurationsList_GetAudioOutputConfigurations)

Profile A Normative Reference: None
Profile C Normative Reference: None
Profile G Normative Reference: None
Profile Q Normative Reference: None
Profile S Normative Reference: None

Test Purpose: To verify that list of all audio output configurations items provided by Device is received by Client using the GetAudioOutputConfigurations operation.

Pre-Requisite:
- The Network Trace Capture files contains at least one Conversation between Client and Device with GetAudioOutputConfigurations operation present.
• Device supports Audio Outputs.

Test Procedure (expected to be reflected in network trace file):

1. Client invokes `GetAudioOutputConfigurations` request message to retrieve a list of all audio output configurations from the Device.

2. Device responds with code HTTP 200 OK and `GetAudioOutputConfigurationsResponse` message.

Test Result:

PASS -

• Client `GetAudioOutputConfigurations` request messages are valid according to XML Schemas listed in Namespaces AND

• Client `GetAudioOutputConfigurations` request in Test Procedure fulfills the following requirements:

  • [S1] `soapenv:Body` element has child element `trt:GetAudioOutputConfigurations` AND

• Device response to the `GetAudioOutputConfigurations` request fulfills the following requirements:

  • [S2] It has HTTP 200 response code AND

  • [S3] `soapenv:Body` element has child element `trt:GetAudioOutputConfigurationsResponse`.

FAIL -

• The Client failed PASS criteria.

5.4 Get Audio Outputs List Test Cases

5.4.1 Feature Level Requirement:

Validated Feature: Get Audio Outputs (GetAudioOutputsList)

Check Condition based on Device Features: Audio Output (Media Service) is supported by Device.

Required Number of Devices: 1

Profile A Requirement: None
Profile C Requirement: None

Profile G Requirement: None

Profile Q Requirement: None

Profile S Requirement: None

5.4.2 Expected Scenarios Under Test:

1. Client connects to Device to retrieve a complete list of Audio Outputs.

2. Client is considered as supporting Get Audio Outputs List if the following conditions are met:
   • Client is able to list available Get Audio Outputs List using GetAudioOutputs operation (Media Service or Device IO Service).

3. Client is considered as NOT supporting Get Audio Outputs List if ANY of the following is TRUE:
   • No valid responses for GetAudioOutputs request (Media Service or Device IO Service).

5.4.3 GET AUDIO OUTPUTS

Test Label: Get Audio Outputs List - Get Audio Outputs

Test Case ID: GETAUDIOOUTPUTSLIST-1

Feature Under Test: Get Audio Outputs (GetAudioOutputsList_GetAudioOutputs)

Profile A Normative Reference: None

Profile C Normative Reference: None

Profile G Normative Reference: None

Profile Q Normative Reference: None

Profile S Normative Reference: None

Test Purpose: To verify that list of all audio outputs items provided by Device is received by Client using the GetAudioOutputs operation (Media Service or Device IO Service).

Pre-Requisite:

• The Network Trace Capture files contains at least one Conversation between Client and Device with GetAudioOutputs operation (Media Service or Device IO Service) present.
• Device supports Audio Outputs.

**Test Procedure (expected to be reflected in network trace file):**

1. Client invokes `GetAudioOutputs` request message (Media Service or Device IO Service) to retrieve a list of all audio outputs from the Device.

2. Device responds with code HTTP 200 OK and `GetAudioOutputsResponse` message.

**Test Result:**

**PASS -**

- Client `GetAudioOutputs` request messages are valid according to XML Schemas listed in Namespaces AND
  - Client `GetAudioOutputs` request in Test Procedure fulfills the following requirements:
    - [S1] `soapenv:Body` element has child element `trt:GetAudioOutputs` AND
  - Device response to the `GetAudioOutputs` request fulfills the following requirements:
    - [S2] It has HTTP 200 response code AND
    - [S3] `soapenv:Body` element has child element `trt:GetAudioOutputsResponse`.

**FAIL -**

- The Client failed PASS criteria.

### 5.5 Get Audio Decoder Configuration Test Cases

#### 5.5.1 Feature Level Requirement:

**Validated Feature:** Get Audio Decoder Configuration (GetAudioDecoderConfiguration)

**Check Condition based on Device Features:** Audio Output (Media Service) is supported by Device.

**Required Number of Devices:** 1

**Profile A Requirement:** None

**Profile C Requirement:** None

**Profile G Requirement:** None
Profile Q Requirement: None

Profile S Requirement: None

5.5.2 Expected Scenarios Under Test:

1. Client connects to Device to retrieve an Audio Decoder Configuration.

2. Client is considered as supporting Get Audio Decoder Configuration if the following conditions are met:

   • Client is able to get Audio Decoder Configuration using `GetAudioDecoderConfiguration` operation OR Client supports `get_audio_decoder_configurations_list.get_audio_decoder_configurations` feature.

3. Client is considered as NOT supporting Get Audio Decoder Configuration if ANY of the following is TRUE:

   • No valid responses for `GetAudioDecoderConfiguration` request.

5.5.3 GET AUDIO DECODER CONFIGURATION

Test Label: Get Audio Decoder Configuration - Get Audio Decoder Configuration

Test Case ID: GETAUDIODECODERCONFIGURATION-1

Feature Under Test: Get Audio Decoder Configuration
(GetAudioDecoderConfiguration_GetAudioDecoderConfigurationFeature)

Profile A Normative Reference: None

Profile C Normative Reference: None

Profile G Normative Reference: None

Profile Q Normative Reference: None

Profile S Normative Reference: None

Test Purpose: To verify that audio decoder configuration provided by Device is received by Client using the `GetAudioDecoderConfiguration` operation.

Pre-Requisite:

• The Network Trace Capture files contains at least one Conversation between Client and Device with `GetAudioDecoderConfiguration` operation present.
• Device supports Audio Outputs.

Test Procedure (expected to be reflected in network trace file):

1. Client invokes `GetAudioDecoderConfiguration` request message to retrieve audio decoder configuration for specified audio decoder configuration from the Device.

