# **REVISION HISTORY**

| Vers. | Date         | Description  |
|-------|--------------|--|
| 0.6   | Feb 26, 2013 | Initial version  |
| 0.7   | Apr 16, 2013 | Adapted document to Advanced Security Service Specification v1.0_RC1 |
| 0.7.1 | May 8, 2013  | Added key store tests  |
| 0.8   | May 11, 2013 | First draft for WG review  |
| 0.81  | Jun 11, 2013 | Minor changes after Singapore F2F                                    |
| 0.82  | Jun 13, 2013 | Partial fix for ticket #1079   |
| 0.9   | Jun 14, 2013 | Added appendices A.8 to A.11 and modified Sect. 5.3.14.              |
| 13.06 | Dec, 2013    | First issue of Advanced Security Test Specification                  |
| 14.06 | Jun, 2014    | New tests were added:  |
|       |              | Create PKCS#10 – negative test,                                      |
|       |              | Delete Certificate – CA – Preserve Public Key,                       |
|       |              | Upload certificate – delete linked key (negative test),              |
|       |              | Upload certificate – Upload malformed certificate (negative test),   |
|       |              | Upload certificate – Upload expired certificate,                     |
|       |              | TLS Server Certificate - self-signed,                                |
|       |              | TLS Server Certificate – CA.   |
|       |              | Annex A.21, A.22 were added.   |
| 14.12 | Dec, 2014    | The following test cases were added:                                 |
|       |              | Create PKCS#10 – Subject Test,                                       |
|       |              | Create self-signed certificate – Subject Test,                       |
|       |              | Upload Passphrase, Delete Passphrase,                                |
|       |              | Upload PKCS8 – no key pair exists,                                   |
|       |              | Upload PKCS8 – decryption fails,                                     |
|       |              | Upload PKCS8 – key pair without private key exists,                  |
|       |              | Upload PKCS12 – no key pair exists,                                  |
|       |              | Upload PKCS12 – decryption fails,                                    |
|       |              | Upload PKCS12 – key pair without private key exists.                 |
|       |              | The following test cases were modified with ID change:               |
|       |              |  |
|       |              | Basic TLS Handshake,   |
|       |              | Basic TLS Handshake after Replace Server Certificate Assignment      |

|       |           | The following annexes were added:  |
|-------|-----------|--|
|       |           | A.23, A.24, A.25, A.26, A.27, A.28, A.29, A.30, A.31, A.32, A.33, A.34, A.35.  |
| 15.06 | Jun, 2015 | The following test cases were added:   |
|       |           | ADVANCED_SECURITY-3-2-5 Basic TLS Handshake with Replace Server Certification Path and PKCS#12                         |
|       |           | ADVANCED_SECURITY-6-3-4 Upload PKCS12 - verify key and certificate   |
|       |           | ADVANCED_SECURITY-2-1-27 CreateSelfSignedCertificate with PKCS#12  |
|       |           | ADVANCED_SECURITY-2-1-28 Create PKCS#10 request with PKCS#12   |
|       |           | ADVANCED_SECURITY-8-1-1 Upload CRL   |
|       |           | ADVANCED_SECURITY-8-1-2 Delete CRL   |
|       |           | ADVANCED_SECURITY-8-1-3 Get CRL  |
|       |           | ADVANCED_SECURITY-8-1-4 Create certification path validation policy  |
|       |           | ADVANCED_SECURITY-8-1-5 Get certification path validation policy   |
|       |           | ADVANCED_SECURITY-8-1-6 Delete certification path validation policy  |
|       |           | ADVANCED_SECURITY-3-3-1 TLS client authentication – self-<br>signed TLS server certificate with on-device RSA key pair |
|       |           | ADVANCED_SECURITY-3-3-2 CRL processing with on-device RSA key pair   |
|       |           | ADVANCED_SECURITY-3-3-3 Replace certification path validation policy assignment  |
|       |           | The following test cases were modified:  |
|       |           | ADVANCED_SECURITY-1-1-3 Check private Key status for an RSA private key  |
|       |           | ADVANCED_SECURITY-2-1-1 Create PKCS#10 certification requests  |
|       |           | ADVANCED_SECURITY-2-1-2 Create self-signed certificate   |
|       |           | ADVANCED_SECURITY-2-1-3 Upload certificate – Keystore contains private key   |
|       |           | ADVANCED_SECURITY-2-1-6 Get certificate – self-signed  |
|       |           | ADVANCED_SECURITY-2-1-8 Get all certificates – self signed   |
|       |           | ADVANCED_SECURITY-2-1-10 Delete Certificate – self signed  |
|       |           | ADVANCED_SECURITY-2-1-12 Create Certification Path – self-signed   |

|  | ADVANCED                  | _SECURITY             | -2-1-13 C | Create Certif  | ication Pat   | h – CA        |
|--|---------------------------|-----------------------|-----------|----------------|---------------|---------------|
|  | ADVANCED_                 | _SECURITY             | -2-1-14 C | Get Certificat | ion Path –    | self-signed   |
|  | ADVANCED                  | _SECURITY             | -2-1-15 0 | Get Certificat | tion Path –   | CA            |
|  | ADVANCED_<br>signed       | _SECURITY             | -2-1-16 ( | Get All Certi  | ification Pa  | aths – self-  |
|  | ADVANCED                  | _SECURITY             | -2-1-17 0 | Get All Certif | ication Pat   | hs – CA       |
|  | ADVANCED_<br>signed       | _SECURITY             | -2-1-18   | Delete Cert    | ification P   | ath – self-   |
|  | ADVANCED_                 | _SECURITY             | -2-1-19 C | elete Certifi  | cation Pat    | h - CA        |
|  | ADVANCED_                 | _SECURITY             | -2-1-20 C | Create PKCS    | 6#10 (nega    | ative test)   |
|  | ADVANCED<br>key (negativ  | _SECURITY<br>re test) | -2-1-22 เ | Jpload certi   | ficate – de   | elete linked  |
|  | ADVANCED<br>self-signed   | _SECURITY             | -3-1-1 Ad | ld Server Ce   | ertificate As | signment –    |
|  | ADVANCED_<br>CA           | _SECURITY             | -3-1-2 Ad | ld Server Ce   | ertificate As | signment –    |
|  | ADVANCED<br>Assignment    |                       |           | Replace        | Server        | Certificate   |
|  | ADVANCED<br>Assignment    |                       | -3-1-4    | Replace        | Server        | Certificate   |
|  | ADVANCED<br>self-signed   | _SECURITY             | -3-1-5 Ge | et Assigned    | Server Ce     | ertificates – |

|-------|--------------|---|
| 16.06 | Mar 2016     | The ADVANCED_SECURITY-3-2-4 has been updated.   |
| 17.06 | Jun 22, 2017 | The document formating were updated.  |
| 18.06 | Mar 14, 2018 | timeout1 variable was replaced by operationDelay variable.  |
| 18.06 | Mar 15, 2018 | The following were updated according to #1562:  |
|       |              | Annex A.47 Remove Server Certificate Assignment (added)   |
|       |              | Annex A.48 Restore Server Certificate Assignment (added)  |
|       |              | ADVANCED_SECURITY-3-1-1 Add Server Certificate Assignment – self-signed (steps 3 and 8 were added)  |
|       |              | ADVANCED_SECURITY-3-1-2 Add Server Certificate Assignment – CA (steps 3 and 8 were added)   |
|       |              | ADVANCED_SECURITY-3-1-3 Replace Server Certificate Assignment – self-signed (steps 3 and 18 were added)   |
|       |              | ADVANCED_SECURITY-3-1-4 Replace Server Certificate<br>Assignment – CA (steps 3 and 25 were added)   |
|       |              | ADVANCED_SECURITY-3-1-5 Get Assigned Server Certificates – self-signed (steps 3 and 12 were added)  |
|       |              | ADVANCED_SECURITY-3-1-6 Get Assigned Server Certificates – CA (steps 3 and 14 were added)   |
|       |              | ADVANCED_SECURITY-3-1-7 Remove Server Certificate Assignment – self-signed (steps 3 and 17 were added)  |
|       |              | ADVANCED_SECURITY-3-1-8 Remove Server Certificate<br>Assignment – CA (steps 3 and 18 were added)  |
|       |              | ADVANCED_SECURITY-3-2-3 Basic TLS Handshake (steps 3 and 23 were added)   |
|       |              | ADVANCED_SECURITY-3-2-4 Basic TLS Handshake after Replace Server Certificate Assignment (steps 3 and 39 were added)                                   |
|       |              | ADVANCED_SECURITY-3-2-5 Basic TLS Handshake with Replace<br>Server Certification Path and PKCS#12 (steps 3 and 40 were<br>added)                      |
|       |              | ADVANCED_SECURITY-3-3-1 TLS client authentication – self-<br>signed TLS server certificate with on-device RSA key pair (steps 3<br>and 38 were added) |
|       |              | ADVANCED_SECURITY-3-3-2 CRL processing with on-device RSA key pair (steps 3 and 40 were added)  |
|       |              | ADVANCED_SECURITY-4-1-1 TLS Server Certificate - self-signed (steps 3 and 22 were added)  |
|       |              | ADVANCED_SECURITY-4-1-2 TLS Server Certificate – CA (steps 3 and 35 were added)   |
| 18.06 | Mar 15, 2018 | The following were updated according to #1586:  |
|       |              | ADVANCED_SECURITY-1-1-1 Create RSA Key Pair, status through polling (steps 4.3, 4.3.1, 4.4 were updated)  |

|       |              | ADVANCED_SECURITY-1-1-2 Create RSA Key Pair, status through event (steps 6.3, 6.4 were updated)   |
|-------|--------------|---|
|       |              | Annex A.7 Create an RSA key pair (steps 4, 4.1, 5 were updated)   |
| 18.06 | Apr 17, 2018 | The following were updated according to #1615:  |
|       |              | Annex A.4 Provide CA certificate (step 1 added, step 3 updated)   |
|       |              | Annex A.22 Provide expired CA certificate (step 1 added, step 4 updated)  |
| 18.06 | Apr 23, 2018 | The following were updated according to #1594:  |
|       |              | ADVANCED_SECURITY-5-1-1 Advanced Security Service<br>Capabilities (step 13.1 were updated)  |
| 18.06 | May 03, 2018 | The following were updated according to #1593:  |
|       |              | ADVANCED_SECURITY-3-1-1 Add Server Certificate Assignment – self-signed (step 7 was added)  |
|       |              | ADVANCED_SECURITY-3-1-2 Add Server Certificate Assignment – CA (step 7 was added)   |
|       |              | ADVANCED_SECURITY-3-1-3 Replace Server Certificate Assignment – self-signed (steps 7, 14 were added)  |
|       |              | ADVANCED_SECURITY-3-1-4 Replace Server Certificate<br>Assignment – CA (steps 11, 21 were added)   |
|       |              | ADVANCED_SECURITY-3-1-6 Get Assigned Server Certificates – CA (step 9 was added)  |
|       |              | ADVANCED_SECURITY-3-1-7 Remove Server Certificate<br>Assignment – self-signed (step 13 was added)   |
|       |              | ADVANCED_SECURITY-3-1-8 Remove Server Certificate<br>Assignment – CA (steps 9, 16 were added)   |
|       |              | ADVANCED_SECURITY-3-2-3 Basic TLS Handshake (step 12 was added)   |
|       |              | ADVANCED_SECURITY-3-2-4 Basic TLS Handshake after Replace Server Certificate Assignment (steps 12, 25 were added)                               |
|       |              | ADVANCED_SECURITY-3-2-5 Basic TLS Handshake with Replace<br>Server Certification Path and PKCS#12 (steps 13, 27, 37 were<br>added)              |
|       |              | ADVANCED_SECURITY-4-1-1 TLS Server Certificate - self-signed (step 13 was added)  |
|       |              | ADVANCED_SECURITY-4-1-2 TLS Server Certificate – CA (steps 7, 20 were added)  |
|       |              | Annex A.12 Remove server certificate assignment with corresponding certification path, certificate and RSA key pair (step 3 was added)          |
|       |              | Annex A.13 Add server certificate assignment with corresponding certification path, self-signed certificate and RSA key pair (step 4 was added) |

|       |              | Annex A.20 Remove server certificate assignment with corresponding certification path, certificates and RSA key pairs (step 3 was added)   |
|-------|--------------|--|
|       |              | Annex A.47 Remove Server Certificate Assignment (step 8.4 was added)   |
|       |              | Annex A.48 Restore Server Certificate Assignment (step 1.3 was added)  |
| 18.06 | May 07, 2018 | The following were updated according to #1632:   |
|       |              | ADVANCED_SECURITY-2-1-20 CreatePKCS10CSR – negative test (step 11 was updated)   |
| 18.06 | May 16, 2018 | The following were updated according to #1619:   |
|       |              | Annex A.45 Provide CRL for specified certificate (step 1 was changed)  |
| 18.06 | Jun 21, 2018 | Reformatting document using new template   |
| 18.12 | Oct 1, 2018  | The following were updated in the scope of #1599:  |
|       |              | ADVANCED_SECURITY-2-1-27 CreateSelfSignedCertificate with PKCS#12 (Pre-Requisite updated with new item)  |
|       |              | ADVANCED_SECURITY-2-1-28 Create PKCS#10 request with PKCS#12 (Pre-Requisite updated with new item)   |
|       |              | ADVANCED_SECURITY-3-1-3 Replace Server Certificate<br>Assignment - Self-Signed (test procedure updates to create new<br>RSA key pair for second certificate)   |
|       |              | ADVANCED_SECURITY-3-1-4 Replace Server Certificate<br>Assignment - CA (test procedure updates to create new RSA key<br>pair for second CA-signed certificate)  |
|       |              | ADVANCED_SECURITY-3-2-4 Basic TLS Handshake after Replace<br>Server Certificate Assignment (test procedure updates to create new<br>RSA key pair for second certificate)   |
| 18.12 | Nov 12, 2018 | The following were updated in the scope of #1653:  |
|       |              | Title was updated (Advanced Security Test Specification replaced with Security Configuration Device Test Specification)  |
|       |              | Introduction section was updated (ONVIF Advanced Security Test<br>Specification was replaces with ONVIF Security Configuration<br>Device Test Specification)   |
|       |              | Scope section was updated (ONVIF Advanced Security Test<br>Specification was replaces with ONVIF Security Configuration<br>Device Test Specification, ONVIF Advanced Security Service<br>replaced with ONVIF Security Configuration Service) |
|       |              | Normative references was updated ([ONVIF Advanced Security<br>Service] ONVIF Advanced Security Specifications: replaced<br>with [ONVIF Security Configuration Service] ONVIF Security<br>Configuration Specifications:)                      |
|       |              | Definition was updated (ONVIF Advanced Security Service replaced with ONVIF Security Configuration Service)  |
|       |              |  |

| Test Overview\Test Policy\Keystore was updated (Advanced Security Service was replaced with ONVIF Security Configuration Service)  |
|--|
| Test Overview\Test Policy\Certificate Management was updated (Advanced Security Service was replaced with ONVIF Security Configuration Service)  |
| Test Overview\Test Policy\TLS Server was updated (Advanced Security Service was replaced with ONVIF Security Configuration Service)  |
| Test Overview\Test Policy\Referential Integrity was updated<br>(Advanced Security Service was replaced with ONVIF Security<br>Configuration Service)   |
| Test Overview\Test Policy\Capabilities was updated (Advanced Security Service was replaced with ONVIF Security Configuration Service)  |
| Test Overview\Test Policy\Off-Device Key Generation Operations<br>was updated (Advanced Security Service was replaced with ONVIF<br>Security Configuration Service)  |
| Test Overview\Test Policy\Certificate-based Client Authentication was updated (Advanced Security Service was replaced with ONVIF Security Configuration Service)   |
| Advanced Security Test Cases chapter title was updated with Security Configuration Test Cases  |
| For all test cases Pre-Requisites were updated ("Advanced Security<br>Service is received from the DUT." was replaced with "Security<br>Configuration Service is received from the DUT.")                                |
| For all test cases WSDL References were updated ("advancedsecurity.wsdl" was replaced with "security.wsdl")  |
| For all test cases Specification Coverage were updated ("Advanced Security, Keystore – Key Management" was replaced with "Key Management (ONVIF Security Configuration Service Specification)")                          |
| For all test cases Specification Coverage were updated ("Advanced<br>Security, Key Management" was replaced with "Key Management<br>(ONVIF Security Configuration Service Specification)")                               |
| For all test cases Specification Coverage were updated ("Advanced<br>Security, Keystore - Certificate Management" was replaced with<br>"Certificate Management (ONVIF Security Configuration Service<br>Specification)") |
| For all test cases Specification Coverage were updated ("Advanced<br>Security, Certificate Management" was replaced with "Certificate<br>Management (ONVIF Security Configuration Service Specification)")               |
| For all test cases Specification Coverage were updated ("Advanced<br>Security, TLS Server" was replaced with "TLS Server (ONVIF<br>Security Configuration Service Specification)")                                       |
| For all test cases Specification Coverage were updated ("Advanced Security, Capabilities" was replaced with "Capabilities (ONVIF Security Configuration Service Specification)")   |

| For all test cases Specification Coverage were updated ("Advanced<br>Security, Passphrase Management" was replaced with "Passphrase<br>Management (ONVIF Security Configuration Service Specification)")  |
|---|
| For all test cases Specification Coverage were updated ("Advanced<br>Security, Upload Certificate Revocation List" was replaced with "CRL<br>Management (ONVIF Security Configuration Service Specification)")  |
| For all test cases Specification Coverage were updated ("Advanced<br>Security, Delete Certificate Revocation List" was replaced with "CRL<br>Management (ONVIF Security Configuration Service Specification)")  |
| For all test cases Specification Coverage were updated ("Advanced Security, 7.6.2 Get Certificate Revocation List" was replaced with "CRL Management (ONVIF Security Configuration Service Specification)")   |
| For all test cases Specification Coverage were updated ("Advanced<br>Security, Create Certification Path Validation Policy" was replaced<br>with "Certification Path Validation Policy Management (ONVIF<br>Security Configuration Service Specification)")   |
| For all test cases Specification Coverage were updated ("Advanced<br>Security, Get Certification Path Validation Policy" was replaced with<br>"Certification Path Validation Policy Management (ONVIF Security<br>Configuration Service Specification)")      |
| For all test cases Specification Coverage were updated ("Advanced<br>Security, Delete Certification Path Validation Policy" was replaced<br>with "Certification Path Validation Policy Management (ONVIF<br>Security Configuration Service Specification)")   |
| For all test cases Specification Coverage were updated ("Advanced<br>Security, Replace Certification Path Validation Policy" was replaced<br>with "Certification Path Validation Policy Management (ONVIF<br>Security Configuration Service Specification)")  |
| Test ADVANCED_SECURITY-5-1-1 was renamed ("Advanced<br>Security Service Capabilities" was replaced with "Security<br>Configuration Service Capabilities")   |
| For test ADVANCED_SECURITY-5-1-1 test purpose was updated<br>("To verify DUT Advanced Security Service Capabilities." was<br>replaced with "To verify DUT Security Configuration Service<br>Capabilities.")   |
| Test ADVANCED_SECURITY-5-1-2 was renamed ("Get Services<br>and Get Advanced Security Service Capabilities Consistency" was<br>replaced with "Get Services and Get Security Configuration Service<br>Capabilities Consistency")                                |
| For test ADVANCED_SECURITY-5-1-2 test purpose was updated<br>("To verify Get Services and Advanced Security Service Capabilities<br>consistency." was replaced with "To verify Get Services and Security<br>Configuration Service Capabilities consistency.") |
| Feature under test field for tests ADVANCED_SECURITY-5-1-1<br>and ADVANCED_SECURITY-5-1-2 were updated<br>("GetServiceCapabilities (for Advanced Security Service)" was<br>replaced with "GetServiceCapabilities (for Security Configuration<br>Service)")    |
| Other minor changes in description related to renaming of Advanced Security Service to Security Configuration Service.  |

| 18.12 | Dec 21, 2018 | Switching Hub description in 'Network Configuration for DUT' section was updated according to #1737                         |
|-------|--------------|---|
| 19.06 | May 06, 2019 | The following were updated in the scope of #1799:   |
|       |              | Security Configuration Test Cases\TLS Versions (added)  |
|       |              | ADVANCED_SECURITY-9-1-1 TLS Version Management (added)  |
|       |              | ADVANCED_SECURITY-9-1-2 Disable TLS Version (added)   |
|       |              | Annex A.49 Configuring HTTPS if Required (added)  |
|       |              | Annex A.50 Configuring HTTPS using Security Configuration Service (added)   |
|       |              | Annex A.51 Add server certificate assignment with corresponding certification path, CA certificate and RSA key pair (added) |
|       |              | Annex A.52 Basic TLS Handshake With Protocol Version Alert (added)  |
|       |              | Scope\TLS Versions (added)  |
|       |              | Test Policy\TLS Versions (added)  |
| 20.06 | May 13, 2020 | Pre-Requisite of the following test cases updated with adding of Pull-<br>Point Notification feature according to #1999:    |
|       |              | ADVANCED_SECURITY-1-1-2 Create RSA Key Pair, status through event   |
| 20.12 | Dec 08, 2020 | Pre-Requisites of the following test cases were updated with adding of Network Configuration feature according to #2094     |
|       |              | ADVANCED_SECURITY-3-1-1 Add Server Certificate Assignment – self-signed   |
|       |              | ADVANCED_SECURITY-3-1-2 Add Server Certificate Assignment – CA  |
|       |              | ADVANCED_SECURITY-3-1-3 Replace Server Certificate<br>Assignment – self-signed  |
|       |              | ADVANCED_SECURITY-3-1-4 Replace Server Certificate<br>Assignment – CA   |
|       |              | ADVANCED_SECURITY-3-1-5 Get Assigned Server Certificates – self-signed  |
|       |              | ADVANCED_SECURITY-3-1-6 Get Assigned Server Certificates – CA   |
|       |              | ADVANCED_SECURITY-3-1-7 Remove Server Certificate<br>Assignment – self-signed   |
|       |              | ADVANCED_SECURITY-3-1-8 Remove Server Certificate<br>Assignment – CA  |
|       |              | ADVANCED_SECURITY-3-2-3 Basic TLS Handshake   |
|       |              | ADVANCED_SECURITY-3-2-4 Basic TLS Handshake after Replace Server Certificate Assignment                                     |

| ADVANCED_SECURITY-3-2-5 Basic TLS Handshake with Replace<br>Server Certification Path and PKCS#12                      |
|--|
| ADVANCED_SECURITY-3-3-1 TLS client authentication – self-<br>signed TLS server certificate with on-device RSA key pair |
| ADVANCED_SECURITY-3-3-2 CRL processing with on-device RSA key pair   |
| ADVANCED_SECURITY-4-1-1 TLS Server Certificate - self-signed   |
| ADVANCED_SECURITY-4-1-2 TLS Server Certificate – CA  |
| ADVANCED_SECURITY-9-1-2 Disable TLS Version  |

### **Table of Contents**

| 1 | 1 Introduction          |   |  |  |  |  |
|---|-------------------------|---|--|--|--|--|
|   | 1.1                     | Scop  | e  | 19   |  |  |

| 5.1 | Keys   | Keystore   |    |  |
|-----|--------|--|----|--|
|     | 5.1.1  | Create RSA Key Pair, status through polling                        | 34 |  |
|     | 5.1.2  | Create RSA Key Pair, status through event                          | 35 |  |
|     | 5.1.3  | Check private Key status for an RSA private key                    | 38 |  |
|     | 5.1.4  | Get all keys   | 39 |  |
|     | 5.1.5  | Delete Key   | 40 |  |
| 5.2 | Certif | ficate Management  | 42 |  |
|     | 5.2.1  | Create PKCS#10 certification requests                              | 42 |  |
|     | 5.2.2  | Create self-signed certificate                                     | 43 |  |
|     | 5.2.3  | Upload certificate – Keystore contains private key                 | 44 |  |
|     | 5.2.4  | Upload certificate – Keystore contains private key (negative test) | 46 |  |
|     | 5.2.5  | Upload certificate – Keystore does not contain private key         | 47 |  |
|     | 5.2.6  | Get certificate – self-signed                                      | 48 |  |
|     | 5.2.7  | Get certificate – CA   | 50 |  |
|     | 5.2.8  | Get all certificates – self signed                                 | 51 |  |
|     | 5.2.9  | Get All Certificate – CA   | 52 |  |
|     | 5.2.10 | Delete Certificate – self signed                                   | 54 |  |
|     | 5.2.11 | Delete Certificate – CA  | 55 |  |
|     | 5.2.12 | Create Certification Path – self-signed                            | 57 |  |
|     | 5.2.13 | Create Certification Path – CA                                     | 58 |  |
|     | 5.2.14 | Get Certification Path – self-signed                               | 60 |  |
|     | 5.2.15 | Get Certification Path – CA  | 61 |  |
|     | 5.2.16 | Get All Certification Paths – self-signed                          | 62 |  |
|     | 5.2.17 | Get All Certification Paths – CA                                   | 64 |  |
|     | 5.2.18 | Delete Certification Path – self-signed                            | 65 |  |
|     | 5.2.19 | Delete Certification Path - CA                                     | 67 |  |
|     | 5.2.20 | CreatePKCS10CSR – negative test                                    | 69 |  |
|     | 5.2.21 | DeleteCertificate – CA – Preserve Public Key                       | 71 |  |
|     | 5.2.22 | Upload certificate – delete linked key (negative test)             | 72 |  |
|     | 5.2.23 | Upload certificate – Upload malformed certificate (negative test)  | 74 |  |
|     | 5.2.24 | Upload certificate – Upload expired certificate                    | 75 |  |

|     | 5.2.2  | 25      | Crea   | teSelfSignedCertificate with PKCS#12                                | 76   |  |
|-----|--|---------|--------|---|------|--|
|     | 5.2.2  | 26      | Crea   | te PKCS#10 request with PKCS#12                                     | 79   |  |
| 5.3 | TLS Server                                       |         |        |   |      |  |

# **1** Introduction

The goal of the ONVIF test specification set is to make it possible to realize fully interoperable IP physical security implementation from different vendors. The set of ONVIF test specification describes the test cases need to verify the [ONVIF Core Specs] and [ONVIF Conformance] requirements. In addition, the test cases are to be basic inputs for some Profile specification requirements. It also describes the test framework, test setup, pre-requisites, test policies needed for the execution of the described test cases.