2. Device responds with code HTTP 200 OK and `GetAudioDecoderConfigurationResponse` message.

Test Result:

PASS -

• Client `GetAudioDecoderConfiguration` request messages are valid according to XML Schemas listed in Namespaces AND

• Client `GetAudioDecoderConfiguration` request in Test Procedure fulfills the following requirements:
  • [S1] `soapenv:Body` element has child element `trt:GetAudioDecoderConfiguration` AND

• Device response to the `GetAudioDecoderConfiguration` request fulfills the following requirements:
  • [S2] It has HTTP 200 response code AND

  • [S3] `soapenv:Body` element has child element `trt:GetAudioDecoderConfigurationResponse`.

FAIL -

• The Client failed PASS criteria.

5.6 Get Audio Output Configuration Test Cases

5.6.1 Feature Level Requirement:

Validated Feature: Get Audio Output Configuration (GetAudioOutputConfiguration)

Check Condition based on Device Features: Audio Output (Media Service) is supported by Device.

Required Number of Devices: 1

Profile A Requirement: None
Profile C Requirement: None
Profile G Requirement: None
Profile Q Requirement: None
Profile S Requirement: None

5.6.2 Expected Scenarios Under Test:

1. Client connects to Device to retrieve an Audio Output Configuration.

2. Client is considered as supporting Get Audio Output Configuration if the following conditions are met:
   - Client is able to get Audio Output Configuration using `GetAudioOutputConfiguration` operation (Media Service OR Device IO Service) OR Client supports `get_audio_output_configurations_list.get_audio_output_configurations` feature.

3. Client is considered as NOT supporting Get Audio Output Configuration if ANY of the following is TRUE:
   - No valid responses for `GetAudioOutputConfiguration` request.

5.6.3 GET AUDIO OUTPUT CONFIGURATION

Test Label: Get Audio Output Configuration - Get Audio Output Configuration

Test Case ID: GETAUDIOOUTPUTCONFIGURATION-1

Feature Under Test: Get Audio Output Configuration
(GetAudioOutputConfiguration_GetAudioOutputConfigurationFeature)

Profile A Normative Reference: None
Profile C Normative Reference: None
Profile G Normative Reference: None
Profile Q Normative Reference: None
Profile S Normative Reference: None

Test Purpose: To verify that audio output configuration provided by Device is received by Client using the `GetAudioOutputConfiguration` operation.
Pre-Requisite:

- The Network Trace Capture files contains at least one Conversation between Client and Device with `GetAudioOutputConfiguration` operation present.
- Device supports Audio Outputs.

Test Procedure (expected to be reflected in network trace file):

1. Client invokes `GetAudioOutputConfiguration` request message to retrieve audio output configuration for specified audio output configuration from the Device.
2. Device responds with code HTTP 200 OK and `GetAudioOutputConfigurationResponse` message.

Test Result:

PASS -

- Client `GetAudioOutputConfiguration` request messages are valid according to XML Schemas listed in Namespaces AND
- Client `GetAudioOutputConfiguration` request in Test Procedure fulfills the following requirements:
  - [S1] `soapenv:Body` element has child element `trt:GetAudioOutputConfiguration` AND
- Device response to the `GetAudioOutputConfiguration` request fulfills the following requirements:
  - [S2] It has HTTP 200 response code AND
  - [S3] `soapenv:Body` element has child element `trt:GetAudioOutputConfigurationResponse`.

FAIL -

- The Client failed PASS criteria.

5.7 Profile Configuration for Audio Backchannel Test Cases

5.7.1 Feature Level Requirement:

Validated Feature: Profile Configuration for Audio Backchannel (ProfileConfigurationForAudioBackchannel)
Check Condition based on Device Features: Audio Output (Media Service) is supported by Device.

Required Number of Devices: 1

Profile A Requirement: None

Profile C Requirement: None

Profile G Requirement: None

Profile Q Requirement: None

Profile S Requirement: None

5.7.2 Expected Scenarios Under Test:

1. Client connects to Device to configure profile for Audio Backchannel streaming.

2. Client is considered as supporting Profile Configuration for Audio Backchannel details if the following conditions are met:
   - Client is able to get compatible Audio Output Configuration using GetCompatibleAudioOutputConfigurations operation for specified profile AND
   - Client is able to add or replace Audio Output Configuration in media profile using AddAudioOutputConfiguration operation for specified audio output configuration and compatible with specified profile AND
   - Client may be able to remove Audio Output Configuration from media profile using RemoveAudioOutputConfiguration operation for specified profile AND
   - Client is able to get compatible Audio Decoder Configuration using GetCompatibleAudioDecoderConfigurations operation for specified profile AND
   - Client is able to add or replace Audio Decoder Configuration in media profile using AddAudioDecoderConfiguration operation for specified audio decoder configuration and compatible with specified profile AND
   - Client may be able to remove Audio Decoder Configuration from media profile using RemoveAudioDecoderConfiguration operation for specified profile.

3. Client is considered as NOT supporting Profile Configuration for Audio Backchannel if ANY of the following is TRUE:
   - No valid responses for GetCompatibleAudioOutputConfigurations request OR
• No valid responses for AddAudioOutputConfiguration request OR

• Client tries to invoke AddAudioOutputConfiguration request without GetCompatibleAudioOutputConfigurations request for specified profile OR

• Detected RemoveAudioOutputConfiguration request attempt have failed OR

• No valid responses for GetCompatibleAudioDecoderConfigurations request OR

• No valid responses for AddAudioDecoderConfiguration request OR

• Client tries to invoke AddAudioDecoderConfiguration request without GetCompatibleAudioDecoderConfigurations request for specified profile OR

• Detected RemoveAudioDecoderConfiguration request attempt has failed.

5.7.3 GET COMPATIBLE AUDIO OUTPUT CONFIGURATIONS

Test Label: Profile Configuration for Audio Backchannel - Get Compatible Audio Output Configurations

Test Case ID: PROFILECONFIGURATIONFORAUDIOBACKCHANNEL-1

Feature Under Test: Get Compatible Audio Output Configurations
(ProfileConfigurationForAudioBackchannel_GetCompatibleAudioOutputConfigurations)

Profile A Normative Reference: None

Profile C Normative Reference: None

Profile G Normative Reference: None

Profile Q Normative Reference: None

Profile S Normative Reference: None

Test Purpose: To verify that compatible audio output configurations provided by Device for specified media profile is received by Client using the GetCompatibleAudioOutputConfigurations operation.

Pre-Requisite:

• The Network Trace Capture files contains at least one Conversation between Client and Device with GetCompatibleAudioOutputConfigurations operation present.
• Device supports Audio Outputs.

Test Procedure (expected to be reflected in network trace file):

1. Client invokes GetCompatibleAudioOutputConfigurations request message to retrieve compatible audio output configurations for specified media profile from the Device.

2. Device responds with code HTTP 200 OK and GetCompatibleAudioOutputConfigurationsResponse message.

Test Result:

PASS -

• Client GetCompatibleAudioOutputConfigurations request messages are valid according to XML Schemas listed in Namespaces AND

• Client GetCompatibleAudioOutputConfigurations request in Test Procedure fulfills the following requirements:
  • [S1] soapenv:Body element has child element trt:GetCompatibleAudioOutputConfigurations AND

• Device response to the GetCompatibleAudioOutputConfigurations request fulfills the following requirements:
  • [S2] It has HTTP 200 response code AND
  • [S3] soapenv:Body element has child element trt:GetCompatibleAudioOutputConfigurationsResponse.

FAIL -

• The Client failed PASS criteria.

5.7.4 ADD AUDIO OUTPUT CONFIGURATION

Test Label: Profile Configuration for Audio Backchannel - Add Audio Output Configuration

Test Case ID: PROFILECONFIGURATIONFORAUDIOBACKCHANNEL-2

Feature Under Test: Add Audio Output Configuration
(ProfileConfigurationForAudioBackchannel_AddAudioOutputConfiguration)

Profile A Normative Reference: None

Profile C Normative Reference: None
Profile G Normative Reference: None

Profile Q Normative Reference: None

Profile S Normative Reference: None

Test Purpose: To verify that Client is able to add or replace audio output configurations on a Device for specified audio output configuration and compatible with specified profile using the AddAudioOutputConfiguration operation.

Pre-Requisite:

- The Network Trace Capture files contains at least one Conversation between Client and Device with AddAudioOutputConfiguration operation present.
- Device supports Audio Outputs.

Test Procedure (expected to be reflected in network trace file):

1. Client invokes GetCompatibleAudioOutputConfigurations request message to retrieve compatible audio output configurations for specified media profile from the Device.

2. Device responds with code HTTP 200 OK and GetCompatibleAudioOutputConfigurationsResponse message.

3. Client invokes AddAudioOutputConfiguration request message to add or replace audio output configurations for specified media profile and with audio output configuration token that was received in GetCompatibleAudioOutputConfigurationsResponse message from the Device for the same media profile.

Test Result:

PASS -

- Client AddAudioOutputConfiguration request messages are valid according to XML Schemas listed in Namespaces AND

- Client AddAudioOutputConfiguration request in Test Procedure fulfills the following requirements:
  - [S1] soapenv:Body element has child element trt:AddAudioOutputConfiguration AND

- Device response to the AddAudioOutputConfiguration request fulfills the following requirements:
• [S2] It has HTTP 200 response code AND

• [S3] soapenv:Body element has child element trt:AddAudioOutputConfigurationResponse AND

• There is Client GetCompatibleAudioOutputConfigurations request in Test Procedure that fulfills the following requirements:

• [S4] It is invoked for the same Device the response for AddAudioOutputConfiguration request AND

• [S5] It is invoked before the Client AddAudioOutputConfiguration request AND

• [S6] trt:ProfileToken element value is equal to trt:ProfileToken element from the AddAudioOutputConfiguration request AND

• [S7] It is the last GetCompatibleAudioOutputConfigurations request which corresponds [S4], [S5] AND [S6] AND

• Device response to the GetCompatibleAudioOutputConfigurations request fulfills the following requirements:

• [S8] It has HTTP 200 response code AND

• [S9] soapenv:Body element has child element trt:GetCompatibleAudioOutputConfigurationsResponse AND

• [S10] It contains trt:Configurations/@token attribute value equal to trt:ConfigurationToken from the AddAudioOutputConfiguration request messages.

FAIL -

• The Client failed PASS criteria.

5.7.5 REMOVE AUDIO OUTPUT CONFIGURATION

Test Label: Profile Configuration for Audio Backchannel - Remove Audio Output Configuration

Test Case ID: PROFILECONFIGURATIONFORAUDIOPBACKCHANNEL-3

Feature Under Test: Remove Audio Output Configuration (ProfileConfigurationForAudioBackchannel_RemoveAudioOutputConfiguration)

Profile A Normative Reference: None

Profile C Normative Reference: None
Profile G Normative Reference: None

Profile Q Normative Reference: None

Profile S Normative Reference: None

Test Purpose: To verify that Client is able to remove audio output configurations on a Device from specified profile using the RemoveAudioOutputConfiguration operation.

Pre-Requisite:

• The Network Trace Capture files contains at least one Conversation between Client and Device with RemoveAudioOutputConfiguration operation present.

• Device supports Audio Outputs.

Test Procedure (expected to be reflected in network trace file):

1. Client invokes RemoveAudioOutputConfiguration request message to remove audio output configurations from specified media profile on the Device.

2. Device responds with code HTTP 200 OK and RemoveAudioOutputConfigurationResponse message.

Test Result:

PASS -

• Client RemoveAudioOutputConfiguration request messages are valid according to XML Schemas listed in Namespaces AND

• Client RemoveAudioOutputConfiguration request in Test Procedure fulfills the following requirements:

  • [S1] soapenv:Body element has child element trt:RemoveAudioOutputConfiguration AND

• Device response to the RemoveAudioOutputConfiguration request fulfills the following requirements:

  • [S2] It has HTTP 200 response code AND

  • [S3] soapenv:Body element has child element trt:RemoveAudioOutputConfigurationResponse.