This ONVIF Security Configuration Device Test Specification acts as a supplementary document to the [ONVIF Network Interface Specs], illustrating test cases need to be executed and passed. In addition, this specification acts as an input document to the development of test tool that will be used to test the ONVIF device implementation conformance towards ONVIF standard. This test tool is referred as ONVIF Client hereafter.

## 1.1 Scope

This ONVIF Security Configuration Device Test Specification defines and regulates the conformance testing procedure for the ONVIF conformant devices. Conformance testing is meant to be functional black-box testing. The objective of this specification is to provide test cases to test individual requirements of ONVIF devices according to the ONVIF Security Configuration Service, which is defined in [ONVIF Security Configuration Service].

The principal intended purposes are:

- Provide self-assessment tool for implementations.
- Provide comprehensive test suite coverage for [ONVIF Network Interface Specs].

This specification does not address the following:

- Product use cases and non-functional (performance and regression) testing.
- SOAP Implementation Interoperability test i.e. Web Service Interoperability Basic Profile version 2.0 (WS-I BP 2.0).
- Full coverage of network protocol implementation test for HTTP, HTTPS, RTP, RTSP, and TLS protocols.

The set of ONVIF Test Specification will not cover the complete set of requirements as defined in [ONVIF Network Interface Specs]; instead, it will cover its subset.

This ONVIF Security Configuration Device Test Specification covers the ONVIF Security Configuration Service, which is a functional block of [ONVIF Network Interface Specs]. The following section gives a brief overview of each functional block and its scope.

# 1.1.1 Keystore

The Keystore section covers the test cases needed for storage and management of keys on an ONVIF device.

The scope of this specification section is to cover the following functions:

- Create RSA Key Pair
- · Get Key Status
- Get Private Key Status
- Get All Keys
- Delete Key

# 1.1.2 Certificate Management

The Certificate Management section covers the test cases needed for storage and management of certificates on an ONVIF device.

The scope of this specification section is to cover the following functions:

- Create PKCS#10 Certification Request
- · Create Self-Signed Certificate
- Upload Certificate
- · Get Certificate
- · Get All Certificates
- · Delete Certificate
- · Create Certification Path
- Get Certification Path
- Get All Certification Paths
- · Delete Certification Path

# 1.1.3 TLS Server

The TLS Server section covers the test cases needed for configuring the TLS server on an ONVIF device.

#### The scope of this specification section is to cover the following functions:

- Add Server Certificate Assignment
- Remove Server Certificate Assignment
- Replace Server Certificate Assignment
- · Get Assigned Server Certificates
- Basic TLS Handshake
- · TLS client authentication
- · Add certification path validation policies assignment
- Delete certification path validation policies assignment
- · Replace certification path validation policy assignment
- · Get certification path validation policies assignment

# 1.1.4 Referential integrity

The Referential integrity section covers the test cases needed for referential integrity checks on an ONVIF device.

## 1.1.5 Capabilities

The Capabilities section covers the test cases needed for getting capabilities from an ONVIF device.

The scope of this specification section is to cover the following functions:

- · Getting capabilities with GetServiceCapabilities command
- · Getting capabilities with GetServices command

### 1.1.6 Off-Device Key Generation Operations

The Off-Device Key Generation Operations section covers the test cases needed for uploading keys to an ONVIF device, potentially along with a certificate for the key, based on the PKCS#8 [RFC 5958] and PKCS#12 [PKCS#12] data structures.

The scope of this specification section is to cover the following functions:

• Upload Passphrase

- Delete Passphrase
- · Upload key pair in PKCS#8 data structure
- · Upload certificate with private key in PKCS#12 data structure

# 1.1.7 Certificate-based Client Authentication

The Certificate-based Client Authentication section covers the test cases needed for CRL management on an ONVIF device.

The scope of this specification section is to cover the following functions:

- Upload CRL
- · Get All CRLs
- · Delete CRL
- · Create certification path validation policy
- · Get certification path validation policies
- · Delete certification path validation policy
- · Get certification path validation policy

### 1.1.8 TLS Versions

The TLS Versions section covers the test cases needed for disabling and enabling TLS versions on an ONVIF device.

The scope of this specification section is to cover the following functions:

- · Get list of Enabled TLS Versions
- Set list of Enabled TLS Versions

The key words "shall", "shall not", "should", "should not", "may", "need not", "can", "cannot" in this specification are to be interpreted as described in [ISO/IEC Directives Part 2].

# 3.2 Definitions

This section defines terms that are specific to the ONVIF Security Configuration Service and tests. For a list of applicable general terms and definitions, please see [ONVIF Base Test].

| Кеу                     | A key is an input to a cryptographic algorithm. Sufficient<br>randomness of the key is usually a necessary condition for<br>the security of the algorithm. This specification supports RSA<br>key pairs as keys.  |
|-------------------------|---|
| Key Pair                | A key that consists of a public key and (optionally) a private key.   |
| RSA key pair            | A key pair that is accepted as input by the RSA algorithm.  |
| Digital Signature       | A digital signature for an object allows to verify the object's<br>authenticity, i.e., to check whether the object has in fact been<br>created by the signer and has not been modified afterwards.<br>A digital signature is based on a key pair, where the private<br>key is used to create the signature and the public key is used<br>for verification of the signature. |
| Certificate             | A certificate as used in this specification binds a public<br>key to a subject entity. The certificate is digitally signed by<br>the certificate issuer (the certification authority) to allow for<br>verifying its authenticity.   |
| Certification Path      | A certification path is a sequence of certificates in which the signature of each certificate except for the last certificate can be verified with the subject public key in the next certificate in the sequence.  |
| Certification Authority | A certification authority is an entity that issues certificates to subject entities.  |
| Alias                   | An alias is a name for an object on the device that is chosen<br>by the client and treated transparently by the device.   |

# 3.3 Abbreviations

This section describes abbreviations used in this document.

- СА Certification Authority
- **CSR** Certificate Signing Request (also called Certification Request)
- SHA Secure Hashing Algorithm

TLS Transport Layer Security

# **4** Test Overview

This section provides information the test setup procedure and required prerequisites, and the test policies that should be followed for test case execution.

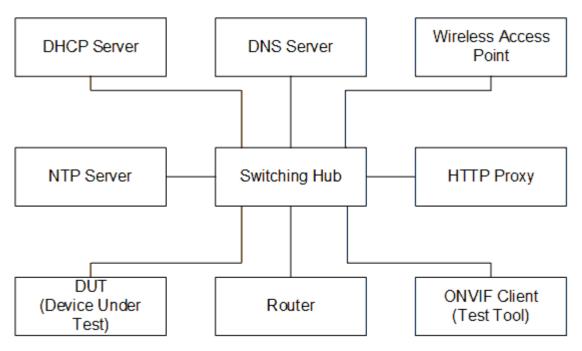

# 4.1 Test Setup

# 4.1.1 Network Configuration for DUT

The generic test configuration for the execution of test cases defined in this document is as shown below (Figure 4.1).

Based on the individual test case requirements, some of the entities in the below setup may not be needed for the execution of those corresponding test cases.

**DUT:** ONVIF device to be tested. Hereafter, this is referred to as DUT (Device Under Test).

ONVIF Client (Test Tool): Tests are executed by this system and it controls the behavior of the DUT. It handles both expected and unexpected behavior.

**HTTP Proxy:** provides facilitation in case of RTP and RTSP tunneling over HTTP.

Wireless Access Point: provides wireless connectivity to the devices that support wireless connection.

DNS Server: provides DNS related information to the connected devices.

DHCP Server: provides IPv4 Address to the connected devices.

NTP Server: provides time synchronization between ONVIF Client and DUT.

Switching Hub: provides network connectivity among all the test equipments in the test environment. All devices should be connected to the Switching Hub. When running multiple test instances in parallel on the same network, the Switching Hub should be configured to use filtering in order to avoid multicast traffic being flooded to all ports, because this may affect test stability.

Router: provides router advertisements for IPv6 configuration.

### 4.2 Prerequisites

The pre-requisites for executing the test cases described in this Test Specification are:

- The DUT shall be configured with an IPv4 address.
- The DUT shall be IP reachable in the test configuration.
- The DUT shall be able to be discovered by the Test Tool.
- The DUT shall be configured with the time, i.e. manual configuration of UTC time and if NTP is supported by the DUT then NTP time shall be synchronized with NTP Server.
- The DUT time and Test tool time shall be synchronized with each other either manually or by a common NTP server.
- The ONVIF Client supports both WS-Security Username Token profile and HTTP digest authentication as authentication functionalities and selects the authentication method to use based on the procedure defined in Sect. 3.3.6 (Authentication method selection as a testing framework) of [ONVIF Base Test Spec].
- The user account that is used by the ONVIF Client for issuing commands to the DUT has administrative rights.
- The ONVIF Client shall have access to a certification authority.
- The DUT shall have enough free storage capacity for RSA key pairs that is required for test cases (see test cases pre-requisites for more information).
- The DUT shall have enough free storage capacity for certificates that is required for test cases (see test cases pre-requisites for more information).
- The DUT shall have enough free storage capacity for certification paths that is required for test cases (see test cases pre-requisites for more information).

• The DUT shall have enough free storage capacity for server certificate assignment that is required for test cases (see test cases pre-requisites for more information).

# 4.3 Test Policy

This section describes the test policies specific to the test case execution of each functional block.

The DUT shall adhere to the test policies defined in this section.

# 4.3.1 General Policy

The test policies specific to the test case execution of all functional blocks:

- If a DUT method produces a fault that is not explicitly stated as expected in the test procedure of a test case, the result of the test case shall be FAIL.
- Assertions in a test procedure are defined using the verb verify, e.g., "ONVIF Client verifies that list I contains ID x", with the following semantics:
  - If the assertion holds, the test proceeds with the next step in the test procedure.
  - If the assertion does not hold, the test result shall be FAIL.

# 4.3.2 Keystore

The test policies specific to the test case execution of Keystore functional block:

- DUT shall give the ONVIF Security Configuration Service entry point by GetServices command, if DUT supports this service. Otherwise, these test cases will be skipped.
- The DUT shall support on-board generation of an RSA key pair.
- · The following tests are performed about key management
  - The DUT generates an RSA key pair status handling is done with polling.
  - The DUT generates an RSA key pair status handling is done with event.
  - The DUT returns whether a key pair in the keystore contains a private key.
  - The status of a key in the DUT's keystore is returned correctly.
  - A key is deleted correctly from the keystore on the DUT.

Please, refer to Section 5.1 for Keystore Test Cases.

# 4.3.3 Certificate Management

The test policies specific to the test case execution of Certificate Management functional block:

- DUT shall give the ONVIF Security Configuration Service entry point by GetServices command, if DUT supports this service. Otherwise, these test cases will be skipped.
- The DUT shall support generating a PKCS#10 certification request.
- The DUT shall support creating a self-signed certificate.
- · The following tests are performed about certificate management
  - The DUT correctly supports external certification for a key pair in the keystore.
  - The DUT correctly generates a self-signed certificate for a key pair in the keystore.
  - The ONVIF Client can upload a certificate to the DUT.
  - A certificate from the keystore on the DUT is correctly returned to the ONVIF client.
  - All certificates in the keystore on the DUT are correctly returned to the ONVIF client.
  - The ONVIF Client can delete a certificate from the keystore on the DUT.
  - Certificates in the keystore on the DUT can be correctly combined to a certification path.
  - A certification path stored in the keystore on the DUT can be correctly deleted.

Please, refer to Section 5.2 for Certificate Management Test Cases.

# 4.3.4 TLS Server

The test policies specific to the test case execution of TLS Server functional block:

- DUT shall give the ONVIF Security Configuration Service entry point by GetServices command, if DUT supports this service. Otherwise, these test cases will be skipped.
- The DUT shall implement a TLS server.
- The following tests are performed for the TLS server
  - A certification path is assigned to the TLS server.
  - A certification path is received from the TLS server.
  - A certification path assignment is removed from the TLS server.

- A certification path assignment to the TLS server is replaced by another certification path assignment.
- Basic TLS Handshake
- Basic TLS Handshake after Replace Server Certificate Assignment
- The following tests are performed for the TLS server in case certificate along with an RSA private key in a PKCS#12 data structure upload is supported by the DUT
  - Basic TLS Handshake with Replace Server Certification Path and PKCS#12
- The following tests are performed for the TLS server in case TLS client authentication is supported by the DUT
  - TLS client authentication self-signed TLS server certificate with on-device RSA key pair
  - CRL processing with on-device RSA key pair
  - Replace certification path validation policy assignment

Please, refer to Section 5.3 for TLS Server Test Cases.

# 4.3.5 Referential Integrity

The test policies specific to the test case execution of Referential integrity functional block:

- DUT shall give the ONVIF Security Configuration Service entry point by GetServices command, if DUT supports this service. Otherwise, these test cases will be skipped.
- The DUT shall implement a TLS server.
- The following tests are performed for the TLS server
  - Referential integrity of certificate assigned to a TLS server.

Please, refer to Section 5.4 for Referential integrity Test Cases.

## 4.3.6 Capabilities

The test policies specific to the test case execution of Capabilities functional block:

- DUT shall give the ONVIF Security Configuration Service entry point by GetServices command, if DUT supports this service. Otherwise, these test cases will be skipped.
- The following tests are performed

- · Getting capabilities with GetServiceCapabilities command
- · Getting capabilities with GetServices command

Please, refer to Section 5.5 for Capabilities Test Cases.

### 4.3.7 Off-Device Key Generation Operations

The test policies specific to the test case execution of Off-Device Key Generation Operations functional block:

- DUT shall give the ONVIF Security Configuration Service entry point by GetServices command, if DUT supports this service. Otherwise, these test cases will be skipped.
- · The following tests are performed
  - Uploading passphrase with UploadPassphrase command
  - · Deleting passphrase with DeletePassphrase command
  - Upload key pair in PKCS#8 data structure with UploadKeyPairInPKCS8 command
  - Upload certificate with private key in PKCS#12 data structure with UploadCertificateWithPrivateKeyInPKCS12 command

Please, refer to Section 5.6 for Off-Device Key Generation Operations Test Cases.

### 4.3.8 Certificate-Based Client Authentication

The test policies specific to the test case execution of Certificate-based Client Authentication functional block:

- DUT shall give the ONVIF Security Configuration Service entry point by GetServices command, if DUT supports this service. Otherwise, these test cases will be skipped.
- The DUT shall support upload of CRLs.
- · The following tests are performed about CRL management
  - The ONVIF Client can upload a CRL to the DUT.
  - A CRL from the storage on the DUT is correctly returned to the ONVIF client.
  - All CRLs in the storage on the DUT are correctly returned to the ONVIF client.
  - The ONVIF Client can delete a CRL from the storage on the DUT.

- The following tests are performed about certification path validation policy management
  - The ONVIF Client can create a certification path validation policy on the DUT.
  - A certification path validation policy from the storage on the DUT is correctly returned to the ONVIF client.
  - All certification path validation policies in the storage on the DUT are correctly returned to the ONVIF client.
  - The ONVIF Client can delete a certification path validation policy from the storage on the DUT.

Please, refer to Section 5.7 for Certificate-based Client Authentication Test Cases.

# 4.3.9 TLS Versions

The test policies specific to the test case execution of TLS Versions functional block:

- DUT shall give the ONVIF Security Configuration Service entry point by GetServices command, if DUT supports this service. Otherwise, these test cases will be skipped.
- The DUT shall support enabling and disabling specific TLS versions.
- The following tests are performed about enabling and disabling specific TLS versions
  - The ONVIF Client can get list of enabled TLS versions.
  - The ONVIF Client can set list of enabled TLS versions.
  - TLS versions out of enabled TLS versions are rejected by the DUT.

Please, refer to Section 5.8 for TLS Versions Test Cases.

# **5** Security Configuration Test Cases

# 5.1 Keystore

# 5.1.1 Create RSA Key Pair, status through polling

Test Case ID: ADVANCED SECURITY-1-1-1

Specification Coverage: Key Management (ONVIF Security Configuration Service Specification)

Feature under test: CreateRSAKeyPair, GetKeyStatus

WSDL Reference: security.wsdl

**Test Purpose:** To test RSA key pair generation with key status retrieval through polling.

Pre-Requisite: Security Configuration Service is received from the DUT. On-board RSA key pair generation is supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair.

Test Configuration: ONVIF Client and DUT

#### **Test Procedure:**

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client gets the service capabilities (out cap) by following the procedure mentioned in Annex A.10.
- 4. For each key length keyLength in the RSAKeyLengths capability contained in cap.KeystoreCapabilities repeat the following steps:
  - 4.1. ONVIF Client invokes CreateRSAKeyPair with parameter
    - KeyLength := keyLength
  - 4.2. The DUT responds with CreateRSAKeyPairResponse message with parameters
    - KeyID =: keyID
    - EstimatedCreationTime =: duration
  - 4.3. Until operationDelay + duration expires repeat the following steps:

- 4.3.1. ONVIF Client waits for 5 seconds.
- 4.3.2. ONVIF Client invokes GetKeyStatus with parameters
  - KeyID := keyID
- 4.3.3. The DUT responds with **GetKeyStatusResponse** message with parameters
  - KeyStatus =: keyStatus
- 4.3.4. If *keyStatus* is equal to "ok", go to the step 4.5.
- 4.3.5. If keyStatus is equal to "corrupt", FAIL the test, delete the RSA key pair (in key/D) by following the procedure mentioned in Annex A.1 to restore DUT configuration, and skip other steps.
- 4.4. If operationDelay + duration timeout expires for step 4.3 and the last keyStatus is other than "ok", FAIL the test, delete the RSA key pair (in keyID) by following the procedure mentioned in Annex A.1 to restore DUT configuration and skip other steps.
- 4.5. ONVIF Client deletes the RSA key pair (in keyID) by following the procedure mentioned in Annex A.1 to restore DUT configuration.

#### Test Result:

#### PASS -

· DUT passes all assertions.

#### FAIL -

- The DUT did not send CreateRSAKeyPairResponse message(s).
- The DUT did not send GetKeyStatusResponse message(s).

Note: operationDelay will be taken from Operation Delay field of ONVIF Device Test Tool.

### 5.1.2 Create RSA Key Pair, status through event

### Test Case ID: ADVANCED SECURITY-1-1-2

Specification Coverage: Key Management (ONVIF Security Configuration Service Specification)

Feature under test: CreateRSAKeyPair

WSDL Reference:security.wsdl and event.wsdl

**Test Purpose:** To test RSA key pair generation with key status retrieval through events.

Pre-Requisite: Security Configuration Service is received from the DUT. Event Service was received from the DUT. On-board RSA key pair generation is supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair. Device supports Pull-Point Notification feature.

#### Test Configuration: ONVIF Client and DUT

#### **Test Procedure:**

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client gets the service capabilities (out cap) by following the procedure mentioned in Annex A.10.
- 4. ONVIF Client invokes CreatePullPointSubscription with parameters
  - Filter.TopicExpression := "tns1:Advancedsecurity/Keystore/KeyStatus"
  - Filter.TopicExpression.@Dialect := "http://www.onvif.org/ver10/tev/topicExpression/ ConcreteSet"
- 5. The DUT responds with a CreatePullPointSubscriptionResponse message with parameters
  - SubscriptionReference =: s
  - CurrentTime =: *ct*
  - TerminationTime =: *tt*
- 6. For each key length keyLength in the RSAKeyLengths capability contained in cap.KeystoreCapabilities repeat the following steps:
  - 6.1. ONVIF Client invokes CreateRSAKeyPair with parameter
    - KeyLength := keyLength
  - 6.2. The DUT responds with CreateRSAKeyPairResponse message with parameters
    - KeyID =: keyID
    - EstimatedCreationTime =: duration
  - 6.3. Until operationDelay + duration timeout expires repeat the following steps:

- 6.3.1. ONVIF Client waits for time *t* := min{(*tt-ct*)/2, 1 second}.
- 6.3.2. ONVIF Client invokes **PullMessages** to the subscription endpoint *s* with parameters
  - Timeout := PT60S
  - MessageLimit := 1
- 6.3.3. The DUT responds with **PullMessagesResponse** message with parameters
  - CurrentTime =: ct
  - TerminationTime =: *tt*
  - NotificationMessage =: m
- 6.3.4. If *m* is not null and the KeylD source simple item in *m* is equal to *keylD* and the NewStatus data simple item in *m* is equal to "ok", go to the step 6.5.
- 6.3.5. If *m* is not null and the KeyID source simple item in *m* is equal to *keyID* and the NewStatus data simple item in *m* is equal to "corrupt", FAIL the test, delete the RSA key pair (in *keyID*) by following the procedure mentioned in Annex A.1 to restore DUT configuration and go to the step 7.
- 6.4. If operationDelay + duration timeout expires for step 6.3 without Notification with KeyID source simple item equal to keyID and the NewStatus data simple item equal to "ok", FAIL the test, delete the RSA key pair (in keyID) by following the procedure mentioned in Annex A.1 to restore DUT configuration and go to the step 7.
- 6.5. ONVIF Client deletes the RSA key pair (in *keyID*) by following the procedure mentioned in Annex A.1 to restore DUT configuration.
- 7. ONVIF Client sends an **Unsubscribe** to the subscription endpoint *s*.
- 8. The DUT responds with UnsubscribeResponse message.

# PASS -

The DUT passes all assertions.

# FAIL -

• The DUT did not send CreatePullPointSubscriptionResponse message.

- The DUT did not send CreateRSAKeyPairResponse message(s).
- The DUT did not send PullMessagesResponse message(s).
- The DUT did not send the UnsubscribeResponse message.

Note: operationDelay will be taken from Operation Delay field of ONVIF Device Test Tool.