FAIL -

• The Client failed PASS criteria.
5.7.6 GET COMPATIBLE AUDIO DECODER CONFIGURATIONS

Test Label: Profile Configuration for Audio Backchannel - Get Compatible Audio Decoder Configurations

Test Case ID: PROFILECONFIGURATIONFORAUDIOBACKCHANNEL-4

Feature Under Test: Get Compatible Audio Decoder Configurations
(ProfileConfigurationForAudioBackchannel_GetCompatibleAudioDecoderConfigurations)

Profile A Normative Reference: None

Profile C Normative Reference: None

Profile G Normative Reference: None

Profile Q Normative Reference: None

Profile S Normative Reference: None

Test Purpose: To verify that compatible audio decoder configurations provided by Device for specified media profile is received by Client using the GetCompatibleAudioDecoderConfigurations operation.

Pre-Requisite:

• The Network Trace Capture files contains at least one Conversation between Client and Device with GetCompatibleAudioDecoderConfigurations operation present.

• Device supports Audio Decoders.

Test Procedure (expected to be reflected in network trace file):

1. Client invokes GetCompatibleAudioDecoderConfigurations request message to retrieve compatible audio decoder configurations for specified media profile from the Device.

2. Device responds with code HTTP 200 OK and GetCompatibleAudioDecoderConfigurationsResponse message.

Test Result:

PASS -

• Client GetCompatibleAudioDecoderConfigurations request messages are valid according to XML Schemas listed in Namespaces AND
• Client `GetCompatibleAudioDecoderConfigurations` request in Test Procedure fulfills the following requirements:
  
  • [S1] `soapenv:Body` element has child element `trt:GetCompatibleAudioDecoderConfigurations` AND

  • Device response to the `GetCompatibleAudioDecoderConfigurations` request fulfills the following requirements:

  • [S2] It has HTTP 200 response code AND

  • [S3] `soapenv:Body` element has child element `trt:GetCompatibleAudioDecoderConfigurationsResponse`.

FAIL -

• The Client failed PASS criteria.

5.7.7 ADD AUDIO DECODER CONFIGURATION

Test Label: Profile Configuration for Audio Backchannel - Add Audio Decoder Configuration

Test Case ID: PROFILECONFIGURATIONFORAUDIOBACKCHANNEL-5

Feature Under Test: Add Audio Decoder Configuration
(ProfileConfigurationForAudioBackchannel_AddAudioDecoderConfiguration)

Profile A Normative Reference: None

Profile C Normative Reference: None

Profile G Normative Reference: None

Profile Q Normative Reference: None

Profile S Normative Reference: None

Test Purpose: To verify that Client is able to add or replace audio decoder configurations on a Device for specified audio decoder configuration and compatible with specified profile using the `AddAudioDecoderConfiguration` operation.

Pre-Requisite:

• The Network Trace Capture files contains at least one Conversation between Client and Device with `AddAudioDecoderConfiguration` operation present.

• Device supports Audio Decoders.
Test Procedure (expected to be reflected in network trace file):

1. Client invokes `GetCompatibleAudioDecoderConfigurations` request message to retrieve compatible audio decoder configurations for specified media profile from the Device.

2. Device responds with code HTTP 200 OK and `GetCompatibleAudioDecoderConfigurationsResponse` message.

3. Client invokes `AddAudioDecoderConfiguration` request message to add or replace audio decoder configurations for specified media profile and with audio decoder configuration token that was received in `GetCompatibleAudioDecoderConfigurationsResponse` message from the Device for the same media profile.

Test Result:

PASS -

• Client `AddAudioDecoderConfiguration` request messages are valid according to XML Schemas listed in Namespaces AND

• Client `AddAudioDecoderConfiguration` request in Test Procedure fulfills the following requirements:
  - [S1] `soapenv:Body` element has child element `trt:AddAudioDecoderConfiguration` AND

• Device response to the `AddAudioDecoderConfiguration` request fulfills the following requirements:
  - [S2] It has HTTP 200 response code AND

  - [S3] `soapenv:Body` element has child element `trt:AddAudioDecoderConfigurationResponse` AND

• There is Client `GetCompatibleAudioDecoderConfigurations` request in Test Procedure that fulfills the following requirements:
  - [S4] It is invoked for the same Device as the response for `AddAudioDecoderConfiguration` request AND

  - [S5] It is invoked before the Client `AddAudioDecoderConfiguration` request AND

  - [S6] `trt:ProfileToken` element value is equal to `trt:ProfileToken` element from the `AddAudioDecoderConfiguration` request AND
• [S7] It is the last GetCompatibleAudioDecoderConfigurations request which corresponds [S4], [S5] AND [S6] AND

• Device response to the GetCompatibleAudioDecoderConfigurations request fulfills the following requirements:

  • [S8] It has HTTP 200 response code AND

  • [S9] soapenv:Body element has child element trt:GetCompatibleAudioDecoderConfigurationsResponse AND

  • [S10] It contains trt:Configurations/@token attribute value equal to trt:ConfigurationToken from the AddAudioDecoderConfiguration request messages.

FAIL -

• The Client failed PASS criteria.

5.7.8 REMOVE AUDIO DECODER CONFIGURATION

Test Label: Profile Configuration for Audio Backchannel - Remove Audio Decoder Configuration

Test Case ID: PROFILECONFIGURATIONFORAUDIOBACKCHANNEL-6

Feature Under Test: Remove Audio Decoder Configuration (ProfileConfigurationForAudioBackchannel_RemoveAudioDecoderConfiguration)

Profile A Normative Reference: None

Profile C Normative Reference: None

Profile G Normative Reference: None

Profile Q Normative Reference: None

Profile S Normative Reference: None

Test Purpose: To verify that Client is able to remove audio decoder configurations on a Device from specified profile using the RemoveAudioDecoderConfiguration operation.

Pre-Requisite:

• The Network Trace Capture files contains at least one Conversation between Client and Device with RemoveAudioDecoderConfiguration operation present.

• Device supports Audio Decoders.
Test Procedure (expected to be reflected in network trace file):

1. Client invokes **RemoveAudioDecoderConfiguration** request message to remove audio decoder configurations from specified media profile on the Device.