# 5.1.3 Check private Key status for an RSA private key

# Test Case ID: ADVANCED SECURITY-1-1-3

Specification Coverage: Key Management (ONVIF Security Configuration Service Specification)

Feature under test: GetAllKeys

WSDL Reference: security.wsdl

**Test Purpose:** To test whether the private key status is correctly returned for a key pair with private key.

Pre-Requisite: Security Configuration Service is received from the DUT. On-board RSA key pair generation is supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair.

#### Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates an RSA key pair (out keyID) by following the procedure mentioned in Annex A.7.
- 4. ONVIF Client invokes GetAllKeys.
- 5. The DUT responds with a GetAllKeysResponse message with parameters
  - KeyAttribute list =: keyAttributeList
- 6. If *keyAttributeList*[KeyID = *keyID*].hasPrivateKey is not equal to true, FAIL the test and go to the next step.
- 7. ONVIF Client deletes the RSA key pair (in keyID) by following the procedure mentioned in Annex A.1 to restore DUT configuration.

#### PASS -

· DUT passes all assertions.

### FAIL -

• DUT did not send GetAllKeysResponse message.

# 5.1.4 Get all keys

#### Test Case ID: ADVANCED\_SECURITY-1-1-4

Specification Coverage: Key Management (ONVIF Security Configuration Service Specification)

Feature under test: GetAllKeys

WSDL Reference: security.wsdl

Test Purpose: To test listing of RSA key pairs and appearing of new created RSA key pairs in the list.

Pre-Requisite: Security Configuration Service is received from the DUT. On-board RSA key pair generation is supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client invokes GetAllKeys.
- 4. The DUT responds with a GetAllKeysResponse message with parameters
  - KeyAttribute list =: *initialKeyList*
- 5. ONVIF Client creates an RSA key pair (out keyID) by following the procedure mentioned in Annex A.7.
- 6. ONVIF Client invokes GetAllKeys.
- 7. The DUT responds with a GetAllKeysResponse message with parameters

- KeyAttribute list =: updatedKeyList
- 8. If updatedKeyList does not contain keyID and all keys from initialKeyList, FAIL the test, and go to the step 10.
- 9. If updatedCertificateList contains keys other than key/D or keys from initialCertificateList, FAIL the test, and go to the step 10.
- 10. ONVIF Client deletes the RSA key pair (in keyID) by following the procedure mentioned in Annex A.1 to restore DUT configuration.

#### PASS -

DUT passes all assertions.

### FAIL -

DUT did not send GetAllKeysResponse message(s).

Note: The DUT may return an empty list at step 4.

# 5.1.5 Delete Key

Test Case ID: ADVANCED SECURITY-1-1-5

Specification Coverage: Key Management (ONVIF Security Configuration Service Specification)

Feature under test: DeleteKey

WSDL Reference: security.wsdl

Test Purpose: To test deletion of RSA key pairs

Pre-Requisite: Security Configuration Service is received from the DUT. On-board RSA key pair generation is supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.

- ONVIF Client invokes GetAllKeys.
- 4. The DUT responds with a GetAllKeysResponse message with parameters
  - KeyAttribute list =: initialKeyList
- 5. ONVIF Client creates an RSA key pair (out keyID) by following the procedure mentioned in Annex A.7.
- ONVIF Client invokes GetAllKeys.
- 7. The DUT responds with a GetAllKeysResponse message with parameters
  - KeyAttribute list =: updatedKeyList
- 8. If updatedKeyList does not contain keyID and all keys from initialKeyList, FAIL the test, delete the RSA key pair (in keyID) by following the procedure mentioned in Annex A.1 to restore DUT configuration, and skip other steps.
- 9. If updatedKeyList contains keys other than keyID or keys from initialKeyList, FAIL the test, and delete the RSA key pair (in key/D) by following the procedure mentioned in Annex A.1 to restore DUT configuration, and skip other steps.
- 10. ONVIF Client invokes DeleteKey with parameters
  - KeyID =: keyID
- 11. The DUT responds with a **DeleteKeyResponse** message.
- 12. ONVIF Client invokes GetAllKeys.
- 13. The DUT responds with a GetAllKeysResponse message with parameters
  - KeyAttribute list =: finalKeyList
- 14. If *finalKeyList* is not equal *initialKeyList*, FAIL the test.

#### PASS -

· DUT passes all assertions.

### FAIL -

- DUT did not send DeleteKeyResponse message.
- DUT did not send GetAllKeysResponse message(s).

Note: The DUT may return an empty list at step 4.

# 5.2 Certificate Management

# 5.2.1 Create PKCS#10 certification requests

Test Case ID: ADVANCED SECURITY-2-1-1

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: CreatePKCS10CSR

WSDL Reference: security.wsdl

Test Purpose: To test the creation of a PKCS#10 certification requests.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair.

Test Configuration: ONVIF Client and DUT

#### **Test Procedure:**

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates an RSA key pair (out keyID) by following the procedure mentioned in Annex A.7.
- 4. ONVIF Client invokes CreatePKCS10CSR with parameters
  - Subject := subject (see Annex A.2)
  - KeyID := keyID
  - CSRAttribute skipped
  - SignatureAlgorithm.algorithm := 1.2.840.113549.1.1.5 (OID of SHA-1 with RSA Encryption algorithm)
- 5. The DUT responds with a CreatePKCS10CSRResponse message with parameters
  - PKCS10CSR =: PKCS10request

www.onvif.org

- 6. ONVIF Client validates that PKCS10request is correctly DER encoded (see Annex A.19).
- 7. If PKCS10request is incorrectly DER encoded, FAIL the test and go to the step 10.
- 8. ONVIF Client validates that PKCS10request contains the correct subject equals to subject.
- 9. If PKCS10request contains a wrong subject, FAIL the test and go to the step 10.
- 10. ONVIF Client deletes the RSA key pair (in key/D) by following the procedure mentioned in Annex A.1 to restore DUT configuration.

#### PASS -

DUT passes all assertions.

#### FAIL -

• DUT did not send CreatePKCS10CSRResponse message.

# 5.2.2 Create self-signed certificate

Test Case ID: ADVANCED SECURITY-2-1-2

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: CreateSelfSignedCertificate

WSDL Reference: security.wsdl

Test Purpose: To test the creation of self-signed certificates.

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate.

#### Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.

3. ONVIF Client creates an RSA key pair (out *keyID*) by following the procedure mentioned in Annex A.7.

JUVIE

- 4. ONVIF Client invokes CreateSelfSignedCertificate with parameters
  - X509Version skipped
  - KeyID := keyID
  - Subject := *subject* (see Annex A.2)
  - Alias skipped
  - notValidBefore skipped
  - notValidAfter skipped
  - SignatureAlgorithm.algorithm := 1.2.840.113549.1.1.5 (OID of SHA-1 with RSA Encryption algorithm)
  - SignatureAlgorithm.parameters skipped
  - SignatureAlgorithm.anyParameters skipped
  - Extension skipped
- 5. The DUT responds with a **CreateSelfSignedCertificateResponse** message with parameters
  - CertificateID =: *certID*
- 6. ONVIF Client deletes the self-signed certificate (in *certID*) and related RSA key pair (in *keyID*) by following the procedure mentioned in Annex A.9 to restore DUT configuration.

#### **Test Result:**

#### PASS -

• DUT passes all assertions.

# FAIL -

• DUT did not send CreateSelfSignedCertificateResponse message.

# 5.2.3 Upload certificate – Keystore contains private key

Test Case ID: ADVANCED\_SECURITY-2-1-3

www.onvif.org

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

### Feature under test: UploadCertificate

#### WSDL Reference: security.wsdl

**Test Purpose:** To test the upload of a certificate in case the keystore in the DUT contains a private key for the public key in the certificate.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. Current time of the DUT shall be at least Jan 01, 1970.

### Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a CA certificate (out CAcert) and a corresponding private key (out privateKey) by following the procedure described in Annex A.4.
- 4. ONVIF Client creates a certificate (out cert) from the PKCS#10 request with RSA key pair (out key/D1) and associated CA certificate (in CAcert) and a corresponding private key (in privateKey) by following the procedure described in Annex A.14.
- 5. ONVIF Client invokes UploadCertificate with parameters
  - Certificate := cert
  - Alias := "ONVIF Test"
  - PrivateKeyRequired : = true
- 6. The DUT responds with a UploadCertificateResponse message with parameters
  - CertificateID =: certID
  - KeyID =: keyID2
- 7. ONVIF Client validates that keyID2 equal to keyID1.

- 8. If keyID2 is not equal to keyID1, FAIL the test and go to the step 9.
- 9. ONVIF Client deletes the CA certificate (in certID) and related RSA key pair (in keyID1) by following the procedure mentioned in Annex A.9 to restore DUT configuration.

### PASS -

• DUT passes all assertions.

# FAIL -

DUT did not send UploadCertificateResponse message.

# 5.2.4 Upload certificate – Keystore contains private key (negative test)

# Test Case ID: ADVANCED SECURITY-2-1-4

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: UploadCertificate

WSDL Reference: security.wsdl

Test Purpose: To test the upload of a certificate in case the keystore in the DUT does not contain a private key for the public key in the certificate (negative test).

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. The DUT shall have enough free storage capacity for one additional certificate. Current time of the DUT shall be at least Jan 01, 1970.

#### Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a CA certificate (out CAcert) and a corresponding private key (out privateKey) by following the procedure described in Annex A.4.

- 4. ONVIF Client invokes UploadCertificate with parameters
  - Certificate := CAcert
  - Alias := "ONVIF Test"
  - PrivateKeyRequired := true
- 5. The DUT returns env:Receiver/ter:Action/ter:NoMatchingPrivateKey SOAP 1.2 fault.

### PASS -

DUT passes all assertions.

# FAIL -

 The DUT did not send the env:Receiver/ter:Action/ter:NoMatchingPrivateKey SOAP 1.2 fault message.

# 5.2.5 Upload certificate – Keystore does not contain private key

Test Case ID: ADVANCED\_SECURITY-2-1-5

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: UploadCertificate

WSDL Reference: security.wsdl

Test Purpose: To test the upload of a certificate in case the keystore in the DUT does not contain a private key for the public key in the certificate.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. Current time of the DUT shall be at least Jan 01, 1970.

#### Test Configuration: ONVIF Client and DUT

# **Test Procedure:**

1. Start an ONVIF Client.

- 2. Start the DUT.
- 3. ONVIF Client creates a CA certificate (out CAcert) and a corresponding private key (out privateKey) by following the procedure described in Annex A.4.
- 4. ONVIF Client invokes UploadCertificate with parameters
  - Certificate := CAcert
  - Alias := "ONVIF Test"
  - PrivateKeyRequired : = false
- 5. The DUT responds with a **UploadCertificateResponse** message with parameters
  - CertificateID =: certID
  - KeyID =: keyID
- 6. ONVIF Client deletes the CA certificate (in certID) and related RSA key pair (in keyID) by following the procedure mentioned in Annex A.9 to restore DUT configuration.

# PASS -

· DUT passes all assertions.

#### FAIL -

• DUT did not send UploadCertificateResponse message.

# 5.2.6 Get certificate - self-signed

Test Case ID: ADVANCED SECURITY-2-1-6

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: GetCertificate

WSDL Reference: security.wsdl

**Test Purpose:** To test the retrieval of a self-signed certificate.

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA

www.onvif.org

capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate.

### Test Configuration: ONVIF Client and DUT

### **Test Procedure:**

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a self-signed certificate (out *certID*) and related RSA key pair (out *keyID*) by following the procedure mentioned in Annex A.8.
- 4. ONVIF Client invokes GetCertificate message with parameters
  - CertificateID := certID
- 5. The DUT responds with a GetCertificateResponse message with parameters
  - Certificate =: *X509Cert*
- ONVIF Client validates that X509Cert.CertificateContent is correctly DER encoded (see Annex A.19).
- If *X509Cert*.CertificateContent is incorrectly DER encoded, FAIL the test and go to the step 10.
- 8. ONVIF Client validates that *X509Cert*.CertificateContent contains the correct subject equals to subject defined in Annex A.2.
- 9. If X509Cert.CertificateContent contains wrong subject, FAIL the test and go to the step 10.
- 10. ONVIF Client deletes the self-signed certificate (in *certID*) and related the RSA key pair (in *keyID*) by following the procedure mentioned in Annex A.9 to restore DUT configuration.

#### **Test Result:**

#### PASS -

• DUT passes all assertions.

### FAIL -

• DUT did not send GetCertificateResponse message.

# 5.2.7 Get certificate – CA

### Test Case ID: ADVANCED SECURITY-2-1-7

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: GetCertificate

WSDL Reference: security.wsdl

**Test Purpose:** To test the retrieval of a CA certificate.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. Current time of the DUT shall be at least Jan 01, 1970.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a CA certificate (out CAcert) and a corresponding private key (out privateKey) by following the procedure described in Annex A.4.
- 4. ONVIF Client uploads a CA certificate (out certID, in CAcert) and new RSA key pair with the public key from the CA certificate (out keyID) by following the procedure described in Annex A.15.
- 5. ONVIF Client invokes GetCertificate message with parameters
  - CertificateID := certID
- 6. The DUT responds with a GetCertificateResponse message with parameters
  - Certificate =: X509Cert
- 7. ONVIF Client validates that X509Cert.CertificateContent is correctly DER encoded (see Annex A.19).
- 8. If X509Cert.CertificateContent is incorrectly DER encoded, FAIL the test and go to the step 10.

- 9. If X509Cert.CertificateContent contains wrong subject, FAIL the test and go to the step 10.
- 10. ONVIF Client deletes the CA certificate (in *certID*) and related RSA key pair (in *keyID*) by following the procedure mentioned in Annex A.9 to restore DUT configuration.

#### PASS -

· DUT passes all assertions.

#### FAIL -

• DUT did not send GetCertificateResponse message.

# 5.2.8 Get all certificates - self signed

#### Test Case ID: ADVANCED SECURITY-2-1-8

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

#### Feature under test: GetAllCertificates

WSDL Reference: security.wsdl

**Test Purpose:** To test the retrieval of all certificates tested with self-signed certificates.

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate.

#### Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client invokes GetAllCertificates.
- 4. The DUT responds with a GetAllCertificatesResponse message with parameters
  - CertificateID list =: initialCertificateList

- 5. ONVIF Client creates a self-signed certificate (out certID) and related RSA key pair (out keyID) by following the procedure mentioned in Annex A.8.
- 6. ONVIF Client invokes GetAllCertificates.
- 7. The DUT responds with a GetAllCertificatesResponse message with parameters
  - CertificateID list =: updatedCertificateList
- 8. If updatedCertificateList does not contain certID and all certificates from initialCertificateList, FAIL the test, and go to the step 10.
- 9. If updatedCertificateList contains certificates other than certID or certificates from initialCertificateList, FAIL the test, and go to the step 10.
- 10. ONVIF Client deletes the self-signed certificate (in certID) and related RSA key pair (in key/D) by following the procedure mentioned in Annex A.9 to restore DUT configuration.

#### PASS -

DUT passes all assertions.

### FAIL -

DUT did not send GetAllCertificatesResponse message(s).

**Note:** The DUT may return an empty list at step 4.

# 5.2.9 Get All Certificate - CA

Test Case ID: ADVANCED SECURITY-2-1-9

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: GetAllCertificates

WSDL Reference: security.wsdl

Test Purpose: To test the retrieval of all certificates tested with CA certificates.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. Current time of the DUT shall be at least Jan 01, 1970.

# Test Configuration: ONVIF Client and DUT

#### **Test Procedure:**

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client invokes GetAllCertificates.
- 4. The DUT responds with a GetAllCertificatesResponse message with parameters
  - CertificateID list =: initialCertificateList
- 5. ONVIF Client creates a CA certificate (out CAcert) and a corresponding private key (out privateKey) by following the procedure described in Annex A.4.
- 6. ONVIF Client uploads a CA certificate (out certID, in CAcert) and new RSA key pair with the public key from the CA certificate (out keyID) by following the procedure described in Annex A.15.
- 7. ONVIF Client invokes GetAllCertificates.
- 8. The DUT responds with a GetAllCertificatesResponse message with parameters
  - CertificateID list =: updatedCertificateList
- 9. If updatedCertificateList does not contain certID and all certificates from initialCertificateList, FAIL the test, and go to the step 10.
- 10.If updatedCertificateList contains certificates other than certID or certificates from initialCertificateList, FAIL the test, and go to the step 10.
- 11. ONVIF Client deletes the CA certificate (in *certID*) and related RSA key pair (in *keyID*) by following the procedure mentioned in Annex A.9 to restore DUT configuration.

# **Test Result:**

### PASS -

DUT passes all assertions.

#### FAIL -

• DUT did not send GetAllCertificatesResponse message(s).

**Note:** The DUT may return an empty list at step 4.

# 5.2.10 Delete Certificate – self signed

Test Case ID: ADVANCED\_SECURITY-2-1-10

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: DeleteCertificate

WSDL Reference: security.wsdl

**Test Purpose:** To test the deletion of a certificate tested with self-signed certificates.

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client invokes GetAllCertificates.
- 4. The DUT responds with a GetAllCertificatesResponse message with parameters
  - CertificateID list =: initialCertificateList
- 5. ONVIF Client creates a self-signed certificate (out certID) and related RSA key pair (out *keyID*) by following the procedure mentioned in Annex A.8.
- 6. ONVIF Client invokes GetAllCertificates.
- 7. The DUT responds with a GetAllCertificatesResponse message with parameters
  - CertificateID list =: updatedCertificateList
- 8. If updatedCertificateList does not contain certID and all certificates from initialCertificateList, FAIL the test, delete the self-signed certificate (in certID) and related RSA key pair (in keyID)

by following the procedure mentioned in Annex A.9 to restore DUT configuration, and skip other steps.

- 9. If updatedCertificateList contains certificates other than certID or certificates from initialCertificateList, FAIL the test, delete the self-signed certificate (in certID) and related RSA key pair (in keyID) by following the procedure mentioned in Annex A.9 to restore DUT configuration, and skip other steps.
- 10. ONVIF Client invokes DeleteCertificate with parameters
  - CertificateID =: certID
- 11. The DUT responds with a **DeleteCertificateResponse** message.
- 12. ONVIF Client deletes the RSA key pair (in keyID) by following the procedure mentioned in Annex A.1 to restore DUT configuration.
- 13. ONVIF Client invokes GetAllCertificates.
- 14. The DUT responds with a GetAllCertificatesResponse message with parameters
  - CertificateID list =: finalCertificateList
- 15. If finalCertificateList is not equal initialCertificateList, FAIL the test.

#### Test Result:

#### PASS -

DUT passes all assertions.

# FAIL -

- DUT did not send DeleteCertificateResponse message.
- DUT did not send GetAllCertificatesResponse message(s).

**Note:** The DUT may return an empty list at step 4.

# 5.2.11 Delete Certificate – CA

Test Case ID: ADVANCED\_SECURITY-2-1-11

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: DeleteCertificate

#### WSDL Reference: security.wsdl

Test Purpose: To test the deletion of a certificate tested with CA certificates.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. Current time of the DUT shall be at least Jan 01, 1970.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client invokes GetAllCertificates.
- 4. The DUT responds with a GetAllCertificatesResponse message with parameters
  - CertificateID list =: initialCertificateList
- 5. ONVIF Client creates a CA certificate (out CAcert) and a corresponding private key (out privateKey) by following the procedure described in Annex A.4.
- 6. ONVIF Client uploads a CA certificate (out certID, in CAcert) and new RSA key pair with the public key from the CA certificate (out keyID) by following the procedure described in Annex A.15.
- 7. ONVIF Client invokes GetAllCertificates.
- 8. The DUT responds with a GetAllCertificatesResponse message with parameters
  - CertificateID list =: updatedCertificateList
- 9. If updatedCertificateList does not contain certID and all certificates from initialCertificateList, FAIL the test, delete the CA certificate (in certID) and related RSA key pair (in keyID) by following the procedure mentioned in Annex A.9 to restore DUT configuration, and skip other steps.
- 10. If updatedCertificateList contains certificates other than certID or certificates from initialCertificateList, FAIL the test, delete the CA certificate (in certID) and related RSA key pair (in keyID) by following the procedure mentioned in Annex A.9 to restore DUT configuration, and skip other steps.

#### 11. ONVIF Client invokes DeleteCertificate with parameters

- CertificateID =: certID
- 12. The DUT responds with a **DeleteCertificateResponse** message.
- 13. ONVIF Client deletes the RSA key pair (in keyID) by following the procedure mentioned in Annex A.1 to restore DUT configuration.
- 14. ONVIF Client invokes GetAllCertificates.
- 15. The DUT responds with a GetAllCertificatesResponse message with parameters
  - CertificateID list =: finalCertificateList
- 16. If finalCertificateList is not equal initialCertificateList, FAIL the test.

#### **Test Result:**

### PASS -

· DUT passes all assertions.

#### FAIL -

- DUT did not send DeleteCertificateResponse message.
- DUT did not send GetAllCertificatesResponse message(s).

Note: The DUT may return an empty list at step 4.

# 5.2.12 Create Certification Path – self-signed

Test Case ID: ADVANCED\_SECURITY-2-1-12

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: CreateCertificationPath

WSDL Reference: security.wsdl

Test Purpose: To test the creation of a certification path containing a self-signed certificate.

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability.

The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional certification path.

Test Configuration: ONVIF Client and DUT

# **Test Procedure:**

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a self-signed certificate (out certID) and related RSA key pair (out *keyID*) by following the procedure mentioned in Annex A.8.
- 4. ONVIF Client invokes CreateCertificationPath with parameters
  - CertficateIDs.CertificateID[0] := certID
  - Alias := "ONVIF Test"
- 5. The DUT responds with a CreateCertificationPathResponse message with parameters
  - CertificationPathID =: certPathID
- 6. ONVIF Client deletes the certification path (in certPathID) and related the self-signed certificate (in certID) and the RSA key pair (in keyID) by following the procedure mentioned in Annex A.5 to restore DUT configuration.

# **Test Result:**

#### PASS -

DUT passes all assertions.

# FAIL -

DUT did not send CreateCertificationPathResponse message.

# 5.2.13 Create Certification Path – CA

Test Case ID: ADVANCED\_SECURITY-2-1-13

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: CreateCertificationPath

#### WSDL Reference: security.wsdl

**Test Purpose:** To test the creation of a certification path (signed server + CA certificate).

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for two additional RSA key pairs. The DUT shall have enough free storage capacity for two additional certificates. The DUT shall have enough free storage capacity for one additional certification path. Current time of the DUT shall be at least Jan 01, 1970.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a CA certificate (out CAcert) and a corresponding private key (out privateKey) by following the procedure described in Annex A.4.
- 4. ONVIF Client creates and uploads a CA-signed certificate (out certID1) for RSA key pair (out keyID1) and associated CA certificate (in CAcert) and a corresponding private key (in privateKey) by following the procedure described in Annex A.16.
- 5. ONVIF Client uploads a CA certificate (out certID2, in CAcert) and new RSA key pair with the public key from the CA certificate (out keyID2) by following the procedure described in Annex A.15.
- 6. ONVIF Client invokes CreateCertificationPath with parameters
  - CertficateIDs.CertificateID[0] =: certID1
  - CertficateIDs.CertificateID[1] =: certID2
  - Alias := "ONVIF Test2"
- 7. The DUT responds with a CreateCertificationPathResponse message with parameters
  - CertificationPathID =: certPathID
- 8. ONVIF Client deletes the certification path (in certPathID), related CA certificate (in certID2) and the RSA key pair (in keyID2) and related the CA-signed certificate (in certID1) and the RSA key pair (in key/D1) by following the procedure mentioned in Annex A.17 to restore DUT configuration.

#### PASS -

DUT passes all assertions.

# FAIL -

DUT did not send CreateCertificationPathResponse message.

# 5.2.14 Get Certification Path – self-signed

# Test Case ID: ADVANCED\_SECURITY-2-1-14

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: GetCertificationPath

WSDL Reference: security.wsdl

Test Purpose: To test the retrieval of a certification path containing a self-signed certificate.

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional certification path.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a certification path (out certPathID) based on self-signed certificate (out certID1) and related RSA key pair (out keyID) by following the procedure mentioned in Annex A.11.
- 4. ONVIF Client invokes GetCertificationPath with parameters
  - CertificationPathID =: certPathID

- 5. The DUT responds with a GetCertificationPathResponse message with parameters
  - CertificationPath.CertificateID[0] =: certID2
  - CertificationPath.Alias
- 6. If certID1 is not equal to certID2, FAIL the test and go to the step 7.
- 7. ONVIF Client deletes the certification path (in certPathID1), related the self-signed certificate (in certID1) and the RSA key pair (in keyID1) by following the procedure mentioned in Annex A.5 to restore DUT configuration.

#### PASS -

· DUT passes all assertions.

#### FAIL -

• DUT did not send GetCertificationPathResponse message.

# 5.2.15 Get Certification Path – CA

Test Case ID: ADVANCED\_SECURITY-2-1-15

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: GetCertificationPath

WSDL Reference: security.wsdl

Test Purpose: To test the retrieval of a certification path containing a signed server and a CA certificate.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for two additional RSA key pairs. The DUT shall have enough free storage capacity for two additional certificates. The DUT shall have enough free storage capacity for one additional certification path. Current time of the DUT shall be at least Jan 01, 1970.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a certification path (out certPathID) based on CA-signed certificate (out certID1) and related RSA key pair (out keyID1) and a corresponding CA certificate (out certID2) and related RSA key pair (out keyID2) by following the procedure mentioned in Annex A.18.
- 4. ONVIF Client invokes GetCertificationPath message with parameters
  - CertificationPathID =: certPathID
- 5. The DUT responds with a GetCertificationPathResponse message with parameters
  - CertificationPath.CertificateID[0] =: certID3
  - CertificationPath.CertificateID[1] =: certID4
  - CertificationPath.Alias
- 6. If certID1 is not equal to certID3, FAIL the test and go to the step 8.
- 7. If certID2 is not equal to certID4, FAIL the test and go to the step 8.
- 8. ONVIF Client deletes the certification path (in certPathID), related CA certificate (in certID2) and the RSA key pair (in keyID2) and related the CA-signed certificate (in certID1) and the RSA key pair (in key/D1) by following the procedure mentioned in Annex A.17 to restore DUT configuration.

#### PASS -

· DUT passes all assertions.

#### FAIL -

- DUT did not send CreateCertificationPathResponse message.
- DUT did not send GetCertificationPathResponse message.

# 5.2.16 Get All Certification Paths - self-signed

# Test Case ID: ADVANCED\_SECURITY-2-1-16

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

#### Feature under test: GetAllCertificationPaths

#### WSDL Reference: security.wsdl

**Test Purpose:** To test the retrieval off all certification paths (self-signed certificate).

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional certification path.

#### Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client invokes GetAllCertificationPaths.
- 4. The DUT responds with a GetAllCertificationPathsResponse message with parameters
  - CertificationPathID list =: initialCertificationPathList
- 5. ONVIF Client creates a certification path (out certPathID) based on self-signed certificate (out certID1) and related RSA key pair (out keyID) by following the procedure mentioned in Annex A.11.
- 6. ONVIF Client invokes GetAllCertificationPaths.
- 7. The DUT responds with a **GetAllCertificationPathsResponse** message with parameters
  - CertificationPathID list =: updatedCertificationPathList
- 8. If updatedCertificationPathList does not contain certPathID and all certification paths from initialCertificationPathList, FAIL the test, and go to the step 10.
- 9. If updatedCertificationPathList contains certification paths other than certPathID or certification paths from *initialCertificationPathList*, FAIL the test, and go to the step 10.
- 10. ONVIF Client deletes the certification path (in certPathID), related the self-signed certificate (in *certID*) and the RSA key pair (in *keyID*) by following the procedure mentioned in Annex A.5 to restore DUT configuration.

#### PASS -

DUT passes all assertions.

### FAIL -

DUT did not send GetAllCertificationPathsResponse message(s).

Note: The DUT may return an empty list at step 4.

# 5.2.17 Get All Certification Paths – CA

Test Case ID: ADVANCED\_SECURITY-2-1-17

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: GetAllCertificationPaths

WSDL Reference: security.wsdl

**Test Purpose:** To test the retrieval off all certification paths (CA plus signed certificate).

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for two additional RSA key pairs. The DUT shall have enough free storage capacity for two additional certificates. The DUT shall have enough free storage capacity for one additional certification path. Current time of the DUT shall be at least Jan 01, 1970.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client invokes GetAllCertificationPaths.
- 4. The DUT responds with a GetAllCertificationPathsResponse message with parameters
  - CertificationPathID list =: initialCertificationPathList

- 5. ONVIF Client creates a certification path (out certPathID) based on CA-signed certificate (out certID1) and related RSA key pair (out keyID1) and a corresponding CA certificate (out certID2) and related RSA key pair (out keyID2) by following the procedure mentioned in Annex A.18.
- 6. ONVIF Client invokes GetAllCertificationPaths.
- 7. The DUT responds with a GetAllCertificationPathsResponse message with parameters
  - CertificationPathID list =: updatedCertificationPathList
- 8. If updatedCertificationPathList does not contain certPathID and all certification paths from initialCertificationPathList, FAIL the test, and go to the step 9.
- 9. If updatedCertificationPathList contains certification paths other than certPathID or certification paths from *initialCertificationPathList*, FAIL the test, and go to the step 9.
- 10. ONVIF Client deletes the certification path (in certPathID), related CA certificate (in certID2) and the RSA key pair (in keyID2) and related the CA-signed certificate (in certID1) and the RSA key pair (in key/D1) by following the procedure mentioned in Annex A.17 to restore DUT configuration.

### PASS -

DUT passes all assertions.

#### FAIL -

DUT did not send GetAllCertificationPathsResponse message(s).

**Note:** The DUT may return an empty list at step 4.

# 5.2.18 Delete Certification Path – self-signed

# Test Case ID: ADVANCED SECURITY-2-1-18

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: DeleteCertificationPath

WSDL Reference: security.wsdl

Test Purpose: To test the deletion of a certification path (self-signed certificate).

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional certification path.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client invokes GetAllCertificationPaths.
- 4. The DUT responds with a GetAllCertificationPathsResponse message with parameters
  - CertificationPathID list =: initialCertificationPathList
- 5. ONVIF Client creates a certification path (out certPathID) based on self-signed certificate (out certID) and related RSA key pair (out keyID) by following the procedure mentioned in Annex A.11.
- 6. ONVIF Client invokes GetAllCertificationPaths.
- 7. The DUT responds with a GetAllCertificationPathsResponse message with parameters
  - CertificationPathID list =: updatedCertificationPathList
- 8. If updatedCertificationPathList does not contain certPathID and all certification paths from initialCertificationPathList, FAIL the test, delete the certification path (in certPathID) and related self-signed certificate (in certID) and related RSA key pair (in keyID) by following the procedure mentioned in Annex A.5 to restore DUT configuration, and skip other steps.
- 9. If updatedCertificationPathList contains certification paths other than certPathID or certification paths from *initialCertificationPathList*, FAIL the test, delete the certification path (in certPathID) and related self-signed certificate (in certID) and related RSA key pair (in key/D) by following the procedure mentioned in Annex A.5 to restore DUT configuration, and skip other steps.
- 10. ONVIF Client invokes DeleteCertificationPath with parameters
  - CertificationPathID =: certPathID

- 11. The DUT responds with a **DeleteCertificationPathResponse** message.
- 12. ONVIF Client invokes GetAllCertificationPaths.
- 13. The DUT responds with a GetAllCertificationPathsResponse message with parameters
  - CertificationPathID list =: finalCertificationPathList
- 14. If finalCertificationPathList is not equal initialCertificationPathList, FAIL the test.

#### PASS -

• DUT passes all assertions.

#### FAIL -

- DUT did not send DeleteCertificationResponse message.
- DUT did not send GetAllCertificationPathsResponse message(s).

Note: The DUT may return an empty list at step 4.

# 5.2.19 Delete Certification Path - CA

Test Case ID: ADVANCED SECURITY-2-1-19

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: DeleteCertification

WSDL Reference: security.wsdl

**Test Purpose:** To test the deletion of a certification path (CA plus signed certificate).

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for two additional RSA key pairs. The DUT shall have enough free storage capacity for two additional certificates. The DUT shall have enough free storage capacity for one additional certification path. Current time of the DUT shall be at least Jan 01, 1970.

Test Configuration: ONVIF Client and DUT

www.onvif.org

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client invokes GetAllCertificationPaths.
- 4. The DUT responds with a GetAllCertificationPathsResponse message with parameters
  - CertificationPathID list =: initialCertificationPathList
- 5. ONVIF Client creates a certification path (out certPathID) based on CA-signed certificate (out certID1) and related RSA key pair (out keyID1) and a corresponding CA certificate (out certID2) and related RSA key pair (out keyID2) by following the procedure mentioned in Annex A.18.
- 6. ONVIF Client invokes GetAllCertificationPaths.
- 7. The DUT responds with a GetAllCertificationPathsResponse message with parameters
  - CertificationPathID list =: updatedCertificationPathList
- 8. If updatedCertificationPathList does not contain certPathID and all certification paths from initialCertificationPathList, FAIL the test, perform steps 9-12 to restore DUT settings, and skip other steps.
- 9. If updatedCertificationPathList contains certification paths other than certPathID or certification paths from initialCertificationPathList, FAIL the test, perform steps 9-12 to restore DUT settings, and skip other steps.
- 10. ONVIF Client invokes **DeleteCertificationPath** with parameters
  - CertificationPathID =: certPathID
- 11. The DUT responds with a DeleteCertificationPathResponse message.
- 12. ONVIF Client deletes the CA certificate (certID2) and related RSA key pair (keyID2) by following the procedure mentioned in Annex A.9 to restore DUT configuration.
- 13.ONVIF Client deletes the CA certificate (certID1) and related RSA key pair (keyID1) by following the procedure mentioned in Annex A.9 to restore DUT configuration.
- 14. ONVIF Client invokes GetAllCertificationPaths.
- 15. The DUT responds with a GetAllCertificationPathsResponse message with parameters
  - CertificationPathID list =: finalCertificationPathList

16. If finalCertificationPathList is not equal initialCertificationPathList, FAIL the test.

#### **Test Result:**

### PASS -

DUT passes all assertions.

### FAIL -

- DUT did not send GetAllCertificationPathsResponse message(s).
- DUT did not send DeleteCertificationPathResponse message.

Note: The DUT may return an empty list at step 4.

# 5.2.20 CreatePKCS10CSR – negative test

#### Test Case ID: ADVANCED\_SECURITY-2-1-20

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: CreatePKCS10CSR

WSDL Reference: security.wsdl

Test Purpose: To verify env:Sender\ter:InvalidArgVal\ter:InvalidKeyStatus is returned when key pair has status Generating.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PKCS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair.

# Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client invokes GetServiceCapabilities.
- 4. The DUT responds with GetServiceCapabilitiesResponse message with parameters
  - Capabilities =: cap

- 5. Set keyLength := (the smallest key length in the list of supported RSA key lengths (cap.RSAKeyLengths) that is greater than or equal to 1024).
- 6. If there is no such key length, set keyLength := (the largest supported RSA key length).
- 7. ONVIF Client invokes CreateRSAKeyPair message with parameters
  - KeyLength =: *keyLength*
- 8. The DUT responds with a CreateRSAKeyPairResponse message with parameters
  - KeyID =: keyID
  - EstimatedCreationTime =: duration
- 9. If duration is less than 2 sec:
  - 9.1. ONVIF Client deletes RSA key pair (in keyID) by following the procedure mentioned in Annex A.1.
  - 9.2. Set keyLength := (the smallest supported RSA key length that is larger than the current *keyLength*)
  - 9.3. If no such key length exists, log WARNING message, and PASS the test.
  - 9.4. Go to step 7.
- 10. ONVIF Client invokes CreatePKCS10CSR with parameters
  - Subject =: *subject* (see Annex A.2)
  - KeyID =: keyID
  - CSRAttribute skipped
  - SignatureAlgorithm.algorithm := 1.2.840.113549.1.1.5 (OID of SHA-1 with RSA Encryption algorithm)
- 11. If the DUT returns env:Sender\ter:InvalidArgVal\ter:InvalidKeyStatus SOAP 1.2 fault, go to step 13.
- 12. If the DUT returns normal CreatePKCS10CSRResponse message .:
  - 12.1. ONVIF Client deletes RSA key pair (in keyID) by following the procedure mentioned in Annex A.1.
  - 12.2. Set keyLength := (the smallest supported RSA key length that is larger than the current keyLength)

12.3. If no such key length exists, log WARNING message, and PASS the test.

12.4. Go to step 7.

13. ONVIF Client deletes the RSA key pair (in keyID) by following the procedure mentioned in Annex A.1 to restore DUT configuration.

#### **Test Result:**

#### PASS -

· DUT passes all assertions.

#### FAIL -

- The DUT did not send env:Sender\ter:InvalidArgVal\ter:InvalidKeyStatus SOAP 1.2 fault.
- DUT did not send CreateRSAKeyPair message.

# 5.2.21 DeleteCertificate – CA – Preserve Public Key

#### Test Case ID: ADVANCED\_SECURITY-2-1-21

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: DeleteCertificate

WSDL Reference: security.wsdl

**Test Purpose:** To test that the DUT does not delete the public key that is contained in the certificate from the keystore.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PKCS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. The DUT shall have enough free storage capacity for one additional key pair. The DUT shall have enough free storage capacity for one additional certificate. Current time of the DUT shall be at least Jan 01, 1970.

# Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.

- 3. ONVIF Client creates a CA certificate (out CAcert) and a corresponding private key (out privateKey) by following the procedure described in Annex A.4.
- 4. ONVIF Client uploads a CA certificate (out certID, in CAcert) and new RSA key pair with the public key from the CA certificate (out keyID) by following the procedure described in Annex A.15.
- 5. ONVIF Client invokes DeleteCertificate with parameters
  - CertificateID =: certID
- 6. The DUT responds with a **DeleteCertificateResponse** message.
- 7. ONVIF Client invokes GetAllKeys.
- 8. The DUT responds with a GetAllKeysResponse message where KeyAttribute list contains keyID.
- 9. ONVIF Client deletes the RSA key pair (in keyID) by following the procedure mentioned in Annex A.1 to restore DUT configuration.

#### PASS -

· DUT passes all assertions.

#### FAIL -

- The GetAllKeysResponse message at Step 8 does not contain key/D in KeyAttribute list.
- DUT did not send DeleteCertificateResponse message.
- DUT did not send GetAllKeysResponse message.

# 5.2.22 Upload certificate – delete linked key (negative test)

Test Case ID: ADVANCED\_SECURITY-2-1-22

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: UploadCertificate

WSDL Reference: security.wsdl

Test Purpose: To test the link of a certificate to RSA Key Pair by attempting to delete key of an uploaded certificate.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. Current time of the DUT shall be at least Jan 01, 1970.

## Test Configuration: ONVIF Client and DUT

## **Test Procedure:**

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a CA certificate (out CAcert) and a corresponding private key (out privateKey) by following the procedure described in Annex A.4.
- 4. ONVIF Client creates a certificate (out cert) from the PKCS#10 request with RSA key pair (out keyID1) and associated CA certificate (in CAcert) and a corresponding private key (in privateKey) by following the procedure described in Annex A.14.
- 5. ONVIF Client invokes UploadCertificate with parameters
  - Certificate := cert
  - Alias := "ONVIF Test"
  - PrivateKeyRequired : = true
- 6. The DUT responds with a UploadCertificateResponse message with parameters
  - CertificateID =: certID
  - KeyID =: keyID1
- 7. ONVIF Client invokes DeleteKey with parameters
  - KeyID =: keyID1
- 8. The DUT returns env:Sender\ter:InvalidArgVal\ter:ReferenceExists SOAP 1.2 fault.
- 9. ONVIF Client deletes the CA certificate (in certID) and related RSA key pair (in keyID1) by following the procedure mentioned in Annex A.9 to restore DUT configuration.

**Test Result:** 

PASS -

DUT passes all assertions.

## FAIL -

- The DUT did not send env:Sender\ter:InvalidArgVal\ter:ReferenceExists SOAP 1.2 fault.
- DUT did not send UploadCertificateResponse message.
- DUT did not send DeleteKeyResponse message.

# 5.2.23 Upload certificate – Upload malformed certificate (negative test)

Test Case ID: ADVANCED SECURITY-2-1-23

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: UploadCertificate

WSDL Reference: security.wsdl

Test Purpose: To verify that DUT produces InvalidArgVal\BadCertificate fault if UploadCertificate is invoked for a malformed X.509 certificate.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. Current time of the DUT shall be at least Jan 01, 1970.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a CA certificate (out CAcert) and a corresponding private key (out privateKey) by following the procedure described in Annex A.4.
- 4. ONVIF Client corrupts CAcert.
- 5. ONVIF Client invokes UploadCertificate with parameters

- Certificate := CAcert (malformed)
- Alias := "ONVIF\_Test"
- PrivateKeyRequired : = false
- 6. The DUT returns env:Sender\ter:InvalidArgVal\ter:BadCertificate SOAP 1.2 fault.

## Test Result:

## PASS -

DUT passes all assertions.

## FAIL -

- The DUT did not send env:Sender\ter:InvalidArgVal\ter:BadCertificate SOAP 1.2 fault.
- DUT did not send UploadCertificateResponse message.

# 5.2.24 Upload certificate – Upload expired certificate

## Test Case ID: ADVANCED SECURITY-2-1-24

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

## Feature under test: UploadCertificate

## WSDL Reference: security.wsdl

Test Purpose: To verify that DUT does not produce an InvalidArgVal\BadCertificate fault if UploadCertificate is invoked for an expired certificate.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. Current time of the DUT shall be at least Jan 01, 1970.

## Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.

- 3. ONVIF Client creates a CA certificate (out CAcert) and a corresponding private key (out privateKey) by following the procedure described in Annex A.22.
- 4. ONVIF Client invokes UploadCertificate with parameters
  - Certificate := CAcert
  - Alias := "ONVIF Test"
  - PrivateKeyRequired : = false
- 5. The DUT responds with a UploadCertificateResponse message with parameters
  - CertificateID =: certID
  - KeyID =: keyID
- 6. Check that the DUT does not return env:Sender\ter:InvalidArgVal\ter:BadCertificate SOAP 1.2 fault in UploadCertificateResponse.
- 7. ONVIF Client deletes the CA certificate (in certID) and related RSA key pair (in keyID) by following the procedure mentioned in Annex A.9 to restore DUT configuration.

## Test Result:

## PASS -

DUT passes all assertions.

## FAIL -

- The DUT send env:Sender\ter:InvalidArgVal\ter:BadCertificate SOAP 1.2 fault.
- DUT did not send UploadCertificateResponse message.

Note: If the DUT sends another SOAP 1.2 fault message, log WARNING message, and PASS the test.

# 5.2.25 CreateSelfSignedCertificate with PKCS#12

## Test Case ID: ADVANCED\_SECURITY-2-1-27

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: CreateSelfSignedCertificate

WSDL Reference: security.wsdl

www.onvif.org

**Test Purpose:** Verify that DUT correctly handles self-signed certificates that are based on keys uploaded to the DUT with PKCS#12.

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. Certificate along with an RSA private key in a PKCS#12 data structure upload is supported by the DUT as indicated by the PKCS12CertificateWithRSAPrivateKeyUpload capability. The DUT does not indicate that it requires that each certificate with private key has its own unique key as indicated by the NoPrivateKeySharing capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for two additional certificates. The DUT shall have enough free storage capacity for one additional certification path.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a CA certificate (out CAcert) and a corresponding public key (out publicKey) in the certificate along with the corresponding private key (out privateKey) in the form of a PKCS#12 file (out PKCS12data) and uploads it with certification path ID (out certificationPathID) and key pair ID (out keyID) by following the procedure described in Annex A.36.
- 4. ONVIF Client invokes CreateSelfSignedCertificate with parameters
  - X509Version skipped
  - KeyID := keyID
  - Subject := *subject* (see Annex A.34)
  - Alias skipped
  - notValidBefore skipped
  - notValidAfter skipped
  - SignatureAlgorithm.algorithm := 1.2.840.113549.1.1.5 (OID of SHA-1 with RSA Encryption algorithm)
  - · SignatureAlgorithm.parameters skipped
  - SignatureAlgorithm.anyParameters skipped

- · Extension skipped
- 5. The DUT responds with a **CreateSelfSignedCertificateResponse** message with parameters
  - CertificateID =: certID2
- 6. ONVIF Client invokes GetCertificate message with parameters
  - CertificateID := certID2
- 7. The DUT responds with a GetCertificateResponse message with parameters
  - Certificate =: *X509Cert1*
- 8. If X509Cert1.CertificateID is not equal to certID2, FAIL the test and go to the step 19.
- 9. If X509Cert1.KeyID is not equal to keyID, FAIL the test and go to the step 19.
- ONVIF Client validates that X509Cert1.CertificateContent is correctly DER encoded (see Annex A.19).
- 11. If *X509Cert1*.CertificateContent is incorrectly DER encoded, FAIL the test and go to the step 19.
- 12. ONVIF Client verifies that the subject in X509Cert1.CertificateContent is equal to subject.
- 13. If *X509Cert1*.CertificateContent contains a wrong subject, FAIL the test and go to the step 19.
- 14. ONVIF Client invokes GetAllCertificates.
- 15. The DUT responds with a GetAllCertificatesResponse message with parameters
  - CertificateID list =: certificateList1
- 16. If *certificateList1* does not contain certificate with Certificate.CertificateID equal to *certID2*, FAIL the test and go to the step 19.
- 17.Set:
  - certificateList1.Certificate[CertificateID = certID2] =: X509Cert2
- 18. If X509Cert1 is not equal X509Cert2, FAIL the test and go to the step 19.
- 19. ONVIF Client invokes DeleteCertificate with parameters
  - CertificateID =: certID

## 20. The DUT responds with a DeleteCertificateResponse message.

- 21. If test did not fail:
  - 21.1. ONVIF Client invokes GetAllCertificates
  - 21.2. The DUT responds with a GetAllCertificatesResponse message with parameters
    - CertificateID list =: certificateList2
  - 21.3. If *certificateList2* contains certificate with Certificate.CertificateID equal to *certID2*, FAIL the test and go to the step 22.
- 22. ONVIF Client deletes the certification path (in *certificationPathID*) and RSA key pair (in *keyID*) by following the procedure mentioned in Annex A.35 to restore DUT configuration and skip other steps.

## **Test Result:**

## PASS -

• DUT passes all assertions.

## FAIL -

- DUT did not send CreateSelfSignedCertificateResponse message.
- DUT did not send GetCertificateResponse message.
- DUT did not send **GetAllCertificatesResponse** message.
- DUT did not send DeleteCertificateResponse message.

Note: The following fields are compared at step 18:

- CertificateID
- KeylD
- Alias
- CertificateContent

# 5.2.26 Create PKCS#10 request with PKCS#12

Test Case ID: ADVANCED\_SECURITY-2-1-28

**Specification Coverage:** Certificate Management (ONVIF Security Configuration Service Specification)

#### Feature under test: CreatePKCS10CSR

#### WSDL Reference: security.wsdl

Test Purpose: Verify that DUT correctly generates a PKCS#10 request for a key pair that is uploaded with PKCS#12.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. Certificate along with an RSA private key in a PKCS#12 data structure upload is supported by the DUT as indicated by the PKCS12CertificateWithRSAPrivateKeyUpload capability. The DUT does not indicate that it requires that each certificate with private key has its own unique key as indicated by the NoPrivateKeySharing capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for two additional certificates. The DUT shall have enough free storage capacity for one additional certification path.

#### Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a CA certificate (out CAcert1) and a corresponding public key (out publicKey1) in the certificate along with the corresponding private key (out privateKey1) in the form of a PKCS#12 file (out PKCS12data) and uploads it with certification path ID (out certificationPathID1) and key pair ID (out keyID1) by following the procedure described in Annex A.36.
- 4. ONVIF Client invokes CreatePKCS10CSR with parameters
  - Subject := subject (see Annex A.2)
  - KeyID := keyID1
  - CSRAttribute skipped
  - SignatureAlgorithm.algorithm := 1.2.840.113549.1.1.5 (OID of SHA-1 with RSA Encryption algorithm)
- 5. The DUT responds with a CreatePKCS10CSRResponse message with parameters
  - PKCS10CSR =: PKCS10request
- 6. ONVIF Client creates a CA certificate (out CAcert2) with subject (in "CN=ONVIF TT2,C=US") and a corresponding public key (out publicKey2) in the certificate along with the

corresponding private key (out *privateKey2*) by following the procedure described in Annex A.4.

- 7. ONVIF Client creates a certificate (out *cert*) from the PKCS#10 request (in *PKCS10request*) and an associated CA certificate (in *CAcert2*) with related private key (in *priveteKey2*) by following the procedure described in Annex A.3.
- 8. ONVIF Client invokes UploadCertificate with parameters
  - Certificate := *cert*
  - Alias := "ONVIF\_Test"
  - PrivateKeyRequired : = true
- 9. The DUT responds with a UploadCertificateResponse message with parameters
  - CertificateID =: *certID2*
  - KeyID =: *keyID2*
- 10. If *keyID2* is not equal to *keyID1*, FAIL the test and go to step 24.
- 11. ONVIF Client invokes GetCertificate message with parameters
  - CertificateID := certID2
- 12. The DUT responds with a GetCertificateResponse message with parameters
  - Certificate =: *X509Cert1*
- 13. If X509Cert1.CertificateID is not equal to certID2, FAIL the test and go to the step 24.
- 14. If *X509Cert1*.KeyID is not equal to *keyID1*, FAIL the test and go to the step 24.
- 15. ONVIF Client validates that *X509Cert1*.CertificateContent is correctly DER encoded (see Annex A.19).
- 16. If *X509Cert1*.CertificateContent is incorrectly DER encoded, FAIL the test and go to the step 24.
- 17.ONVIF Client verifies that the subject in *X509Cert1*.CertificateContent is equal to "CN=ONVIF TT2,C=US".
- 18. If *X509Cert1*.CertificateContent contains a wrong subject, FAIL the test and go to the step 24.
- 19. ONVIF Client invokes GetAllCertificates.

www.onvif.org

#### 20. The DUT responds with a GetAllCertificatesResponse message with parameters

- CertificateID list =: certificateList1
- 21. If *certificateList1* does not contain certificate with Certificate.CertificateID equal to *certID2*, FAIL the test and go to the step 24.

**UNVIF**®

22. Set:

- certificateList1.Certificate[CertificateID = certID2] =: X509Cert2
- 23. If X509Cert1 is not equal X509Cert2, FAIL the test and go to the step 24.
- 24. ONVIF Client invokes DeleteCertificate with parameters
  - CertificateID =: certID2
- 25. The DUT responds with a **DeleteCertificateResponse** message.
- 26. If test did not fail:
  - 26.1. ONVIF Client invokes GetAllCertificates
  - 26.2. The DUT responds with a GetAllCertificatesResponse message with parameters
    - CertificateID list =: certificateList2
  - 26.3. If *certificateList2* contains certificate with Certificate.CertificateID equal to *certID2*, FAIL the test and go to the step 28.
- 27. If step 10 failed:
  - 27.1. ONVIF Client invokes DeleteKey with parameters
    - KeyID =: keyID2
  - 27.2. The DUT responds with a **DeleteKeyResponse** message.
- 28. ONVIF Client deletes the certification path (in *certificationPathID1*) and RSA key pair (in *keyID1*) by following the procedure mentioned in Annex A.35 to restore DUT configuration and skip other steps.

## **Test Result:**

## PASS -

DUT passes all assertions.

#### FAIL –

- DUT did not send CreatePKCS10CSRResponse message.
- DUT did not send UploadCertificateResponse message.
- DUT did not send GetCertificateResponse message.
- DUT did not send GetAllCertificatesResponse message.
- DUT did not send DeleteKeyResponse message.
- DUT did not send DeleteCertificateResponse message.

Note: The following fields are compared at step 23:

- CertificateID
- KeyID
- Alias
- CertificateContent

# 5.3 TLS Server

## 5.3.1 Certificate Management

## 5.3.1.1 Add Server Certificate Assignment – self-signed

Test Case ID: ADVANCED\_SECURITY-3-1-1

Specification Coverage: TLS Server (ONVIF Security Configuration Service Specification)

Feature under test: AddServerCertificateAssignment

WSDL Reference: security.wsdl

**Test Purpose:** To test the assignment of a self-signed certificate to a TLS server.

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional certification path. The DUT

shall have enough free storage capacity for one additional server certificate assignment. Network Configuration is supported by the DUT.

Test Configuration: ONVIF Client and DUT

## **Test Procedure:**

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client disables HTTPS and removes Server Certificate Assignment if required by following the procedure mentioned in Annex A.47 with the following input and output parameters
  - out initialHTTPSState initial HTTPS State
  - · out certPathID removed Server Certificate Assignment
- 4. ONVIF Client creates a certification path (out certPathID) based on self-signed certificate (out *certID1*) and related RSA key pair (out *keyID*) by following the procedure mentioned in Annex A.11.
- 5. ONVIF Client invokes AddServerCertificateAssignment with parameters
  - CertificationPathID =: certPathID
- 6. The DUT responds with an AddServerCertificateAssignmentResponse message.
- 7. ONVIF Client waits for time operationDelay.
- 8. ONVIF Client removes server certification assignment and deletes related certification path (in certPathID), self-signed certificate (in certID) and the RSA key pair (in keyID) by following the procedure mentioned in Annex A.12 to restore DUT configuration.
- 9. ONVIF Client restores HTTPS and Server Certificate Assignment if required by following the procedure mentioned in Annex A.48 with the following input and output parameters
  - in initialHTTPSState initial HTTPS State
  - in certPathID removed Server Certificate Assignment

#### **Test Result:**

#### PASS -

DUT passes all assertions.

## FAIL -

DUT did not send AddServerCertificateAssignmentResponse message.

# 5.3.1.2 Add Server Certificate Assignment – CA

Test Case ID: ADVANCED SECURITY-3-1-2

Specification Coverage: TLS Server (ONVIF Security Configuration Service Specification)

Feature under test: AddServerCertificateAssignment

WSDL Reference: security.wsdl

**Test Purpose:** To test the assignment of a certificate (signed + CA) to a TLS server.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for two additional RSA key pairs. The DUT shall have enough free storage capacity for two additional certificates. The DUT shall have enough free storage capacity for one additional certification path. The DUT shall have enough free storage capacity for one additional server certificate assignment. Current time of the DUT shall be at least Jan 01, 1970. Network Configuration is supported by the DUT.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client disables HTTPS and removes Server Certificate Assignment if required by following the procedure mentioned in Annex A.47 with the following input and output parameters
  - out initialHTTPSState initial HTTPS State
  - · out certPathID removed Server Certificate Assignment
- 4. ONVIF Client creates a certification path (out certPathID) based on CA-signed certificate (out certID1) and related RSA key pair (out keyID1) and a corresponding CA certificate (out certID2) and related RSA key pair (out keyID2) by following the procedure mentioned in Annex A.18.
- 5. ONVIF Client invokes AddServerCertificateAssignment with parameters

CertificationPathID =: certPathID

- 6. The DUT responds with an AddServerCertificateAssignmentResponse message.
- 7. ONVIF Client waits for time operationDelay.
- 8. ONVIF Client removes server certification assignment and deletes related certification path (in certPathID), related CA certificate (in certID2) and the RSA key pair (in keyID2) and related CA-signed certificate (in certID1) and RSA key pair (in keyID1) by following the procedure mentioned in Annex A.20 to restore DUT configuration.
- 9. ONVIF Client restores HTTPS and Server Certificate Assignment if required by following the procedure mentioned in Annex A.48 with the following input and output parameters
  - in initialHTTPSState initial HTTPS State
  - in certPathID removed Server Certificate Assignment

#### **Test Result:**

## PASS -

· DUT passes all assertions.

#### FAIL -

• DUT did not send AddServerCertificateAssignmentResponse message.

## 5.3.1.3 Replace Server Certificate Assignment – self-signed

Test Case ID: ADVANCED SECURITY-3-1-3

Specification Coverage: TLS Server (ONVIF Security Configuration Service Specification)

Feature under test: ReplaceServerCertificateAssignment

WSDL Reference: security.wsdl

Test Purpose: To test the replacement of a self-signed certificate to a TLS server.

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for two additional RSA key pairs. The DUT shall have enough free storage capacity for two additional certificates. The DUT shall have enough free storage capacity for two additional certification paths. The DUT

shall have enough free storage capacity for one additional server certificate assignment. Network Configuration is supported by the DUT.

## Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client disables HTTPS and removes Server Certificate Assignment if required by following the procedure mentioned in Annex A.47 with the following input and output parameters
  - out initialHTTPSState initial HTTPS State
  - out certPathID removed Server Certificate Assignment
- 4. ONVIF Client adds server certification assignment and creates related certification path (out *certPathID1*), the self-signed certificate (out *certID1*) and the RSA key pair (out *keyID1*) by following the procedure mentioned in Annex A.13.
- 5. ONVIF Client creates a certification path (out certPathID2) based on self-signed certificate (out *certID2*) and related RSA key pair (out *keyID2*) by following the procedure mentioned in Annex A.11.
- 6. ONVIF Client invokes ReplaceServerCertificateAssignment with parameters
  - OldCertificationPathID =: certPathID1
  - NewCertificationPathID =: certPathID2
- 7. The DUT responds with a **ReplaceServerCertificateAssignmentResponse** message.
- 8. ONVIF Client waits for time operationDelay.
- 9. ONVIF Client removes server certification assignment and deletes related certification path (certPathID2), the self-signed certificate (certID2) and the RSA key pair (keyID2) by following the procedure mentioned in Annex A.12 to restore DUT configuration.
- 10.ONVIF Client deletes the certification path (in certPathID1) and related the self-signed certificate (in certID1) and the RSA key pair (in keyID1) by following the procedure mentioned in Annex A.5 to restore DUT configuration.
- 11. ONVIF Client restores HTTPS and Server Certificate Assignment if required by following the procedure mentioned in Annex A.48 with the following input and output parameters

- in initialHTTPSState initial HTTPS State
- in certPathID removed Server Certificate Assignment

#### Test Result:

## PASS -

· DUT passes all assertions.

## FAIL -

• DUT did not send ReplaceServerCertificateAssignmentResponse message.

# 5.3.1.4 Replace Server Certificate Assignment – CA

## Test Case ID: ADVANCED SECURITY-3-1-4

Specification Coverage: TLS Server (ONVIF Security Configuration Service Specification)

Feature under test: ReplaceServerCertificateAssignment

WSDL Reference: security.wsdl

Test Purpose: To test the replacement of a signed and CA certificate to a TLS server.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for three additional RSA key pairs. The DUT shall have enough free storage capacity for three additional certificates. The DUT shall have enough free storage capacity for two additional certification paths. The DUT shall have enough free storage capacity for one additional server certificate assignment. Current time of the DUT shall be at least Jan 01, 1970. Network Configuration is supported by the DUT.

## Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client disables HTTPS and removes Server Certificate Assignment if required by following the procedure mentioned in Annex A.47 with the following input and output parameters

- out initialHTTPSState initial HTTPS State
- out certPathID removed Server Certificate Assignment
- 4. ONVIF Client creates a CA certificate (out CAcert) and a corresponding private key (out privateKey) by following the procedure described in Annex A.4.
- 5. ONVIF Client uploads a CA certificate (out certID1, in CAcert) and new RSA key pair with the public key from the CA certificate (out keyID1) by following the procedure described in Annex A.15.
- 6. ONVIF Client creates and uploads a CA-signed certificate (out certID2) for RSA key pair (out keyID2) and associated CA certificate (in CAcert) and a corresponding private key (in privateKey) by following the procedure described in Annex A.16.
- 7. ONVIF Client invokes CreateCertificationPath with parameters
  - CertficateIDs.CertificateID[0] := certID2
  - CertficateIDs.CertificateID[1] := certID1
  - Alias := "ONVIF\_TestPath1"
- 8. The DUT responds with a CreateCertificationPathResponse message with parameter
  - CertificationPathID =: certPathID1
- 9. ONVIF Client invokes AddServerCertificateAssignment with parameter
  - CertificationPathID := certPathID1
- 10. The DUT responds with an AddServerCertificateAssignmentResponse message.
- 11. ONVIF Client waits for time operationDelay.
- 12. ONVIF Client creates and uploads a CA-signed certificate (out certID3) for RSA key pair (out key/D3) and associated CA certificate (in CAcert) and a corresponding private key (in privateKey) by following the procedure described in Annex A.16.
- 13. ONVIF Client invokes CreateCertificationPath with parameters
  - CertficateIDs.CertificateID[0] := certID3
  - CertficateIDs.CertificateID[1] := certID1
  - Alias := "ONVIF\_TestPath2"
- 14. The DUT responds with a CreateCertificationPathResponse message with parameter

- CertificationPathID =: certPathID2
- 15. ONVIF Client invokes ReplaceServerCertificateAssignment with parameters
  - OldCertificationPathID := certPathID1
  - NewCertificationPathID := certPathID2
- 16. The DUT responds with a **ReplaceServerCertificateAssignmentResponse** message.
- 17. ONVIF Client waits for time operationDelay.
- 18.ONVIF Client deletes the certification path (in certPathID1) and related the self-signed certificate (in certID2) and the RSA key pair (in keyID2) by following the procedure mentioned in Annex A.5 to restore DUT configuration.
- 19. ONVIF Client removes server certification assignment and deletes related certification path (in certPathID2), related CA certificate (in certID1) and RSA key pair (in keyID1) and related CA-signed certificate (in certID3) and RSA key pair (in keyID3) by following the procedure mentioned in Annex A.20 to restore DUT configuration.
- 20. ONVIF Client restores HTTPS and Server Certificate Assignment if required by following the procedure mentioned in Annex A.48 with the following input and output parameters
  - in initialHTTPSState initial HTTPS State
  - in certPathID removed Server Certificate Assignment

#### Test Result:

#### PASS -

DUT passes all assertions.

#### FAIL -

- DUT did not send AddServerCertificateAssignmentResponse message.
- DUT did not send CreateCertificationPathResponse message(s).
- DUT did not send ReplaceServerCertificateAssignmentResponse message.

## 5.3.1.5 Get Assigned Server Certificates – self-signed

## Test Case ID: ADVANCED\_SECURITY-3-1-5

Specification Coverage: TLS Server (ONVIF Security Configuration Service Specification)

www.onvif.org

#### Feature under test: GetAssignedServerCertificates

#### WSDL Reference: security.wsdl

Test Purpose: To test the retrieval of a self-signed certificate assignment to a TLS server

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional certification path. The DUT shall have enough free storage capacity for one additional server certificate assignment. Network Configuration is supported by the DUT.

#### Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client disables HTTPS and removes Server Certificate Assignment if required by following the procedure mentioned in Annex A.47 with the following input and output parameters
  - out initialHTTPSState initial HTTPS State
  - · out certPathID removed Server Certificate Assignment
- 4. ONVIF Client invokes GetAssignedServerCertificates.
- 5. The DUT responds with a GetAssignedServerCertificatesResponse message with parameters
  - CertificationPathID list =: initialCertificationPathList
- 6. ONVIF Client adds server certification assignment and creates related certification path (out *certPathID*), the self-signed certificate (out *certID*) and the RSA key pair (out *keyID*) by following the procedure mentioned in Annex A.13.
- 7. ONVIF Client invokes GetAssignedServerCertificates.
- 8. The DUT responds with a GetAssignedServerCertificatesResponse message with parameters

CertificationPathID list =: updatedCertificationPathList

- 9. If updatedCertificationPathList does not contain certPathID and all certification paths from initialCertificationPathList, FAIL the test, and go to the step 11.
- 10. If updatedCertificationPathList contains certification paths other than certPathID or certification paths from initialCertificationPathList, FAIL the test, and go to the step 11.
- 11. ONVIF Client removes server certification assignment and deletes related certification path (in certPathID), self-signed certificate (in certID) and RSA key pair (in keyID) by following the procedure mentioned in Annex A.12 to restore DUT configuration.
- 12. ONVIF Client restores HTTPS and Server Certificate Assignment if required by following the procedure mentioned in Annex A.48 with the following input and output parameters
  - in initialHTTPSState initial HTTPS State
  - in certPathID removed Server Certificate Assignment

## **Test Result:**

## PASS -

DUT passes all assertions.

## FAIL -

DUT did not send GetAssignedServerCertificatesResponse message(s).

Note: The DUT may return an empty list at step 5.

# 5.3.1.6 Get Assigned Server Certificates – CA

Test Case ID: ADVANCED SECURITY-3-1-6

Specification Coverage: TLS Server (ONVIF Security Configuration Service Specification)

Feature under test: GetAssignedServerCertificates

WSDL Reference: security.wsdl

**Test Purpose:** To test the retrieval of certificate (signed + CA) assignment to a TLS server.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for two additional RSA key pairs. The DUT shall have enough free storage capacity for two additional certificates. The DUT shall have enough free storage capacity for one additional certification path. The DUT shall have enough free storage capacity for one additional server certificate assignment. Current time of the DUT shall be at least Jan 01, 1970. Network Configuration is supported by the DUT.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client disables HTTPS and removes Server Certificate Assignment if required by following the procedure mentioned in Annex A.47 with the following input and output parameters
  - out initialHTTPSState initial HTTPS State
  - out certPathID removed Server Certificate Assignment
- 4. ONVIF Client invokes GetAssignedServerCertificates.
- 5. The DUT responds with a GetAssignedServerCertificatesResponse message with parameters
  - CertificationPathID list =: initialCertificationPathList
- 6. ONVIF Client creates a certification path (out certPathID) based on CA-signed certificate (out certID1) and related RSA key pair (out keyID1) and a corresponding CA certificate (out certID2) and related RSA key pair (out keyID2) by following the procedure mentioned in Annex A.18.
- 7. ONVIF Client invokes AddServerCertificateAssignment with parameters
  - CertificationPathID =: certPathID
- 8. The DUT responds with an AddServerCertificateAssignmentResponse message.
- 9. ONVIF Client waits for time operationDelay.
- 10. ONVIF Client invokes GetAssignedServerCertificates
- 11. The DUT responds with a GetAssignedServerCertificatesResponse message with parameters

- CertificationPathID list =: updatedCertificationPathList
- 12. If updatedCertificationPathList does not contain certPathID and all certification paths from *initialCertificationPathList*, FAIL the test, and go to the step 14.
- 13. If updatedCertificationPathList contains certification paths other than certPathID or certification paths from *initialCertificationPathList*, FAIL the test, and go to the step 14.
- 14. ONVIF Client removes server certification assignment and deletes related certification path (in certPathID), related CA certificate (in certID2) and RSA key pair (in keyID2) and related CA-signed certificate (in certID1) and RSA key pair (in keyID1) by following the procedure mentioned in Annex A.20 to restore DUT configuration
- 15. ONVIF Client restores HTTPS and Server Certificate Assignment if required by following the procedure mentioned in Annex A.48 with the following input and output parameters
  - in initialHTTPSState initial HTTPS State
  - in certPathID removed Server Certificate Assignment

## **Test Result:**

## PASS -

· DUT passes all assertions.

## FAIL -

- DUT did not send GetAssignedServerCertificatesResponse message(s).
- DUT did not send AddServerCertificateAssignmentResponse message.

Note: The DUT may return an empty list at step 5.

# 5.3.1.7 Remove Server Certificate Assignment – self-signed

Test Case ID: ADVANCED\_SECURITY-3-1-7

Specification Coverage: TLS Server (ONVIF Security Configuration Service Specification)

Feature under test: RemoveServerCertificateAssignment

WSDL Reference:security.wsdl

**Test Purpose:** To test the removal of a self-signed certificate assignment on a TLS server.

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional certification path. The DUT shall have enough free storage capacity for one additional server certificate assignment. Network Configuration is supported by the DUT.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client disables HTTPS and removes Server Certificate Assignment if required by following the procedure mentioned in Annex A.47 with the following input and output parameters
  - out initialHTTPSState initial HTTPS State
  - out certPathID removed Server Certificate Assignment
- 4. ONVIF Client invokes GetAssignedServerCertificates.
- 5. The DUT responds with a GetAssignedServerCertificatesResponse message with parameters
  - CertificationPathID list =: initialCertificationPathList
- 6. ONVIF Client adds server certification assignment and creates related certification path (out certPathID), the self-signed certificate (out certID) and the RSA key pair (out keyID) by following the procedure mentioned in Annex A.13.
- 7. ONVIF Client invokes GetAssignedServerCertificates.
- 8. The DUT responds with a GetAssignedServerCertificatesResponse message with parameters
  - CertificationPathID list =: updatedCertificationPathList
- 9. If updatedCertificationPathList does not contain certPathID and all certification paths from initialCertificationPathList, FAIL the test, remove server certification assignment and deletes

related certification path (in certPathID), self-signed certificate (in certID) and RSA key pair (in keyID) by following the procedure mentioned in Annex A.12 to restore DUT configuration, and skip other steps.

- 10.If updatedCertificationPathList contains certification paths other than certPathID or certification paths from initialCertificationPathList, FAIL the test, remove server certification assignment and deletes related certification path (in certPathID), self-signed certificate (in certID) and RSA key pair (in keyID) by following the procedure mentioned in Annex A.12 to restore DUT configuration, and skip other steps.
- 11. ONVIF Client invokes RemoveServerCertificateAssignment .
  - CertificationPathID =: certPathID
- 12. The DUT responds with a **RemoveServerCertificateAssignmentResponse** message.
- 13. ONVIF Client waits for time operationDelay.
- 14. ONVIF Client deletes the certification path (in certPathID) and related the self-signed certificate (in *certID*) and the RSA key pair (in *keyID*) by following the procedure mentioned in Annex A.5 to restore DUT configuration.
- 15. ONVIF Client invokes GetAssignedServerCertificates.
- 16. The DUT responds with a GetAssignedServerCertificatesResponse message with parameters
  - CertificationPathID list =: finalCertificationPathList
- 17. If finalCertificationPathList is not equal initialCertificationPathList, FAIL the test.
- 18. ONVIF Client restores HTTPS and Server Certificate Assignment if required by following the procedure mentioned in Annex A.48 with the following input and output parameters
  - in initialHTTPSState initial HTTPS State
  - in certPathID removed Server Certificate Assignment

## **Test Result:**

## PASS -

DUT passes all assertions.

## FAIL -

DUT did not send RemoveServerCertificateAssignmentResponse message.

DUT did not send GetAssignedServerCertificatesResponse message(s).