2. Device responds with code HTTP 200 OK and **RemoveAudioDecoderConfigurationResponse** message.

Test Result:

**PASS** -

- Client **RemoveAudioDecoderConfiguration** request messages are valid according to XML Schemas listed in **Namespaces** AND

- Client **RemoveAudioDecoderConfiguration** request in Test Procedure fulfills the following requirements:
  
  - [S1] soapenv:Body element has child element **trt:RemoveAudioDecoderConfiguration** AND

- Device response to the **RemoveAudioDecoderConfiguration** request fulfills the following requirements:
  
  - [S2] It has HTTP 200 response code AND

  - [S3] soapenv:Body element has child element **trt:RemoveAudioDecoderConfigurationResponse**.

**FAIL** -

- The Client failed PASS criteria.

### 5.8 Configure Audio Decoder Configuration Test Cases

#### 5.8.1 Feature Level Requirement:

**Validated Feature:** Configure Audio Decoder Configuration (SetAudioDecoderConfiguration)

**Check Condition based on Device Features:** Audio Output (Media Service) is supported by Device.

**Required Number of Devices:** 1

**Profile A Requirement:** None

**Profile C Requirement:** None
Profile G Requirement: None

Profile Q Requirement: None

Profile S Requirement: None

5.8.2 Expected Scenarios Under Test:

1. Client connects to Device to change Audio Decoder Configuration settings.

2. Client is considered as supporting Configure Audio Decoder Configuration if the following conditions are met:
   - Client is able to change Audio Decoder Configuration settings using `SetAudioDecoderConfiguration` operation.

3. Client is considered as NOT supporting Configure Audio Decoder Configuration if ANY of the following is TRUE:
   - No valid responses for `SetAudioDecoderConfiguration` request.

5.8.3 SET AUDIO DECODER CONFIGURATION

Test Label: Configure Audio Decoder Configuration - Set Audio Decoder Configuration

Test Case ID: SETAUDIODECODERCONFIGURATION-1

Feature Under Test: Set Audio Decoder Configuration (SetAudioDecoderConfiguration_SetAudioDecoderConfigurationRequest)

Profile A Normative Reference: None

Profile C Normative Reference: None

Profile G Normative Reference: None

Profile Q Normative Reference: None

Profile S Normative Reference: None

Test Purpose: To verify that Client is able to change audio decoder configuration provided by Device using the `SetAudioDecoderConfiguration` operation.

Pre-Requisite:

- The Network Trace Capture files contains at least one Conversation between Client and Device with `SetAudioDecoderConfiguration` operation present.
- Device supports Audio Outputs.

**Test Procedure (expected to be reflected in network trace file):**

1. Client invokes `SetAudioDecoderConfiguration` request message to change audio decoder configuration on the Device.

2. Device responds with code HTTP 200 OK and `SetAudioDecoderConfigurationResponse` message.

**Test Result:**

**PASS -**

- Client `SetAudioDecoderConfiguration` request messages are valid according to XML Schemas listed in Namespaces AND

- Client `SetAudioDecoderConfiguration` request in Test Procedure fulfills the following requirements:
  - [S1] `soapenv:Body` element has child element `trt:SetAudioDecoderConfiguration` AND

- Device response to the `SetAudioDecoderConfiguration` request fulfills the following requirements:
  - [S2] It has HTTP 200 response code AND

**FAIL -**

- The Client failed PASS criteria.

5.9 Configure Audio Output Configuration Test Cases

5.9.1 Feature Level Requirement:

**Validated Feature:** Configure Audio Output Configuration (SetAudioOutputConfiguration)

**Check Condition based on Device Features:** Audio Output (Media Service) is supported by Device.

**Required Number of Devices:** 1

**Profile A Requirement:** None
Profile C Requirement: None
Profile G Requirement: None
Profile Q Requirement: None
Profile S Requirement: None

5.9.2 Expected Scenarios Under Test:

1. Client connects to Device to change audio output configuration.

2. Client is considered as supporting Configure Audio Output Configuration if the following conditions are met:
   - Client is able to retrieve audio output configuration options using `GetAudioOutputConfigurationOptions` operation AND
   - Client is able to change audio output configuration settings using `SetAudioOutputConfiguration` operation.

3. Client is considered as NOT supporting Configure Audio Output Configuration if ANY of the following is TRUE:
   - No valid responses for `GetAudioOutputConfigurationOptions` request OR
   - No valid responses for `SetAudioOutputConfiguration` request.

5.9.3 GET AUDIO OUTPUT CONFIGURATION OPTIONS

Test Label: Configure Audio Output Configuration - Get Audio Output Configuration Options

Test Case ID: SETAUDIOOUTPUTCONFIGURATION-1

Feature Under Test: Get Audio Output Configuration Options
(SetAudioOutputConfiguration_GetAudioOutputConfigurationOptions)

Profile A Normative Reference: None
Profile C Normative Reference: None
Profile G Normative Reference: None
Profile Q Normative Reference: None
Profile S Normative Reference: None
Test Purpose: To verify that Client is able to get audio output configuration options provided by Device using the GetAudioOutputConfigurationOptions operation.

Pre-Requisite:

- The Network Trace Capture files contains at least one Conversation between Client and Device with GetAudioOutputConfigurationOptions operation present.
- Device supports Audio Outputs.

Test Procedure (expected to be reflected in network trace file):

1. Client invokes GetAudioOutputConfigurationOptions request message to retrieve audio output configuration options for the Device.
2. Device responds with code HTTP 200 OK and GetAudioOutputConfigurationOptionsResponse message.

Test Result:

PASS -

• Client GetAudioOutputConfigurationOptions request messages are valid according to XML Schemas listed in Namespaces AND

• Client GetAudioOutputConfigurationOptions request in Test Procedure fulfills the following requirements:
  • [S1] soapenv:Body element has child element trt:GetAudioOutputConfigurationOptions AND

• Device response to the GetAudioOutputConfigurationOptions request fulfills the following requirements:
  • [S2] It has HTTP 200 response code AND
  • [S3] soapenv:Body element has child element trt:GetAudioOutputConfigurationOptionsResponse.

FAIL -

• The Client failed PASS criteria.