**Note:** The DUT may return an empty list at step 5.

# 5.3.1.8 Remove Server Certificate Assignment – CA

Test Case ID: ADVANCED SECURITY-3-1-8

Specification Coverage: TLS Server (ONVIF Security Configuration Service Specification)

Feature under test:RemoveServerCertificateAssignment

WSDL Reference: security.wsdl

**Test Purpose:** To test the removal of certificate (signed + CA) assignment to a TLS server.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for two additional RSA key pairs. The DUT shall have enough free storage capacity for two additional certificates. The DUT shall have enough free storage capacity for one additional certification path. The DUT shall have enough free storage capacity for one additional server certificate assignment. Current time of the DUT shall be at least Jan 01, 1970. Network Configuration is supported by the DUT.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client disables HTTPS and removes Server Certificate Assignment if required by following the procedure mentioned in Annex A.47 with the following input and output parameters
  - out initialHTTPSState initial HTTPS State
  - · out certPathID removed Server Certificate Assignment
- 4. ONVIF Client invokes GetAssignedServerCertificates.
- 5. The DUT responds with a GetAssignedServerCertificatesResponse message with parameters

CertificationPathID list =: initialCertificationPathList

- 6. ONVIF Client creates a certification path (out certPathID) based on CA-signed certificate (out certID1) and related RSA key pair (out keyID1) and a corresponding CA certificate (out certID2) and related RSA key pair (out keyID2) by following the procedure mentioned in Annex A.18.
- 7. ONVIF Client invokes AddServerCertificateAssignment with parameters
  - CertificationPathID =: certPathID
- 8. The DUT responds with an AddServerCertificateAssignmentResponse message.
- 9. ONVIF Client waits for time operationDelay.
- 10. ONVIF Client invokes GetAssignedServerCertificates
- 11. The DUT responds with a GetAssignedServerCertificatesResponse message with parameters
  - CertificationPathID list =: updatedCertificationPathList
- 12. If updatedCertificationPathList does not contain certPathID and all certification paths from initialCertificationPathList, FAIL the test, perform steps 14-17 to restore DUT rotings, and skip other steps.
- 13.If updatedCertificationPathList contains certification paths other than certPathID or certification paths from initialCertificationPathList, FAIL the test, perform steps 14-17 to restore DUT settings, and skip other steps.
- 14. ONVIF Client invokes RemoveServerCertificateAssignment with parameters
  - CertificationPathID =: certPathID
- 15. The DUT responds with a **RemoveServerCertificateAssignmentResponse** message.
- 16. ONVIF Client waits for time operationDelay.
- 17. ONVIF Client deletes the certification path (in certPathID), related CA certificate (in certID2) and the RSA key pair (in keyID2) and related the CA-signed certificate (in certID1) and the RSA key pair (in key/D1) by following the procedure mentioned in Annex A.17 to restore DUT configuration.
- 18. ONVIF Client invokes GetAssignedServerCertificates.
- 19. The DUT responds with a GetAssignedServerCertificatesResponse message with parameters

- CertificationPathID list =: finalCertificationPathList
- 20. If finalCertificationPathList is not equal initialCertificationPathList, FAIL the test.
- 21. ONVIF Client restores HTTPS and Server Certificate Assignment if required by following the procedure mentioned in Annex A.48 with the following input and output parameters
  - in initialHTTPSState initial HTTPS State
  - in certPathID removed Server Certificate Assignment

## **Test Result:**

## PASS -

DUT passes all assertions.

#### FAIL -

- DUT did not send RemoveServerCertificateAssignmentResponse message.
- DUT did not send GetAssignedServerCertificatesResponse message.
- DUT did not send AddServerCertificateAssignmentResponse message.

Note: The DUT may return an empty list at step 5.

# 5.3.2 TLS Handshaking

## 5.3.2.1 Basic TLS Handshake

## Test Case ID: ADVANCED SECURITY-3-2-3

Specification Coverage: TLS Server (ONVIF Security Configuration Service Specification)

Feature under test: execute Basic TLS Handshake

WSDL Reference: security.wsdl

Test Purpose: Check TLS handshake with certificate.

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional certification path. The DUT shall have enough free storage capacity for one additional server certificate assignment. Network Configuration is supported by the DUT.

## Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client disables HTTPS and removes Server Certificate Assignment if required by following the procedure mentioned in Annex A.47 with the following input and output parameters
  - out initialHTTPSState initial HTTPS State
  - · out certPathID removed Server Certificate Assignment
- 4. ONVIF Client invokes GetNetworkProtocols to retrieve configured network protocols of the DUT.
- 5. The DUT responds with a GetNetworkProtocolsResponse message with parameters
  - NetworkProtocols list =: networkProtocolsList
- 6. If networkProtocolsList does not contain network protocol with NetworkProtocols.Name is equal to "HTTPS", FAIL the test and skip other steps.
- 7. ONVIF Client creates a certification path (out certPathID) based on self-signed certificate (out *certID*) and related RSA key pair (out *keyID*) by following the procedure mentioned in Annex A.11.
- 8. ONVIF Client invokes GetCertificate message with parameters
  - CertificateID := certID
- 9. The DUT responds with a GetCertificateResponse message with parameters
  - Certificate =: X509Cert
- 10. ONVIF Client invokes AddServerCertificateAssignment with parameters
  - CertificationPathID := certPathID
- 11. The DUT responds with an AddServerCertificateAssignmentResponse message.

### 12. ONVIF Client waits for time operationDelay.

- 13.If HTTPS protocol with NetworkProtocols.Name is equal to "HTTPS" from networkProtocolsList has NetworkProtocols.Enabled equal to true, go to the step 17.
- 14. ONVIF Client invokes SetNetworkProtocols message with parameters
  - NetworkProtocols[0].Name := HTTPS
  - NetworkProtocols[0].Enabled := true
  - NetworkProtocols[0].Port := 443
  - NetworkProtocols[0].Extension skipped
- 15. The DUT responds with a SetNetworkProtocolsResponse message.
- 16. ONVIF Client waits for time operationDelay.
- 17. ONVIF Client checks that HTTPS protocol Port is open. If HTTPS protocol portHTTPS is not open, FAIL the test and go to the step 19.
- 18. ONVIF Client verifies basic TLS handshake with expecting Server Certificate (in certPathID) using specified port (in *portHTTPS*) by following the procedure mentioned in Annex A.21.
- 19. If HTTPS protocol with NetworkProtocols.Name is equal to "HTTPS" from networkProtocolsList has NetworkProtocols.Enabled equal to true, go to the step 23.
- 20. ONVIF Client invokes SetNetworkProtocols message with parameters
  - NetworkProtocols list := networkProtocolsList
- 21. The DUT responds with a SetNetworkProtocolsResponse message.
- 22. ONVIF Client waits for time operationDelay.
- 23. ONVIF Client removes server certification assignment and deletes related certification path (in *certPathID*), self-signed certificate (in *certID*) and the RSA key pair (in *keyID*) by following the procedure mentioned in Annex A.12 to restore DUT configuration.
- 24. ONVIF Client restores HTTPS and Server Certificate Assignment if required by following the procedure mentioned in Annex A.48 with the following input and output parameters
  - in initialHTTPSState initial HTTPS State
  - in certPathID removed Server Certificate Assignment

## Test Result:

### PASS -

· DUT passes all assertions.

#### FAIL -

- DUT did not send GetNetworkProtocolsResponse message(s).
- DUT did not send GetCertificateResponse message(s).
- DUT did not send AddServerCertificateAssignmentResponse message(s).
- The DUT did not provide Basic TLS handshake at step 18.

Note: The corresponding to HTTPS port number (portHTTPS) from networkProtocolsList shall be used in case HTTPS protocol was enabled in networkProtocolsList. Otherwise, 443 port number shall be used.

Note: If the DUT presents Certificate which is not equal to X509Cert during the Annex A.21 execution, log WARNING message.

**Note:** *operationDelay* will be taken from Operation Delay field of ONVIF Device Test Tool.

# 5.3.2.2 Basic TLS Handshake after Replace Server Certificate Assignment

Test Case ID: ADVANCED SECURITY-3-2-4

Specification Coverage: TLS Server (ONVIF Security Configuration Service Specification)

Feature under test: ReplaceServerCertificateAssignment

WSDL Reference: security.wsdl

Test Purpose: Check TLS handshake with replaced certificate.

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for two additional RSA key pairs. The DUT shall have enough free storage capacity for two additional certificates. The DUT shall have enough free storage capacity for two additional certification paths. The DUT shall have enough free storage capacity for one additional server certificate assignment. There is no server certificate assignment at the device. Network Configuration is supported by the DUT.

#### Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client disables HTTPS and removes Server Certificate Assignment if required by following the procedure mentioned in Annex A.47 with the following input and output parameters
  - out initialHTTPSState initial HTTPS State
  - out certPathID removed Server Certificate Assignment
- 4. ONVIF Client invokes GetNetworkProtocols to retrieve configured network protocols of the DUT.
- 5. The DUT responds with a GetNetworkProtocolsResponse message with parameters
  - NetworkProtocols list =: networkProtocolsList
- 6. If networkProtocolsList does not contain network protocol with NetworkProtocols.Name is equal to "HTTPS", FAIL the test, restore the DUT state, and skip other steps.
- 7. ONVIF Client adds server certification assignment and creates related certification path (out *certPathID1*), the self-signed certificate (out *certID1*) and the RSA key pair (out *keyID1*) by following the procedure mentioned in Annex A.13.
- 8. ONVIF Client invokes GetCertificate message with parameters
  - CertificateID := certID1
- 9. The DUT responds with a GetCertificateResponse message with parameters
  - Certificate =: X509Cert1
- 10. If HTTPS protocol with NetworkProtocols.Name is equal to "HTTPS" from networkProtocolsList has NetworkProtocols.Enabled equal to true, go to the step 14.
- 11. ONVIF Client invokes SetNetworkProtocols message with parameters
  - NetworkProtocols[0].Name := HTTPS
  - NetworkProtocols[0].Enabled := true
  - NetworkProtocols[0].Port := 443

- NetworkProtocols[0].Extension skipped
- 12. The DUT responds with a SetNetworkProtocolsResponse message.
- 13. ONVIF Client waits for time operationDelay.
- 14. ONVIF Client checks that HTTPS protocol Port is open. If HTTPS protocol portHTTPS is not open, FAIL the test, restore the DUT state, and skip other steps.
- 15. ONVIF Client verifies basic TLS handshake with expecting Server Certificate (in certPathID1) using specified port (in portHTTPS) by following the procedure mentioned in Annex A.21.
- 16. ONVIF Client creates a certification path (out certPathID2) based on self-signed certificate (out certID2) and related RSA key pair (out keyID2) by following the procedure mentioned in Annex A.11.
- 17. ONVIF Client invokes ReplaceServerCertificateAssignment with parameters
  - OldCertificationPathID =: certPathID1
  - NewCertificationPathID =: certPathID2
- The DUT responds with a ReplaceServerCertificateAssignmentResponse message.
- 19. ONVIF Client waits for time operationDelay.
- 20. ONVIF Client invokes GetCertificate message with parameters
  - CertificateID := certID2
- 21. The DUT responds with a GetCertificateResponse message with parameters
  - Certificate =: X509Cert2
- 22.ONVIF Client verifies basic TLS handshake with expecting Server Certificate (in certPathID2) using specified port (in portHTTPS) by following the procedure mentioned in Annex A.21
- 23.ONVIF Client selects network protocol with Name ="HTTPS" in networkProtocolsList (received in step 5) and saves this protocol in HTTPProtocol variable.
- 24. ONVIF Client invokes SetNetworkProtocols message with parameters
  - NetworkProtocols[0] := HTTPProtocol
- 25. The DUT responds with a SetNetworkProtocolsResponse message.

ONVIF Security Configuration Device Test Specification Version 20.12

- 26. ONVIF Client removes server certification assignment and deletes related certification path (certPathID2), the self-signed certificate (certID2) and the RSA key pair (keyID2) by following the procedure mentioned in Annex A.12 to restore DUT configuration.
- 27. ONVIF Client deletes the certification path (in certPathID1) and related the self-signed certificate (in certID1) and the RSA key pair (in keyID1) by following the procedure mentioned in Annex A.5 to restore DUT configuration.

## Test Result:

## PASS -

· DUT passes all assertions.

## FAIL -

- DUT did not send GetNetworkProtocolsResponse message.
- DUT did not send GetCertificateResponse message.
- DUT did not send ReplaceServerCertificateAssignmentResponse message.
- The DUT did not provide Basic TLS handshake at step 15.
- The DUT did not provide Basic TLS handshake at step 22.

Note: The corresponding to HTTPS port number (portHTTPS) from networkProtocolsList shall be used in case HTTPS protocol was enabled in networkProtocolsList. Otherwise, 443 port number shall be used.

Note: If the DUT presents Certificate which is not equal to X509Cert during the Annex A.21 execution, log WARNING message.

**Note:** *operationDelay* will be taken from Operation Delay field of ONVIF Device Test Tool.

# 5.3.2.3 Basic TLS Handshake with Replace Server Certification Path and PKCS#12

Test Case ID: ADVANCED SECURITY-3-2-5

Specification Coverage: TLS Server (ONVIF Security Configuration Service Specification)

#### WSDL Reference: security.wsdl

Test Purpose: Verify that DUT correctly performs TLS handshake after replace of server certification path with PKCS#12.

Pre-Requisite: Security Configuration Service is received from the DUT. Certificate along with an RSA private key in a PKCS#12 data structure upload is supported by the DUT as indicated by the PKCS12CertificateWithRSAPrivateKeyUpload capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for two additional certificates. The DUT shall have enough free storage capacity for two additional certification paths. The DUT shall have enough free storage capacity for one additional server certificate assignment. There is no server certificate assignment at the device. Network Configuration is supported by the DUT.

## Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client disables HTTPS and removes Server Certificate Assignment if required by following the procedure mentioned in Annex A.47 with the following input and output parameters
  - out initialHTTPSState initial HTTPS State
  - out certPathID removed Server Certificate Assignment
- 4. ONVIF Client invokes GetNetworkProtocols to retrieve configured network protocols of the DUT.
- 5. The DUT responds with a GetNetworkProtocolsResponse message with parameters
  - NetworkProtocols list =: networkProtocolsList
- 6. If networkProtocolsList does not contain network protocol with NetworkProtocols.Name is equal to "HTTPS", FAIL the test and skip other steps.
- 7. Set
  - portHTTPS =: networkProtocolsList.NetworkProtocols[Name = "HTTPS"].Port
- 8. ONVIF Client creates a CA certificate (out CAcert1) and a corresponding public key (out publicKey1) in the certificate along with the corresponding private key (out privateKey1) in

the form of a PKCS#12 file (out *PKCS12data1*) by following the procedure described in Annex A.30.

- 9. ONVIF Client invokes **UploadCertificateWithPrivateKeyInPKCS12** message with parameters
  - CertWithPrivateKey := PKCS12data1
  - CertificationPathAlias := "ONVIF\_CertificationPath\_Test"
  - KeyAlias := "ONVIF\_Key\_Test"
  - IgnoreAdditionalCertificates := false
  - IntegrityPassphraseID skipped
  - EncryptionPassphraseID skipped
- 10. The DUT responds with an **UploadCertificateWithPrivateKeyInPKCS12Response** message with parameters
  - CertificationPathID =: certPathID1
  - KeyID =: keyID1
- 11. ONVIF Client invokes AddServerCertificateAssignment with parameters
  - CertificationPathID := certPathID1
- 12. The DUT responds with an AddServerCertificateAssignmentResponse message.
- 13. ONVIF Client waits for time operationDelay.
- 14. If HTTPS protocol with NetworkProtocols.Name is equal to "HTTPS" from *networkProtocolsList* has NetworkProtocols.Enabled equal to true, go to the step 19.
- 15. ONVIF Client invokes SetNetworkProtocols message with parameters
  - NetworkProtocols[0].Name := HTTPS
  - NetworkProtocols[0].Enabled := true
  - NetworkProtocols[0].Port := 443
  - NetworkProtocols[0].Extension skipped
- 16. The DUT responds with a **SetNetworkProtocolsResponse** message.
- 17. ONVIF Client waits for time operationDelay.

#### 18. Set

- *portHTTPS* =: 443
- 19. ONVIF Client checks that HTTPS protocol Port is open. If HTTPS protocol portHTTPS is not open, FAIL the test and go to the step 39.
- 20. ONVIF Client verifies basic TLS handshake with expecting Server Certificate (in certPathID1) using specified port (in portHTTPS) by following the procedure mentioned in Annex A.21.
- 21. If the DUT presents Certificate which is not equal to PKCS12data1 during the Annex A.21 execution, FAIL the test and go to the step 39.
- 22.ONVIF Client creates a CA certificate (out CAcert2) with subject (in "CN=ONVIF TT2,C=US") and a corresponding public key (out publicKey2) in the certificate along with the corresponding private key (out privateKey2) in the form of a PKCS#12 file (out *PKCS12data2*) by following the procedure described in Annex A.30.
- 23. ONVIF Client invokes UploadCertificateWithPrivateKeyInPKCS12 message with parameters
  - CertWithPrivateKey := PKCS12data2
  - CertificationPathAlias := "ONVIF CertificationPath Test2"
  - KeyAlias := "ONVIF Key Test2"
  - IgnoreAdditionalCertificates := false
  - IntegrityPassphraseID skipped
  - EncryptionPassphraseID skipped
- 24. The DUT responds with an UploadCertificateWithPrivateKeyInPKCS12Response message with parameters
  - CertificationPathID =: certPathID2
  - KeyID =: keyID2
- 25. ONVIF Client invokes ReplaceServerCertificateAssignment with parameters
  - OldCertificationPathID =: certPathID1
  - NewCertificationPathID =: certPathID2
- 26. The DUT responds with a **ReplaceServerCertificateAssignmentResponse** message.

- 27. ONVIF Client waits for time operationDelay.
- 28. ONVIF Client invokes GetAssignedServerCertificates.
- 29. The DUT responds with a GetAssignedServerCertificatesResponse message with parameters
  - CertificationPathID list =: certificationPathIDList
- 30. If certificationPathIDList contains certification path with CertificationPathID equal to certPathID1, FAIL the test and go to the step 38.
- 31. If certificationPathIDList does not contain certification path with CertificationPathID equal to *certPathID2*, FAIL the test and go to the step 38.
- 32. ONVIF Client checks that HTTPS protocol Port is open. If HTTPS protocol portHTTPS is not open, FAIL the test and go to the step 35.
- 33. ONVIF Client verifies basic TLS handshake with expecting Server Certificate (in certPathID2) using specified port (in portHTTPS) by following the procedure mentioned in Annex A.21.
- 34. If the DUT presents Certificate which is not equal to X509Cert during the Annex A.21 execution, FAIL the test and go to the step 35.
- 35. ONVIF Client invokes RemoveServerCertificateAssignment with parameters
  - CertificationPathID := certPathID2
- 36. The DUT responds with a **RemoveServerCertificateAssignmentResponse** message.
- 37. ONVIF Client waits for time operationDelay.
- 38. ONVIF Client deletes the certification path (in certPathID2) and RSA key pair (in keyID2) by following the procedure mentioned in Annex A.35 to restore DUT configuration.
- 39. ONVIF Client deletes the certification path (in certPathID1) and RSA key pair (in keyID1) by following the procedure mentioned in Annex A.35 to restore DUT configuration.
- 40. ONVIF Client invokes SetNetworkProtocols message with parameters
  - NetworkProtocols := networkProtocolsList
- 41. The DUT responds with a **SetNetworkProtocolsResponse** message.
- 42. ONVIF Client waits for time operationDelay.

- 43. ONVIF Client restores HTTPS and Server Certificate Assignment if required by following the procedure mentioned in Annex A.48 with the following input and output parameters
  - in initialHTTPSState initial HTTPS State
  - in certPathID removed Server Certificate Assignment

## PASS –

• DUT passes all assertions.

## FAIL -

- DUT did not send GetNetworkProtocolsResponse message.
- DUT did not send SetNetworkProtocolsResponse message.
- DUT did not send UploadCertificateWithPrivateKeyInPKCS12Response message.s.
- DUT did not send AddServerCertificateAssignmentResponse message.s.
- DUT did not send ReplaceServerCertificateAssignmentResponse message.
- DUT did not send GetAssignedServerCertificatesResponse message.
- DUT did not send RemoveServerCertificateAssignmentResponse message.
- The DUT did not provide Basic TLS handshake at Step 20.
- The DUT did not provide Basic TLS handshake at Step 33.

**Note:** The corresponding to HTTPS port number (*portHTTPS*) from *networkProtocolsList* shall be used in case HTTPS protocol was enabled in *networkProtocolsList*. Otherwise, 443 port number shall be used.

Note: operationDelay will be taken from Operation Delay field of ONVIF Device Test Tool.

# 5.3.3 TLS client authentication

# 5.3.3.1 TLS client authentication – self-signed TLS server certificate with on-device RSA key pair

# Test Case ID: ADVANCED\_SECURITY-3-3-1

Specification Coverage: TLS Server (ONVIF Security Configuration Service Specification)

www.onvif.org

Feature under test: GetClientAuthenticationRequired, SetClientAuthenticationRequired, AddCertPathValidationPolicyAssignment

WSDL Reference: security.wsdl

**Test Purpose:** To test the assignment of a self-signed certificate to a TLS server.

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. TLS client authentication is supported by the DUT as indicated by the TLSClientAuthSupported capability. The DUT shall have enough free storage capacity for two additional RSA key pairs. The DUT shall have enough free storage capacity for two additional certificates. The DUT shall have enough free storage capacity for one additional certification path. The DUT shall have enough free storage capacity for one additional server certificate assignment. The DUT shall have enough free storage capacity for one additional certification path validation policy. The DUT shall have enough free storage capacity for one additional certification path validation policy assignment. Network Configuration is supported by the DUT.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client disables HTTPS and removes Server Certificate Assignment if required by following the procedure mentioned in Annex A.47 with the following input and output parameters
  - out initialHTTPSState initial HTTPS State
  - · out certPathID removed Server Certificate Assignment
- 4. ONVIF Client invokes GetNetworkProtocols to retrieve configured network protocols of the DUT.
- 5. The DUT responds with a GetNetworkProtocolsResponse message with parameters
  - NetworkProtocols list =: networkProtocolsList
- 6. If networkProtocolsList does not contain network protocol with NetworkProtocols.Name is equal to "HTTPS", FAIL the test and skip other steps.

#### 7. Set

- portHTTPS =: networkProtocolsList.NetworkProtocols[Name = "HTTPS"].Port
- 8. ONVIF Client invokes GetClientAuthenticationRequired.
- 9. The DUT responds with a GetClientAuthenticationRequiredResponse message with parameters
  - clientAuthenticationRequired =: clientAuthenticationRequired
- 10. ONVIF Client adds server certification assignment and creates related certification path (out certPathID0), the self-signed certificate (out certID0) and the RSA key pair (out keyID0) by following the procedure mentioned in Annex A.13.
- 11. ONVIF Client creates a CA certificate (out CAcert1) with subject (in "CN=ONVIF1 TT,C=US") and a corresponding public key (out *publicKey1*) in the certificate along with the corresponding private key (out privateKey1) by following the procedure described in Annex A.4.
- 12. ONVIF Client uploads a CA certificate (out certID1, in CAcert1) and new RSA key pair with the public key from the CA certificate (out keyID1) by following the procedure described in Annex A.15.
- 13. ONVIF Client creates a certificate (out cert2) signed by private key (in privateKey1) of the CA-certificate (in CAcert1) with subject (in "CN=ONVIF2 TT,C=US") and a corresponding public key (out *publicKey2*) in the certificate along with the corresponding private key (out privateKey2) by following the procedure described in Annex A.43.
- 14.ONVIF Client creates a CA certificate (out CAcert3) with subject (in "CN=ONVIF3 TT,C=US") and a corresponding public key (out *publicKey3*) in the certificate along with the corresponding private key (out privateKey3) by following the procedure described in Annex A.4.
- 15. ONVIF Client creates a certificate (out cert4) signed by private key (in privateKey3) of the CA-certificate (in CAcert3) with subject (in "CN=ONVIF4 TT,C=US") and a corresponding public key (out *publicKey4*) in the certificate along with the corresponding private key (out privateKey4) by following the procedure described in Annex A.43.
- 16.ONVIF Client creates certification path validation policy (out certPathValidationPolicyID) with specified alias (in "Test CertPathValidationPolicy Alias") and the certificate identifier (in certID1) for trust anchor by following the procedure mentioned in Annex A.44.
- 17. ONVIF Client invokes AddCertPathValidationPolicyAssignment with parameters
  - CertPathValidationPolicyID := certPathValidationPolicyID

- 18. The DUT responds with an **AddCertPathValidationPolicyAssignmentResponse** message.
- 19. If HTTPS protocol with NetworkProtocols.Name is equal to "HTTPS" from *networkProtocolsList* has NetworkProtocols.Enabled equal to true, go to the step 24.
- 20. ONVIF Client invokes SetNetworkProtocols message with parameters
  - NetworkProtocols[0].Name := HTTPS
  - NetworkProtocols[0].Enabled := true
  - NetworkProtocols[0].Port := 443
  - NetworkProtocols[0].Extension skipped
- 21. The DUT responds with a **SetNetworkProtocolsResponse** message.
- 22. ONVIF Client waits for time operationDelay.
- 23. Set
  - *portHTTPS* := 443.
- 24. If *clientAuthenticationRequired* is equal to false:
  - 24.1. ONVIF Client invokes SetClientAuthenticationRequired with parameters
    - clientAuthenticationRequired := true
  - 24.2. The DUT responds with a **SetClientAuthenticationRequiredResponse** message.
- 25. ONVIF Client invokes **GetClientAuthenticationRequired** through HTTPS using the client certificate *cert2* and port *portHTTPS*.
- 26. The DUT responds with a **GetClientAuthenticationRequiredResponse** message with parameters
  - clientAuthenticationRequired =: clientAuthenticationRequired1
- 27. ONVIF Client invokes **GetClientAuthenticationRequired** through HTTPS using the client certificate *cert4* and port *portHTTPS*.
- 28. The DUT does not establish a TLS connection.
- 29. If *clientAuthenticationRequired* is equal to false:
  - 29.1. ONVIF Client invokes SetClientAuthenticationRequired with parameters

clientAuthenticationRequired := false

29.2. The DUT responds with a SetClientAuthenticationRequiredResponse message.

- 30. ONVIF Client invokes SetNetworkProtocols message with parameters
  - NetworkProtocols := networkProtocolsList
- 31. The DUT responds with a **SetNetworkProtocolsResponse** message.
- 32. ONVIF Client waits for time operationDelay.
- 33. ONVIF Client invokes RemoveCertPathValidationPolicyAssignment with parameters
  - CertPathValidationPolicyID := certPathValidationPolicyID
- 34. The DUT responds with a RemoveCertPathValidationPolicyAssignmentResponse message.
- 35. ONVIF Client deletes the certification path validation policy (in certPathValidationPolicyID) by following the procedure mentioned in Annex A.40 to restore DUT configuration.
- 36. ONVIF Client deletes the CA certificate (in certID1) and related RSA key pair (in keyID1) by following the procedure mentioned in Annex A.9 to restore DUT configuration.
- 37. ONVIF Client removes server certification assignment and deletes related certification path (in certPathID0), self-signed certificate (in certID0) and RSA key pair (in keyID0) by following the procedure mentioned in Annex A.12 to restore DUT configuration.
- 38. ONVIF Client restores HTTPS and Server Certificate Assignment if required by following the procedure mentioned in Annex A.48 with the following input and output parameters
  - in initialHTTPSState initial HTTPS State
  - in certPathID removed Server Certificate Assignment

## Test Result:

#### PASS -

DUT passes all assertions.