5.9.4 SET AUDIO OUTPUT CONFIGURATION

Test Label: Configure Audio Output Configuration - Set Audio Output Configuration
Test Case ID: SETAUDIOUTPUTCONFIGURATION-2

Feature Under Test: Set Audio Output Configuration
(SetAudioOutputConfiguration_SetAudioOutputConfigurationRequest)

Profile A Normative Reference: None

Profile C Normative Reference: None

Profile G Normative Reference: None

Profile Q Normative Reference: None

Profile S Normative Reference: None

Test Purpose: To verify that Client is able to change audio output configuration provided by Device using the SetAudioOutputConfiguration operation.

Pre-Requisite:

- The Network Trace Capture files contains at least one Conversation between Client and Device with SetAudioOutputConfiguration operation present.
- Device supports Audio Outputs.

Test Procedure (expected to be reflected in network trace file):

1. Client invokes SetAudioOutputConfiguration request message to change audio output configuration on the Device.

2. Device responds with code HTTP 200 OK and SetAudioOutputConfigurationResponse message.

Test Result:

PASS -

- Client SetAudioOutputConfiguration request messages are valid according to XML Schemas listed in Namespaces AND
- Client SetAudioOutputConfiguration request in Test Procedure fulfills the following requirements:
  - [S1] soapenv:Body element has child element trt:SetAudioOutputConfiguration AND
  - Device response to the SetAudioOutputConfiguration request fulfills the following requirements:
- [S2] It has HTTP 200 response code AND

FAIL -

- The Client failed PASS criteria.
6 Test Cases for Imaging

6.1 Get Imaging Capabilities Test Cases

6.1.1 Feature Level Requirement:

Validated Feature: Get Imaging Capabilities (GetImagingCapabilities)

Check Condition based on Device Features: Imaging Service is supported by Device.

Required Number of Devices: 1

6.1.2 Expected Scenarios Under Test:

1. Client connects to Device to retrieve a imaging capabilities.

2. Client is considered as supporting Get Imaging Capabilities if the following conditions are met:
   • Client is able to retrieve a imaging capabilities using GetCapabilities operation OR GetServiceCapabilities operation (Imaging Service) OR supports get_services_capabilities.get_services feature.

3. Client is considered as NOT supporting Get Imaging Capabilities if ANY of the following is TRUE:
   • No valid responses for GetCapabilities request if detected AND Device supportes GetCapabilities feature OR
   • No valid responses for GetServiceCapabilities request (Imaging Service) if detected AND Device supportes GetServices feature
   • No valid responses for GetCapabilities request AND no valid responses for GetServiceCapabilities request (Imaging Service) AND get_services_capabilities.get_services feature is not supported by Client.

6.1.3 GET CAPABILITIES

Test Label: Get Imaging Capabilities - Get Capabilities

Test Case ID: GETIMAGINGCAPABILITIES-1

Feature Under Test: Get Imaging Capabilities using Get Capabilities (GetImagingCapabilities_GetImgCapabilities)
Test Purpose: To verify that imaging capabilities provided by Device is received by Client using the GetCapabilities operation.

Pre-Requisite:

- The Network Trace Capture files contains at least one Conversation between Client and Device with GetCapabilities operation with tds:Category element equal to "All" OR "Imaging" OR without any tds:Category element present.
- Device supports Imaging Service.

Test Procedure (expected to be reflected in network trace file):

1. Client invokes GetCapabilities request message with tds:Category element equal to "All" OR "Imaging" OR without any tds:Category element to retrieve imaging capabilities from the Device.
2. Device responds with code HTTP 200 OK and GetCapabilitiesResponse message.

Test Result:

PASS -

- Client GetCapabilities request messages are valid according to XML Schemas listed in Namespaces AND
- Client GetCapabilities request in Test Procedure fulfills the following requirements:
  - [S1] soapenv:Body element has child element tds:GetCapabilities AND
  - [S2] IF it contains any tds:Category element THEN it contains tds:Category element equal to "All" OR "Imaging" AND
- Device response on the GetCapabilities request fulfills the following requirements:
  - [S3] It has HTTP 200 response code AND

FAIL -

- The Client failed PASS criteria.

6.1.4 GET SERVICE CAPABILITIES

Test Label: Get Imaging Capabilities - Get Service Capabilities

Test Case ID: GETIMAGINGCAPAbILITIES-2

Feature Under Test: Get Imaging Capabilities using Get Service Capabilities (GetImagingCapabilities_GetImgServiceCapabilities)
**Test Purpose:** To verify that imaging capabilities provided by Device is received by Client using the `GetServiceCapabilities` operation.

**Pre-Requisite:**

- The Network Trace Capture files contains at least one Conversation between Client and Device with `GetServiceCapabilities` operation for Imaging Service present.
- Device supports Imaging Service.

**Test Procedure (expected to be reflected in network trace file):**

1. Client invokes `GetServiceCapabilities` request message to retrieve imaging capabilities from the Device.
2. Device responds with code HTTP 200 OK and `GetServiceCapabilitiesResponse` message.

**Test Result:**

**PASS -**

- Client `GetServiceCapabilities` request messages are valid according to XML Schemas listed in Namespaces AND
- Client `GetServiceCapabilities` request in Test Procedure fulfills the following requirements:
  - [S1] `soapenv:Body` element has child element `timg:GetServiceCapabilities` AND
- Device response on the `GetServiceCapabilities` request fulfills the following requirements:
  - [S2] It has HTTP 200 response code AND
  - [S3] `soapenv:Body` element has child element `timg:GetServiceCapabilitiesResponse`.

**FAIL -**

- The Client failed PASS criteria.
7 Test Cases for OSD for Media

7.1 Get OSD Configuration Test Cases

7.1.1 Feature Level Requirement:

Validated Feature: Get OSD Configuration (GetOSD)

Check Condition based on Device Features: TO BE DISCUSSED

Required Number of Devices: 1

7.1.2 Expected Scenarios Under Test:

1. Client connects to Device to retrieve a OSD configuration.

2. Client is considered as supporting Get OSD Configuration if the following conditions are met:
   - Client is able to retrieve a OSD configuration using GetOSD operation.