## FAIL -

- DUT did not send RemoveCertPathValidationPolicyAssignmentResponse message.
- DUT did not send SetNetworkProtocolsResponse message.

- DUT did not send SetClientAuthenticationRequiredResponse message.
- The DUT establishes a TLS connection for step 28.
- DUT did not send GetClientAuthenticationRequiredResponse message.
- DUT did not send AddCertPathValidationPolicyAssignmentResponse message.
- DUT did not send GetNetworkProtocolsResponse message.

Note: operationDelay will be taken from Operation Delay field of ONVIF Device Test Tool.

# 5.3.3.2 CRL processing with on-device RSA key pair

Test Case ID: ADVANCED SECURITY-3-3-2

Specification Coverage: TLS Server (ONVIF Security Configuration Service Specification)

Feature under test: GetClientAuthentication, SetClientAuthenticationRequired

#### WSDL Reference: security.wsdl

**Test Purpose:** To test the assignment of a self-signed certificate to a TLS server.

Pre-Requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. CRLs supported by the DUT as indicated by the MaximumNumberOfCRLs capability. TLS client authentication is supported by the DUT as indicated by the TLSClientAuthSupported capability. The DUT shall have enough free storage capacity for two additional RSA key pairs. The DUT shall have enough free storage capacity for two additional certificates. The DUT shall have enough free storage capacity for one additional certification path. The DUT shall have enough free storage capacity for one additional server certificate assignment. The DUT shall have enough free storage capacity for one additional certification path validation policy. The DUT shall have enough free storage capacity for one additional CRL. The DUT shall have enough free storage capacity for one additional certification path validation policy assignment. Network Configuration is supported by the DUT.

# Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.

- 3. ONVIF Client disables HTTPS and removes Server Certificate Assignment if required by following the procedure mentioned in Annex A.47 with the following input and output parameters
  - out initialHTTPSState initial HTTPS State
  - out certPathID removed Server Certificate Assignment
- 4. ONVIF Client invokes **GetNetworkProtocols** to retrieve configured network protocols of the DUT.
- 5. The DUT responds with a GetNetworkProtocolsResponse message with parameters
  - NetworkProtocols list =: networkProtocolsList

- 7. Set
  - *portHTTPS* =: *networkProtocolsList*.NetworkProtocols[Name = "HTTPS"].Port
- 8. ONVIF Client invokes GetClientAuthenticationRequired.
- 9. The DUT responds with a **GetClientAuthenticationRequiredResponse** message with parameters
  - clientAuthenticationRequired =: *clientAuthenticationRequired*
- 10. ONVIF Client adds server certification assignment and creates related certification path (out *certPathID0*), the self-signed certificate (out *certID0*) and the RSA key pair (out *keyID0*) by following the procedure mentioned in Annex A.13.
- 11. ONVIF Client creates a CA certificate (out *CAcert1*) with subject (in "CN=ONVIF1 TT,C=US") and a corresponding public key (out *publicKey1*) in the certificate along with the corresponding private key (out *privateKey1*) by following the procedure described in Annex A.4.
- 12. ONVIF Client uploads a CA certificate (out *certID1*, in *CAcert1*) and new RSA key pair with the public key from the CA certificate (out *keyID1*) by following the procedure described in Annex A.15.
- 13. ONVIF Client creates a certificate (out cert2) signed by private key (in privateKey1) of the CA-certificate (in CAcert1) with subject (in "CN=ONVIF2 TT,C=US") and a corresponding public key (out publicKey2) in the certificate along with the corresponding private key (out privateKey2) by following the procedure described in Annex A.43.

- 14. ONVIF Client creates a certificate (out cert3) signed by private key (in privateKey1) of the CA-certificate (in CAcert1) with subject (in "CN=ONVIF3 TT,C=US") and a corresponding public key (out *publicKey3*) in the certificate along with the corresponding private key (out privateKey3) by following the procedure described in Annex A.43.
- 15. ONVIF Client creates a CRL (out crl) for certificate revocation (in cert3) signed by private key (in *privateKey1*) by following the procedure mentioned in Annex A.45.
- 16.ONVIF Client uploads a CRL (in crl) with alias (in "ONVIF CRL Test") identifier (out crlID) by following the procedure described in Annex A.39.
- 17. ONVIF Client creates certification path validation policy (out certPathValidationPolicyID) with specified alias (in "Test CertPathValidationPolicy Alias") and the certificate identifier (in certID1) for trust anchor by following the procedure mentioned in Annex A.44.
- 18. ONVIF Client invokes AddCertPathValidationPolicyAssignment with parameters
  - CertPathValidationPolicyID := certPathValidationPolicyID
- 19. The DUT responds with an AddCertPathValidationPolicyAssignmentResponse message.
- 20. If HTTPS protocol with NetworkProtocols.Name is equal to "HTTPS" from networkProtocolsList has NetworkProtocols.Enabled equal to true, go to the step 25.
- 21. ONVIF Client invokes SetNetworkProtocols message with parameters
  - NetworkProtocols[0].Name := HTTPS
  - NetworkProtocols[0].Enabled := true
  - NetworkProtocols[0].Port := 443
  - NetworkProtocols[0].Extension skipped
- 22. The DUT responds with a SetNetworkProtocolsResponse message.
- 23. ONVIF Client waits for time operationDelay.
- 24. Set
  - *portHTTPS* := 443.
- 25. If *clientAuthenticationRequired* is equal to false:
  - 25.1. ONVIF Client invokes SetClientAuthenticationRequired with parameters
    - clientAuthenticationRequired := true

25.2. The DUT responds with a SetClientAuthenticationRequiredResponse message.

- 26. ONVIF Client invokes **GetClientAuthenticationRequired** through HTTPS using the client certificate *cert2* and port *portHTTPS*.
- 27. The DUT responds with a **GetClientAuthenticationRequiredResponse** message with parameters
  - clientAuthenticationRequired =: clientAuthenticationRequired1
- 28. ONVIF Client invokes **GetClientAuthenticationRequired** through HTTPS using the client certificate *cert3* and port *portHTTPS*.
- 29. The DUT does not establish a TLS connection.
- 30. If *clientAuthenticationRequired* is equal to false:
  - 30.1. ONVIF Client invokes SetClientAuthenticationRequired with parameters
    - clientAuthenticationRequired := false
  - 30.2. The DUT responds with a SetClientAuthenticationRequiredResponse message.
- 31. ONVIF Client invokes SetNetworkProtocols message with parameters
  - NetworkProtocols := networkProtocolsList
- 32. The DUT responds with a SetNetworkProtocolsResponse message.
- 33. ONVIF Client waits for time operationDelay.
- 34. ONVIF Client invokes RemoveCertPathValidationPolicyAssignment with parameters
  - CertPathValidationPolicyID := certPathValidationPolicyID
- 35. The DUT responds with a **RemoveCertPathValidationPolicyAssignmentResponse** message.
- 36. ONVIF Client deletes the certification path validation policy (in *certPathValidationPolicyID*) by following the procedure mentioned in Annex A.40 to restore DUT configuration.
- 37. ONVIF Client deletes the CRL (in *crIID*) by following the procedure mentioned in Annex A.38 to restore DUT configuration.
- 38. ONVIF Client deletes the CA certificate (in *certID1*) and related RSA key pair (in *keyID1*) by following the procedure mentioned in Annex A.9 to restore DUT configuration.

- 39. ONVIF Client removes server certification assignment and deletes related certification path (in certPathID0), self-signed certificate (in certID0) and RSA key pair (in keyID0) by following the procedure mentioned in Annex A.12 to restore DUT configuration.
- 40. ONVIF Client restores HTTPS and Server Certificate Assignment if required by following the procedure mentioned in Annex A.48 with the following input and output parameters
  - in initialHTTPSState initial HTTPS State
  - in certPathID removed Server Certificate Assignment

# PASS -

· DUT passes all assertions.

## FAIL -

- DUT did not send RemoveCertPathValidationPolicyAssignmentResponse message.
- DUT did not send SetNetworkProtocolsResponse message.
- DUT did not send SetClientAuthenticationRequiredResponse message.
- The DUT establishes a TLS connection for step 29.
- DUT did not send GetClientAuthenticationRequiredResponse message.
- DUT did not send AddCertPathValidationPolicyAssignmentResponse message.
- DUT did not send GetNetworkProtocolsResponse message.

Note: operationDelay will be taken from Operation Delay field of ONVIF Device Test Tool.

# 5.3.3.3 Replace certification path validation policy assignment

## Test Case ID: ADVANCED SECURITY-3-3-3

Specification Coverage: Certification Path Validation Policy Management (ONVIF Security Configuration Service Specification)

Feature under test: ReplaceCertPathValidationPolicyAssignment, **GetAssignedCertPathValidationPolicies** 

## WSDL Reference: security.wsdl

www.onvif.org

**Test Purpose:** Verify that DUT correctly supports replacing certification path validation policy assignments.

Pre-Requisite: Configuration Security Service is received from the DUT. Certification path validation policy supported by the DUT as indicated by the MaximumNumberOfCertificationPathValidationPolicies capability. TLS client authentication is supported by the DUT as indicated by the TLSClientAuthSupported capability. The DUT shall have enough free storage capacity for two additional certification path validation policies. The DUT shall have enough free storage capacity for one additional certification path. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional certification path validation policy assignment.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- ONVIF Client creates certification path validation policy identifier (out *certPathValidationPolicyID1*) with specified alias (in "Test CertPathValidationPolicy1 Alias"), related certificate (out *certID*), RSA key pair (out *keyID*) and certification path if any (out *certificationPathID*) by following the procedure mentioned in Annex A.42.
- 4. ONVIF Client creates certification path validation policy identifier (out *certPathValidationPolicyID2*) with specified alias (in "Test CertPathValidationPolicy2 Alias") and the certificate identifier (in *certID*) for trust anchor by following the procedure mentioned in Annex A.44.
- 5. ONVIF Client invokes AddCertPathValidationPolicyAssignment with parameters
  - CertPathValidationPolicyID := certPathValidationPolicyID1
- 6. The DUT responds with an **AddCertPathValidationPolicyAssignmentResponse** message.
- 7. ONVIF Client invokes ReplaceCertPathValidationPolicyAssignment with parameters
  - OldCertPathValidationPolicyID := certPathValidationPolicyID1
  - NewCertPathValidationPolicyID := certPathValidationPolicyID2
- 8. The DUT responds with a **ReplaceCertPathValidationPolicyAssignmentResponse** message.

- ONVIF Client invokes GetAssignedCertPathValidationPolicies.
- 10. The DUT responds with a GetAssignedCertPathValidationPoliciesResponse message with parameters
  - CertPathValidationPolicyID list =: certPathValidationPolicyIDList
- certPathValidationPolicyIDList contains CertPathValidationPolicyID 11. lf equal to certPathValidationPolicyID1, FAIL the test and go to the step 14.
- 12. If certPathValidationPolicyIDList does not contain CertPathValidationPolicyID equal to certPathValidationPolicyID2, FAIL the test and go to the step 19.
- 13. Go to the step 17.
- 14. ONVIF Client invokes RemoveCertPathValidationPolicyAssignment with parameters
  - CertPathValidationPolicyID := certPathValidationPolicyID1
- 15. The DUT responds with a RemoveCertPathValidationPolicyAssignmentResponse message.
- 16. Go to the step 19.
- 17. ONVIF Client invokes RemoveCertPathValidationPolicyAssignment with parameters
  - CertPathValidationPolicyID := certPathValidationPolicyID2
- 18. The DUT responds with a RemoveCertPathValidationPolicyAssignmentResponse message.
- 19. ONVIF Client invokes DeleteCertPathValidationPolicy with parameters
  - CertPathValidationPolicyID := certPathValidationPolicyID2
- 20. DUT responds with a DeleteCertPathValidationPolicyResponse message.
- 21. ONVIF Client deletes the certification path validation policy (in certPathValidationPolicyID1) by following the procedure mentioned in Annex A.40 to restore DUT configuration.
- 22. If certificationPathID is null:
  - 22.1. ONVIF Client deletes the self-signed certificate (in certID) and related the RSA key pair (in *keyID*) by following the procedure mentioned in Annex A.9.
  - 22.2. Skip other steps.
- 23. If certificationPathID is not null:

www.onvif.org

23.1. ONVIF Client deletes the certification path (in *certificationPathID*) and RSA key pair (in *keyID*) by following the procedure mentioned in Annex A.35 to restore DUT configuration.

# Test Result:

# PASS –

• DUT passes all assertions.

# FAIL –

- DUT did not send AddCertPathValidationPolicyAssignmentResponse message.
- DUT did not send ReplaceCertPathValidationPolicyAssignmentResponse message.
- DUT did not send GetAssignedCertPathValidationPoliciesResponse message.
- DUT did not send RemoveCertPathValidationPolicyAssignmentResponse message.
- DUT did not send DeleteCertPathValidationPolicyResponse message.

# 5.4 Referential Integrity

# 5.4.1 TLS Server Certificate - self-signed

## Test Case ID: ADVANCED\_SECURITY-4-1-1

**Specification Coverage:** Key Management (ONVIF Security Configuration Service Specification), Certificate Management (ONVIF Security Configuration Service Specification), TLS Server (ONVIF Security Configuration Service Specification)

Feature under test: DeleteKey, DeleteCertificate. DeleteCertificationPath

WSDL Reference: security.wsdl

Test Purpose: To test the referential integrity of certificate assigned to a TLS server.

**Pre-Requisite:** Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional certificate.

shall have enough free storage capacity for one additional server certificate assignment. Network Configuration is supported by the DUT.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client disables HTTPS and removes Server Certificate Assignment if required by following the procedure mentioned in Annex A.47 with the following input and output parameters
  - out initialHTTPSState initial HTTPS State
  - · out certPathID removed Server Certificate Assignment
- 4. ONVIF Client adds server certification assignment and creates related certification path (out certPathID), the self-signed certificate (out certID) and the RSA key pair (out keyID) by following the procedure mentioned in Annex A.13.
- 5. ONVIF Client invokes DeleteKey with parameters
  - KeyID =: keyID
- 6. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.
- 7. ONVIF Client invokes DeleteCertificate with parameters
  - CertificateID =: certID
- 8. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.
- 9. ONVIF Client invokes DeleteCertificationPath with parameters
  - CertificationPathID =: certPathID
- 10. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.
- 11. ONVIF Client invokes RemoveServerCertificateAssignment .
  - CertificationPathID =: certPathID
- 12. The DUT responds with a **RemoveServerCertificateAssignmentResponse** message.
- 13. ONVIF Client waits for time operationDelay.

#### 14. ONVIF Client invokes DeleteKey with parameters

- KeyID =: keyID
- 15. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.
- 16. ONVIF Client invokes DeleteCertificate with parameters
  - CertificateID =: certID
- 17. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.
- 18. ONVIF Client invokes DeleteCertificationPath with parameters
  - CertificationPathID =: certPathID
- 19. The DUT responds with a DeleteCertificationPathResponse message.
- 20. ONVIF Client invokes DeleteKey with parameters
  - KeyID =: keyID
- 21. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.
- 22. ONVIF Client deletes the self-signed certificate (in certID) and related RSA key pair (in keyID) by following procedure mentioned in Annex A.9 to restore DUT configuration.
- 23. ONVIF Client restores HTTPS and Server Certificate Assignment if required by following the procedure mentioned in Annex A.48 with the following input and output parameters
  - in initialHTTPSState initial HTTPS State
  - in certPathID removed Server Certificate Assignment

# Test Result:

#### PASS -

· DUT passes all assertions.

#### FAIL -

- DUT did not send DeleteCertificationPathResponse message.
- DUT did not send RemoveServerCertificateAssignmentResponse message.
- The DUT did not send the env:Receiver/ter:Action/ter:NoMatchingPrivateKey SOAP 1.2 fault message(s).

# 5.4.2 TLS Server Certificate - CA

# Test Case ID: ADVANCED\_SECURITY-4-1-2

Specification Coverage: Key Management (ONVIF Security Configuration Service Specification), Certificate Management (ONVIF Security Configuration Service Specification), TLS Server (ONVIF Security Configuration Service Specification)

Feature under test: DeleteKey, DeleteCertificate. DeleteCertificationPath

WSDL Reference: security.wsdl

**Test Purpose:**To test the referential integrity of certificate assigned to a TLS server.

Pre-Requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for two additional RSA key pairs. The DUT shall have enough free storage capacity for two additional certificates. The DUT shall have enough free storage capacity for one additional certification path. The DUT shall have enough free storage capacity for one additional server certificate assignment. Current time of the DUT shall be at least Jan 01, 1970. Network Configuration is supported by the DUT.

#### Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client disables HTTPS and removes Server Certificate Assignment if required by following the procedure mentioned in Annex A.47 with the following input and output parameters
  - out initialHTTPSState initial HTTPS State
  - · out certPathID removed Server Certificate Assignment
- 4. ONVIF Client creates a certification path (out certPathID) based on CA-signed certificate (out certID1) and related RSA key pair (out keyID1) and a corresponding CA certificate (out certID2) and related RSA key pair (out keyID2) by following the procedure mentioned in Annex A.18.
- 5. ONVIF Client invokes AddServerCertificateAssignment with parameters

- CertificationPathID := certPathID
- 6. The DUT responds with an AddServerCertificateAssignmentResponse message.
- 7. ONVIF Client waits for time operationDelay.
- 8. ONVIF Client invokes **DeleteKey** with parameters
  - KeyID =: keyID1
- 9. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.
- 10. ONVIF Client invokes DeleteKey with parameters
  - KeyID =: *keyID2*
- 11. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.
- 12. ONVIF Client invokes DeleteCertificate with parameters
  - CertificateID =: certID1
- 13. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.
- 14. ONVIF Client invokes DeleteCertificate with parameters
  - CertificateID =: certID2
- 15. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.
- 16. ONVIF Client invokes DeleteCertificationPath with parameters
  - CertificationPathID =: certPathID
- 17. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.
- 18. ONVIF Client invokes RemoveServerCertificateAssignment .
  - CertificationPathID =: certPathID
- 19. The DUT responds with a **RemoveServerCertificateAssignmentResponse** message.
- 20. ONVIF Client waits for time operationDelay.
- 21. ONVIF Client invokes DeleteKey with parameters
  - KeyID =: keyID1
- 22. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.

#### 23. ONVIF Client invokes DeleteKey with parameters

- KeyID =: keyID2
- 24. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.
- 25. ONVIF Client invokes DeleteCertificate with parameters
  - CertificateID =: certID1
- 26. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.
- 27. ONVIF Client invokes DeleteCertificate with parameters
  - CertificateID =: certID2
- 28. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.
- 29. ONVIF Client invokes DeleteCertificationPath with parameters
  - CertificationPathID =: certPathID
- 30. The DUT responds with a DeleteCertificationPathResponse message.
- 31. ONVIF Client invokes DeleteKey with parameters
  - KeyID =: keyID1
- 32. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.
- 33. ONVIF Client invokes DeleteKey with parameters
  - KeyID =: keyID2
- 34. The DUT returns env:Sender/ter:InvalidArgVal/ter:ReferenceExists SOAP 1.2 fault.
- 35. ONVIF Client deletes the self-signed certificate (in certID1) and related RSA key pair (in *keyID1*) by following the procedure mentioned in Annex A.9 to restore DUT configuration.
- 36. ONVIF Client deletes the self-signed certificate (in certID2) and related RSA key pair (in *keyID2*) by following the procedure mentioned in Annex A.9 to restore DUT configuration.
- 37. ONVIF Client restores HTTPS and Server Certificate Assignment if required by following the procedure mentioned in Annex A.48 with the following input and output parameters
  - in initialHTTPSState initial HTTPS State
  - in certPathID removed Server Certificate Assignment

## PASS -

DUT passes all assertions.

# FAIL -

- DUT did not send DeleteCertificationPathResponse message.
- DUT did not send RemoveServerCertificateAssignmentResponse message.
- DUT did not send AddServerCertificateAssignmentResponse message.
- The DUT did not send the env:Receiver/ter:Action/ter:NoMatchingPrivateKey SOAP 1.2 fault message(s).

# 5.5 Capabilities

# 5.5.1 Security Configuration Service Capabilities

Test Case ID: ADVANCED SECURITY-5-1-1

Specification Coverage: Capabilities (ONVIF Security Configuration Service Specification)

Feature under test: GetServiceCapabilities (for Security Configuration Service)

WSDL Reference: security.wsdl

Test Purpose: To verify DUT Security Configuration Service Capabilities.

Pre-Requisite: Security Configuration Service is received from the DUT.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client invokes GetServiceCapabilities.
- 4. The DUT responds with a GetServiceCapabilitiesResponse message with parameters
  - Capabilities =: cap
- 5. If cap.KeystoreCapabilities.MaximumNumberOfCertificates > 0:

- 5.1. If *cap*.KeystoreCapabilities.MaximumNumberOfKeys <= 0 or skipped, FAIL the test.
- 6. If *cap*.KeystoreCapabilities.MaximumNumberOfCertificationPaths > 0:
  - 6.1. If *cap*.KeystoreCapabilities.MaximumNumberOfCertificates < 2 or skipped, FAIL the test.
- 7. If *cap*.KeystoreCapabilities.RSAKeyPairGeneration = true:
  - 7.1. If cap.KeystoreCapabilities.RSAKeyLenghts is empty or skipped, FAIL the test.
  - 7.2. If *cap*.KeystoreCapabilities.MaximumNumberOfKeys <= 0 or skipped, FAIL the test.
- 8. If cap.KeystoreCapabilities.PKCS8RSAKeyPairUpload = true:
  - 8.1. If *cap*.KeystoreCapabilities.MaximumNumberOfPassphrases < 1 or skipped, FAIL the test.
  - 8.2. If cap.KeystoreCapabilities.MaximumNumberOfKeys < 1 or skipped, FAIL the test.
  - 8.3. If *cap*.KeystoreCapabilities.RSAKeyLenghts is empty or skipped, FAIL the test.
  - 8.4. If *cap*.KeystoreCapabilities.PasswordBasedEncryptionAlgorithms is empty or skipped, FAIL the test.
  - 8.5. If *cap*.KeystoreCapabilities.PasswordBasedEncryptionAlgorithms does not contain "pbeWithSHAAnd3-KeyTripleDES-CBC" item, FAIL the test.
- 9. If *cap*.KeystoreCapabilities.PKCS12CertificateWithRSAPrivateKeyUpload = true:

  - 17.1. If *cap*.KeystoreCapabilities.MaximumNumberOfCertificationPaths <= 0 or skipped, FAIL the test.