3. Client is considered as NOT supporting Get OSD Configuration if ANY of the following is TRUE:
   - No valid responses for GetOSD request.

7.1.3 GET OSD

Test Label: Get OSD - Get OSD

Test Case ID: GETOSD-1

Feature Under Test: Get OSD (GetOSD_GetOsd)

Test Purpose: To verify that OSD list for Device is received by Client using the GetOSD operation.

Pre-Requisite:

- The Network Trace Capture files contains at least one Conversation between Client and Device with GetOSD operation present.
- Device supports Media Service.

Test Procedure (expected to be reflected in network trace file):
1. Client invokes `GetOSD` request message to retrieve OSD configuration from the Device.

2. Device responds with code HTTP 200 OK and `GetOSDResponse` message.

**Test Result:**

**PASS -**

- Client `GetOSD` request messages are valid according to XML Schemas listed in Namespaces AND
- Client `GetOSD` request in Test Procedure fulfills the following requirements:
  - [S1] `soapenv:Body` element has child element `trt:GetOSD` AND
  - [S2] `trt:OSDToken` element has non-empty string value of specific OSD token AND
- Device response on the `GetOSD` request fulfills the following requirements:
  - [S3] It has HTTP 200 response code AND

**FAIL -**

- The Client failed PASS criteria.

7.2 Get OSD List Test Cases

7.2.1 Feature Level Requirement:

**Validated Feature:** Get OSD List (GetOSDs)

**Check Condition based on Device Features:** TO BE DISCUSSED

**Required Number of Devices:** 1

7.2.2 Expected Scenarios Under Test:

1. Client connects to Device to retrieve a OSD list.
2. Client is considered as supporting Get OSD List if the following conditions are met:
   - Client is able to retrieve a OSD list using `GetOSDs` operation.
3. Client is considered as NOT supporting Get OSD List if ANY of the following is TRUE:
7.2.3 GET OS辦

Test Label: Get OS辦 - Get OS辦

Test Case ID: GETOSDS-1

Feature Under Test: Get OS辦 (GetOSDs_GetOsds)

Test Purpose: To verify that OSD list for Device is received by Client using the GetOSDs operation.

Pre-Requisite:

- The Network Trace Capture files contains at least one Conversation between Client and Device with GetOSDs operation present.
- Device supports Media Service.

Test Procedure (expected to be reflected in network trace file):

1. Client invokes GetOSDs request message to retrieve OSD list from the Device.
2. Device responds with code HTTP 200 OK and GetOSDsResponse message.

Test Result:

PASS -

- Client GetOSDs request messages are valid according to XML Schemas listed in Namespaces AND

- Client GetOSDs request in Test Procedure fulfills the following requirements:
  - [S1] soapenv:Body element has child element trt:GetOSDs AND
  - If it contains trt:ConfigurationToken element then it fulfills the following requirements (else skip the check):
    - [S2] trt:ConfigurationToken element has non-empty string value of specific video source configuraton token AND
  - Device response on the GetOSDs request fulfills the following requirements:
    - [S3] It has HTTP 200 response code AND
FAIL -

- The Client failed PASS criteria.

7.3 OSD Configuration Test Cases

7.3.1 Feature Level Requirement:

**Validated Feature:** OSD Configuration (SetOSD)

**Check Condition based on Device Features:** TO BE DISCUSSED

**Required Number of Devices:** 1

7.3.2 Expected Scenarios Under Test:

1. Client connects to Device to change OSD settings.

2. Client is considered as supporting OSD Configuration if the following conditions are met:
   - Client is able to retrieve a OSD options using *GetOSDOptions* operation AND
   - Client is able to change a OSD settings using *SetOSD* operation.

3. Client is considered as NOT supporting OSD Configuration if ANY of the following is TRUE:
   - No valid responses for *GetOSDOptions* request OR
   - No valid responses for *SetOSD* request.

7.3.3 GET OSD OPTIONS

**Test Label:** OSD Configuration - Get OSD Options

**Test Case ID:** SETOSD-1

**Feature Under Test:** Get OSD Options (SetOSD_GetOsdOptions)

**Test Purpose:** To verify that OSD options for Device is received by Client using the *GetOSDOptions* operation.

**Pre-Requisite:**

- The Network Trace Capture files contains at least one Conversation between Client and Device with *GetOSDOptions* operation present.
ONVIF Other Features Client Test Specification Version 19.12

• Device supports Media Service.

Test Procedure (expected to be reflected in network trace file):

1. Client invokes GetOSDOptions request message to retrieve OSD options for specified Video Source Configuration from the Device.

2. Device responds with code HTTP 200 OK and GetOSDOptionsResponse message.

Test Result:

PASS -

• Client GetOSDOptions request messages are valid according to XML Schemas listed in Namespaces AND

• Client GetOSDOptions request in Test Procedure fulfills the following requirements:
  • [S1] soapenv:Body element has child element trt:GetOSDOptions AND
  • [S2] trt:ConfigurationToken element has non-empty string value of specific video source configuration token AND

• Device response on the GetOSDOptions request fulfills the following requirements:
  • [S3] It has HTTP 200 response code AND

FAIL -

• The Client failed PASS criteria.

7.3.4 SET OSD

Test Label: OSD Configuration - Set OSD

Test Case ID: SETOSD-2

Feature Under Test: Set OSD (SetOSD_SetOs)

Test Purpose: To verify that Client is able to change OSD settings on Device using the SetOSD operation.

Pre-Requisite:

• The Network Trace Capture files contains at least one Conversation between Client and Device with SetOSD operation present.
• Device supports Media Service.

**Test Procedure (expected to be reflected in network trace file):**

1. Client invokes **GetOSDOptions** request message to retrieve OSD options for specified Video Source Configuration from the Device.

2. Device responds with code HTTP 200 OK and **GetOSDOptionsResponse** message.

3. Client invokes **SetOSD** request message to change OSD settings for specified OSD which are correspond to the received options on the Device.

4. Device responds with code HTTP 200 OK and **SetOSDResponse** message.

**Test Result:**

**PASS -**

• Client **SetOSD** request messages are valid according to XML Schemas listed in Namespaces AND

• Client **SetOSD** request in Test Procedure fulfills the following requirements:

  • [S1] **soapenv:Body** element has child element **trt:SetOSD** AND

  • Device response on the **SetOSD** request fulfills the following requirements:

    • [S2] It has HTTP 200 response code AND

    • [S3] **soapenv:Body** element has child element **trt:SetOSDResponse** AND

• There is a Client **GetOSDOptions** request in Test Procedure fulfills the following requirements:

  • [S4] It invoked for the same Device as for the Client **SetOSD** request AND

  • [S5] It invoked before the Client **SetOSD** request AND

  • [S6] **trt:ConfigurationToken** element value is equal to **trt:OSD/tt:VideoSourceConfigurationToken** element from the **SetOSD** request AND

  • Device response on the **GetOSDOptions** request fulfills the following requirements:

    • [S7] It has HTTP 200 response code.

**FAIL -**

• The Client failed PASS criteria.
8 Test Cases for Security Configuration

8.1 Enabled TLS Versions Configuration Test Cases

8.1.1 Feature Level Requirement:

Validated Feature: Enabled TLS Versions Configuration (EnabledTLSVersionsConfiguration)

Check Condition based on Device Features: Enabled TLS Versions (Security Configuration Service) is supported by the Device.

Required Number of Devices: 1

Profile A Requirement: None

Profile C Requirement: None

Profile G Requirement: None

Profile Q Requirement: None

Profile S Requirement: None

8.1.2 Expected Scenarios Under Test:

1. Client connects to Device configure enabled TLS versions on Device.

2. Client is considered as supporting Enabled TLS Versions Configuration if the following conditions are met:
   - Client is able to retrieve supported TLS versions using GetServices operation with IncludeCapability = true or using GetServiceCapabilities operation for Security Configuration Service if Device supports Enabled TLS Versions feature AND
   - Client is able to setup enabled TLS versions using SetEnabledTLSVersions operation if Device supports Enabled TLS Versions feature.

3. Client is considered as NOT supporting Enabled TLS Versions Configuration if ANY of the following is TRUE:
   - No valid responses for GetServices request with IncludeCapability = true or for GetServiceCapabilities request for Security Configuration Service if detected if Device supports Enabled TLS Versions feature OR
8.1.3 Get Enabled TLS Versions

Test Case ID: ENABLEDTLSVERSIONSCONFIGURATION-1

Feature Under Test: Get Enabled TLS Versions
(EnabledTLSVersionsConfiguration_GetEnabledTLSVersions)

Profile A Normative Reference: None

Profile C Normative Reference: None

Profile G Normative Reference: None

Profile Q Normative Reference: None

Profile S Normative Reference: None

Test Purpose: To verify that Client is able to get currently enabled TLS versions from Device using GetEnabledTLSVersions operation.

Pre-Requisite:

- The Network Trace Capture files contains at least one Conversation between Client and Device with GetEnabledTLSVersions operation present.
- Device supports Enabled TLS Versions (Security Configuration Service).

Test Procedure (expected to be reflected in network trace file):

1. Client invokes GetEnabledTLSVersions request message to get currently enabled TLS versions from Device.

2. Device responds with code HTTP 200 OK and GetEnabledTLSVersionsResponse message.

Test Result:

PASS -
8.1.4  Set Enabled TLS Versions

Test Case ID: ENABLEDTLSVERSIONSCONFIGURATION-2

Feature Under Test: Set Enabled TLS Versions
(EnabledTLSVersionsConfiguration_SetEnabledTLSVersions)

Profile A Normative Reference: None
Profile C Normative Reference: None
Profile G Normative Reference: None
Profile Q Normative Reference: None
Profile S Normative Reference: None

Test Purpose: To verify that Client is able to setup enabled TLS versions on Device using SetEnabledTLSVersions operation.

Pre-Requisite:

- The Network Trace Capture files contains at least one Conversation between Client and Device with SetEnabledTLSVersions operation present.
- Device supports Enabled TLS Versions (Security Configuration Service).

Test Procedure (expected to be reflected in network trace file):

1. Client invokes GetServices request message with IncludeCapability = true or GetServiceCapabilities request message for the Security Configration Service request message to get supported TLS versions from a Device.
2. Device responds with code HTTP 200 OK and `GetServicesResponse` message or `GetServiceCapabilitiesResponse` message with Security Configuration Service capabilities.

3. Client invokes `SetEnabledTLSVersions` request message with non empty list to configure enabled TLS versions on a Device.

**Test Result:**

**PASS -**

- Client `SetEnabledTLSVersions` request messages are valid according to XML Schemas listed in `Namespaces` AND

- Client `SetEnabledTLSVersions` request in Test Procedure fulfills the following requirements:
  - [S1] `soapenv:Body` element has child element `tas:SetEnabledTLSVersions` AND
  - [S2] `tas:Versions` element contains at least one TLS version AND

- Device response on the `SetEnabledTLSVersions` request fulfills the following requirements:
  - [S3] It has HTTP 200 response code AND

- There is a Client `GetServices` request or `GetServiceCapabilities` request in Test Procedure that fulfills the following requirements:
  - [S5] It invoked before `SetEnabledTLSVersions` request AND
    - If `GetServices` was detected:
      - [S6] `soapenv:Body` element has child element `tds:GetServices` AND
      - [S7] `tds:IncludeCapability` element is equal to true AND
    - If `GetServiceCapabilities` was detected:
      - [S8] `soapenv:Body` element has child element `tas:GetServiceCapabilities` AND

- If `GetServices` was detected Device response on the `GetServices` request fulfills the following requirements:
  - [S9] It has HTTP 200 response code AND

- If `GetServiceCapabilities` was detected Device response on the `GetServiceCapabilities` request fulfills the following requirements:
  - [S11] It has HTTP 200 response code AND

**FAIL -**

- The Client failed PASS criteria.
Annex A Test for Appendix A

A.1 Required Number of Devices Summary

Required number of devices and Device feature dependency used in this test specification are listed in the Table.

Table A.1. Required Number of Devices Summary