#### **Test Result:**

## PASS -

• DUT passes all assertions.

# FAIL –

• DUT did not send GetServiceCapabilitiesResponse message.

# 5.5.2 Get Services and Get Security Configuration Service Capabilities Consistency

# Test Case ID: ADVANCED\_SECURITY-5-1-2

**Specification Coverage:** Capability exchange (ONVIF Core Specification), Capabilities (ONVIF Security Configuration Service Specification)

Feature under test: GetServices, GetServiceCapabilities (for Security Configuration Service)

Ͻηνιϝ·

WSDL Reference: devicemgmt.wsdl, security.wsdl

Test Purpose: To verify Get Services and Security Configuration Service Capabilities consistency.

Pre-Requisite: None.

Test Configuration: ONVIF Client and DUT

## **Test Procedure:**

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client invokes GetServices.
  - IncludeCapability =: true
- 4. The DUT responds with a GetServiceCapabilitiesResponse message with parameters
  - Services list =: servicesList
- 5. ONVIF Client selects Service with Service.Namespace = "http://www.onvif.org/ver10/ advancedsecurity/wsdl":
  - Services list [Namespace = "http://www.onvif.org/ver10/advancedsecurity/wsdl"] =: securityConfigurationService
- 6. ONVIF Client invokes GetServiceCapabilities.
- 7. The DUT responds with a GetServiceCapabilitiesResponse message with parameters
  - Capabilities =: *cap*
- 8. If cap differs from securityConfigurationService.Capabilities.Capabilities, FAIL the test.

## **Test Result:**

#### PASS -

• DUT passes all assertions.

## FAIL -

• DUT did not send GetServiceCapabilitiesResponse message.

# 5.6 Off-Device Key Generation Operations

# 5.6.1 Passphrase Management

# 5.6.1.1 Upload Passphrase

Test Case ID: ADVANCED\_SECURITY-6-1-1

Specification Coverage: Passphrase Management (ONVIF Security Configuration Service Specification)

Feature under test: UploadPassphrase (for Security Configuration Service)

WSDL Reference: security.wsdl

**Test Purpose:** To verify whether passphrases can be uploaded correctly.

Pre-Requisite: Security Configuration Service is received from the DUT. Passphrase handling is supported by the DUT as indicated by the MaximumNumberOfPassphrases > 0 capability. The DUT shall have enough free storage capacity for one additional passphrase.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client generates an encryption passphrase passphrase1 (see Annex A.24).
- 4. ONVIF Client invokes UploadPassphrase with parameters
  - Passphrase =: passphrase1
  - KeyAlias := "ONVIF\_Passphrase\_Test"
- 5. The DUT responds with a UploadPassphraseResponse message with parameters
  - PassphraseID =: passphraseID
- 6. ONVIF Client invokes GetAllPassphrases.
- 7. The DUT responds with a GetAllPassphrasesResponse message with parameters

- PassphraseAttribute list =: passphraseAttributeList
- 8. If passphraseAttributeList does not contain passphrase with PassphraseID equal to passphraseID, FAIL the test, and go to the step 10.
- 9. If passphrase with PassphraseID equal to passphraseID from passphraseAttributeList has Alias skipped or other than "ONVIF Passphrase Test", FAIL the test, and go to the step 10.
- 10. ONVIF Client deletes the passphrase (in passphraseID) by following the procedure mentioned in Annex A.23 to restore DUT configuration.

## PASS -

DUT passes all assertions.

#### FAIL -

- DUT did not send UploadPassphraseResponse message.
- DUT did not send GetAllPassphrasesResponse message.

# 5.6.1.2 Delete Passphrase

Test Case ID: ADVANCED SECURITY-6-1-2

Specification Coverage: Passphrase Management (ONVIF Security Configuration Service Specification)

Feature under test: DeletePassphrase

WSDL Reference: security.wsdl

Test Purpose: To verify that a passphrase can be deleted correctly.

Pre-Requisite: Security Configuration Service is received from the DUT. Passphrase handling is supported by the DUT as indicated by the MaximumNumberOfPassphrases > 0 capability. The DUT shall have enough free storage capacity for one additional passphrase.

# Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.

- 3. ONVIF Client generates an encryption passphrase passphrase1 (see Annex A.24).
- 4. ONVIF Client invokes UploadPassphrase with parameters
  - Passphrase =: passphrase1
  - KeyAlias := "ONVIF\_Passphrase\_Test"
- 5. The DUT responds with a UploadPassphraseResponse message with parameters
  - PassphraseID =: passphraseID
- 6. ONVIF Client invokes DeletePassphrase with parameters
  - PassphraseID =: passphraseID
- 7. The DUT responds with a **DeletePassphraseResponse** message.
- 8. ONVIF Client invokes GetAllPassphrases.
- 9. The DUT responds with a GetAllPassphrasesResponse message with parameters
  - PassphraseAttribute list =: passphraseAttributeList
- 10. If *passphraseAttributeList* contains passphrase with PassphraseID equal to *passphraseID*, FAIL the test.

#### PASS –

• DUT passes all assertions.

#### FAIL -

- DUT did not send UploadPassphraseResponse message.
- DUT did not send GetAllPassphrasesResponse message.
- DUT did not send DeletePassphraseResponse message.

# 5.6.2 Key Management

# 5.6.2.1 Upload PKCS8 – no key pair exists

#### Test Case ID: ADVANCED\_SECURITY-6-2-1

Specification Coverage: Key Management (ONVIF Security Configuration Service Specification)

```
www.onvif.org
```

#### Feature under test: UploadKeyPairInPKCS8

#### WSDL Reference: security.wsdl

**Test Purpose:** To verify that a PKCS#8 data structure with new public key and private key can be uploaded correctly.

Pre-Requisite: Security Configuration Service is received from the DUT. RSA key pair in a PKCS#8 data structure upload is supported by the DUT as indicated by the PKCS8RSAKeyPairUpload capability. The DUT shall have enough free storage capacity for one additional RSA key pair.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client generates a PKCS#8 data structure (out keyPairInPKCS8) with new RSA key pair (pubic key (out *publicKey*) and private key (out *privateKey*)) by following the procedure mentioned in Annex A.25.
- 4. ONVIF Client invokes UploadKeyPairInPKCS8 with parameters
  - KeyPair := keyPairInPKCS8
  - Alias := "ONVIF Test"
  - EncryptionPassphraseID skipped
- 5. The DUT responds with a UploadKeyPairInPKCS8Response message with parameters
  - KeyID =: keyID
- 6. ONVIF Client invokes GetAllKeys.
- 7. The DUT responds with a GetAllKeysResponse message with parameters
  - KeyAttribute list =: keyList
- 8. If keyList does not contain KeyAttribute.KeyID =: keyID, FAIL the test, and go to the step 11.
- 9. If **KeyAttribute** from keyList with KeyAttribute.KeyID =: keyID has KeyAttribute.hasPrivateKey element that is not equal to true or missed, FAIL the test, and go to the step 11.
- 10. If KeyAttribute from *keyList* with KeyAttribute.KeyID =: *keyID* has KeyAttribute.KeyStatus value other than "ok", FAIL the test, and go to the step 11.

11. ONVIF Client deletes the RSA key pair (in keyID) by following the procedure mentioned in Annex A.1 to restore DUT configuration.

# **Test Result:**

## PASS -

· DUT passes all assertions.

# FAIL -

- DUT did not send UploadKeyPairInPKCS8Response message.
- DUT did not send GetAllKeysResponse message.

# 5.6.2.2 Upload PKCS8 – decryption fails

# Test Case ID: ADVANCED SECURITY-6-2-2

Specification Coverage: Key Management (ONVIF Security Configuration Service Specification)

Feature under test: UploadKeyPairInPKCS8

WSDL Reference: security.wsdl

Test Purpose: To verify that a DecryptionFailed fault is produced when wrong decryption passphrase is used.

Pre-Requisite: Security Configuration Service is received from the DUT. RSA key pair in a PKCS#8 data structure upload is supported by the DUT as indicated by the PKCS8RSAKeyPairUpload capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional passphrase.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client generates an encryption passphrases passphrase1 and passphrase2 (see Annex A.24)
- 4. ONVIF Client generates a PKCS#8 data structure (out keyPairInPKCS8) with new RSA key pair (pubic key (out *publicKey*) and private key (out *privateKey*)) with encryption passphrase (in *passphrase1*) by following the procedure mentioned in Annex A.28.

- 5. ONVIF Client invokes UploadPassphrase with parameters
  - Passphrase := passphrase2
  - KeyAlias := "ONVIF Passphrase Test"
- 6. The DUT responds with a UploadPassphraseResponse message with parameters
  - PassphraseID =: passphraseID
- 7. ONVIF Client invokes UploadKeyPairInPKCS8 with parameters
  - KeyPair := keyPairInPKCS8
  - Alias := "ONVIF\_Test"
  - EncryptionPassphraseID := passphraseID
- 8. The DUT returns env:Sender/ter:InvalidArgVal/ter:DecryptionFailed SOAP 1.2 fault.
- 9. ONVIF Client deletes the passphrase (in passphraseID) by following the procedure mentioned in Annex A.23 to restore DUT configuration.
- 10. If the DUT responds with an UploadKeyPairInPKCS8Response message with KeyID =: key/D, delete the RSA key pair (in key/D) by following the procedure mentioned in Annex A.1 to restore DUT configuration.

#### PASS -

• DUT passes all assertions.

#### FAIL -

- DUT did not send UploadPassphrase message.
- DUT did send UploadKeyPairInPKCS8 message.
- The DUT did not send the env:Sender/ter:InvalidArgVal/ter:DecryptionFailed SOAP 1.2 fault message.

# 5.6.3 Certificate Management

# 5.6.3.1 Upload PKCS12 - no key pair exists

Test Case ID: ADVANCED SECURITY-6-3-1

www.onvif.org

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: UploadCertificateWithPrivateKeyInPKCS12

#### WSDL Reference: security.wsdl

Test Purpose: To verify that a PKCS#12 data structure with new public key and private key can be uploaded correctly.

Pre-Requisite: Security Configuration Service is received from the DUT. Certificate along with an RSA private key in a PKCS#12 data structure upload is supported by the DUT as indicated by the PKCS12CertificateWithRSAPrivateKeyUpload capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate.

## Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a CA certificate (out CAcert) and a corresponding public key (out publicKey) in the certificate along with the corresponding private key (out privateKey) in the form of a PKCS#12 file (out PKCS12data) by following the procedure described in Annex A.30.
- 4. ONVIF Client invokes UploadCertificateWithPrivateKeyInPKCS12 with parameters
  - CertWithPrivateKey := PKCS12data
  - CertificationPathAlias := "ONVIF Certification Path Test"
  - KeyAlias := "ONVIF\_Key\_Test"
  - IgnoreAdditionalCertificates := false
  - IntegrityPassphraseID skipped
  - EncryptionPassphraseID skipped
- 5. The DUT responds with a UploadCertificateWithPrivateKeyInPKCS12Response message with parameters
  - CertificationPathID =: certPathID

- KeyID =: keyID
- 6. ONVIF Client invokes GetAllKeys.
- 7. The DUT responds with a GetAllKeysResponse message with parameters
  - KeyAttribute list =: keyList
- 8. If keyList does not contain key with KeyID equal to keyID, FAIL the test, and go to the step 19.
- 9. If key with KeyID equal to keyID from keyList has hasPrivateKey equal to false or has skipped hasPrivateKey, FAIL the test, and go to the step 19.
- 10.If key with KeyID equal to keyID from keyList has Alias skipped or other than "ONVIF Key Test", FAIL the test, and go to the step 19.
- 11. If key with KeyID equal to keyID from keyList has KeyStatus other than "ok", FAIL the test, and go to the step 19.
- 12. ONVIF Client invokes GetAllCertificationPaths.
- 13. The DUT responds with a GetAllCertificationPathsResponse message with parameters
  - CertificationPathID list =: certPathList
- 14. If certPathList does not contain certification path with CertificationPathID equal to certPathID, FAIL the test, and go to the step 19.
- 15. ONVIF Client invokes GetCertificationPath message with parameters
  - CertificationPathID =: certPathID
- 16. The DUT responds with a GetCertificationPathResponse message with parameters
  - CertificationPath.CertificateID[0] =: certID
  - CertificationPath.Alias =: CertPathAlias
- 17. If CertPathAlias Alias skipped or other than "ONVIF CertificationPath Test", FAIL the test, and go to the step 20.
- 18. If received CertificationPath contains more than one CertificateID item, FAIL the test, and go to the step 20.
- 19. ONVIF Client deletes the certification path (in *certPathID*) and RSA key pair (in *keyID*) by following the procedure mentioned in Annex A.35 to restore DUT configuration and finish the test.

20. ONVIF Client deletes the certification path (in certPathID) and related CA certificate (in certID) and RSA key pair (in keyID) by following the procedure mentioned in Annex A.5 to restore DUT configuration.

## Test Result:

## PASS -

DUT passes all assertions.

## FAIL -

- DUT did not send UploadCertificateWithPrivateKeyInPKCS12Response message.
- DUT did not send GetAllKeysResponse message.
- DUT did not send GetAllCertificationPathsResponse message.
- DUT did not send GetCertificationPathResponse message.

# 5.6.3.2 Upload PKCS12 - decryption fails

#### Test Case ID: ADVANCED SECURITY-6-3-2

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: UploadCertificateWithPrivateKeyInPKCS12

WSDL Reference: security.wsdl

Test Purpose: To verify that a DecryptionFailed fault is produced when wrong decryption passphrase is used.

Pre-Requisite: Security Configuration Service is received from the DUT. Certificate along with an RSA private key in a PKCS#12 data structure upload is supported by the DUT as indicated by the PKCS12CertificateWithRSAPrivateKeyUpload capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional passphrase.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.

- 3. ONVIF Client generates an encryption passphrases passphrase1 and passphrase2 (see Annex A.24)
- 4. ONVIF Client creates a CA certificate (out CAcert) and a corresponding public key (out publicKey) in the certificate along with the corresponding private key (out privateKey) in the form of a PKCS#12 file (out PKCS12data) encrypted with passphrase (in passphrase1) by following the procedure described in Annex A.31.
- 5. ONVIF Client invokes UploadPassphrase with parameters
  - Passphrase =: passphrase2
  - KeyAlias := "ONVIF\_Passphrase\_Test"
- 6. The DUT responds with a UploadPassphraseResponse message with parameters
  - PassphraseID =: passphraseID
- 7. ONVIF Client invokes UploadCertificateWithPrivateKeyInPKCS12 message with parameters
  - CertWithPrivateKey := PKCS12data
  - CertificationPathAlias := "ONVIF CertificationPath Test"
  - KeyAlias := "ONVIF Key Test"
  - IgnoreAdditionalCertificates := false
  - IntegrityPassphraseID skipped
  - EncryptionPassphraseID =: passphraseID
- 8. The DUT returns env:Sender\ter:InvalidArgVal\ter:DecryptionFailed SOAP 1.2 fault.
- 9. ONVIF Client deletes the passphrase (in passphraseID) by following the procedure mentioned in Annex A.23 to restore DUT configuration.
- 10.If the DUT responds with an UploadCertificateWithPrivateKeyInPKCS12Response message. (CertificationPathID =: certPathID, KeyID =: keyID), ONVIF Client deletes the certification path (in certPathID) and RSA key pair (in keyID) by following the procedure mentioned in Annex A.35 to restore DUT configuration and finish the test.

## PASS -

· DUT passes all assertions.

#### FAIL -

- DUT did not send UploadPassphrase message.
- DUT did send UploadCertificateWithPrivateKeyInPKCS12 message.
- DUT did not send env:Sender\ter:InvalidArgVal\ter:DecryptionFailed SOAP 1.2 fault.

## 5.6.3.3 Upload PKCS12 - verify key and certificate

#### Test Case ID: ADVANCED\_SECURITY-6-3-4

Specification Coverage: Certificate Management (ONVIF Security Configuration Service Specification)

Feature under test: UploadCertificateWithPrivateKeyInPKCS12, GetKeyStatus, GetCertificate, GetAllCertificates

#### WSDL Reference: security.wsdl

Test Purpose: Verify that the DUT correctly integrates keys and certificates, which have been uploaded in a PKCS#12 data structure, into the keystore.

Pre-Requisite: Security Configuration Service is received from the DUT. Certificate along with an RSA private key in a PKCS#12 data structure upload is supported by the DUT as indicated by the PKCS12CertificateWithRSAPrivateKeyUpload capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional certification path.

#### Test Configuration: ONVIF Client and DUT

#### **Test Procedure:**

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a CA certificate (out CAcert) and a corresponding public key (out publicKey) in the certificate along with the corresponding private key (out privateKey) in the form of a PKCS#12 file (out PKCS12data) by following the procedure described in Annex A.30.
- 4. ONVIF Client invokes UploadCertificateWithPrivateKeyInPKCS12 with parameters
  - CertWithPrivateKey := PKCS12data

www.onvif.org

- CertificationPathAlias := "ONVIF\_Certification\_Path\_Test"
- KeyAlias := "ONVIF\_Key\_Test"
- IgnoreAdditionalCertificates := false
- IntegrityPassphraseID skipped
- EncryptionPassphraseID skipped
- 5. The DUT responds with a **UploadCertificateWithPrivateKeyInPKCS12Response** message with parameters
  - CertificationPathID =: certPathID
  - KeyID =: keyID
- 6. ONVIF Client invokes GetKeyStatus with parameters
  - KeyID := keyID
- 7. The DUT responds with GetKeyStatusResponse message with parameters
  - KeyStatus =: keyStatus
- 8. If *keyStatus* is not equal to "ok", FAIL the test, and go to the step 23.
- 9. ONVIF Client invokes GetCertificationPath message with parameters
  - CertificationPathID =: certPathID
- 10. The DUT responds with a GetCertificationPathResponse message with parameters
  - CertificationPath.CertificateID list =: certIDList
  - CertificationPath.Alias
- 11. If *certIDList* contains more item than one, FAIL the test and go to the step 23.
- 12. ONVIF Client invokes GetAllCertificates.
- 13. The DUT responds with a **GetAllCertificatesResponse** message with parameters
  - CertificateID list =: certificateList
- 14. If *certificateList* does not contain certificate with Certificate.CertificateID equal to *certIDList*[0], FAIL the test and go to the step 23.

15. Set:

- certificateList.Certificate[CertificateID = certIDList[0]] =: X509Cert
- 16. If X509Cert.KeyID is not equal to keyID, FAIL the test and go to the step 23.
- 17. If X509Cert.CertificateContent is not equal to CAcert, FAIL the test and go to the step 23.
- 18. ONVIF Client invokes GetCertificate message with parameters
  - CertificateID := certIDList[0]
- 19. The DUT responds with a GetCertificateResponse message with parameters
  - Certificate =: X509Cert
- 20. If X509Cert.CertificateID is not equal to certIDList[0], FAIL the test and go to the step 23.
- 21. If X509Cert.KeyID is not equal to keyID, FAIL the test and go to the step 23.
- 22. If X509Cert.CertificateContent is not equal to CAcert, FAIL the test and go to the step 23.
- 23. ONVIF Client deletes the certification path (in certPathID) and RSA key pair (in keyID) by following the procedure mentioned in Annex A.35 to restore DUT configuration and skip other steps.

#### **Test Result:**

#### PASS -

• DUT passes all assertions.

#### FAIL -

- DUT did not send UploadCertificateWithPrivateKeyInPKCS12Response message.
- DUT did not send GetKeyStatusResponse message.
- DUT did not send GetCertificationPathResponse message.
- DUT did not send GetAllCertificatesResponse message.
- DUT did not send GetCertificateResponse message.

## 5.7 Certificate-based Client Authentication

## 5.7.1 Upload CRL

Test Case ID: ADVANCED\_SECURITY-8-1-1

www.onvif.org

Specification Coverage: CRL Management (ONVIF Security Configuration Service Specification)

Feature under test: UploadCRL, GetAllCRLs

WSDL Reference: security.wsdl

Test Purpose: Verify that CRLs can be uploaded to the DUT.

**Pre-Requisite:** Security Configuration Service is received from the DUT. CRLs supported by the DUT as indicated by the MaximumNumberOfCRLs capability. The DUT shall have enough free storage capacity for one additional CRL.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a CRL (out crl) by following the procedure mentioned in Annex A.37.
- 4. ONVIF Client invokes UploadCRL with parameter
  - Crl =: *crl*
  - Alias := "ONVIF\_CRL\_Test"
  - · anyParameters skipped
- 5. The DUT responds with a UploadCRLResponse message with parameters
  - CrIID =: *crIID*
- 6. ONVIF Client invokes GetAIICRLs
- 7. The DUT responds with a GetAllCRLsResponse message with parameters
  - CrIID list =: crlList
- 8. If *crlList* does not contain *crlID*, FAIL the test, and go to the step 11.
- 9. If *crlList*[CRLID = *crlID*].Alias is not equal to "ONVIF\_CRL\_Test", FAIL the test, and go to the step 11.
- 10. If *crlList*[CRLID = *crlID*].CRLContent is not equal to *crl*, FAIL the test, and go to the step 11.
- 11. ONVIF Client deletes the CRL (in *crIID*) by following the procedure mentioned in Annex A.38 to restore DUT configuration.

#### **Test Result:**

#### PASS -

DUT passes all assertions.

#### FAIL -

- DUT did not send UploadCRLResponse message.
- DUT did not send GetAllCRLsResponse message.

## 5.7.2 Delete CRL

Test Case ID: ADVANCED\_SECURITY-8-1-2

Specification Coverage: CRL Management (ONVIF Security Configuration Service Specification)

Feature under test: DeleteCRL, GetAllCRLs

WSDL Reference: security.wsdl

Test Purpose: Verify that CRLs can be deleted from the DUT.

Pre-Requisite: Security Configuration Service is received from the DUT. CRLs supported by the DUT as indicated by the MaximumNumberOfCRLs capability. The DUT shall have enough free storage capacity for one additional CRL.

#### Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a CRL (out crl) by following the procedure mentioned in Annex A.37.
- 4. ONVIF Client uploads a CRL (in crl) with alias (in "ONVIF CRL Test") identifier (out crlID) by following the procedure described in Annex A.39.
- 5. ONVIF Client invokes DeleteCRL with parameters
  - CrIID =: crIID
- 6. The DUT responds with a **DeleteCRLResponse** message.
- 7. ONVIF Client invokes GetAlICRLs

#### 8. The DUT responds with a GetAIICRLsResponse message with parameters

- CrIID list =: crlList
- 9. If crlList contains crlID, FAIL the test

#### Test Result:

#### PASS -

DUT passes all assertions.

#### FAIL -

- DUT did not send DeleteCRLResponse message.
- DUT did not send GetAllCRLsResponse message.

## 5.7.3 Get CRL

Test Case ID: ADVANCED\_SECURITY-8-1-3

Specification Coverage: CRL Management (ONVIF Security Configuration Service Specification)

Feature under test: GetCRL

WSDL Reference: security.wsdl

Test Purpose: Verify that CRLs can be retrieved from the DUT.

**Pre-Requisite:** Security Configuration Service is received from the DUT. CRLs supported by the DUT as indicated by the MaximumNumberOfCRLs capability. The DUT shall have enough free storage capacity for one additional CRL.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates a CRL (out crl) by following the procedure mentioned in Annex A.37.
- 4. ONVIF Client uploads a CRL (in *crl*) with alias (in "ONVIF\_CRL\_Test") identifier (out *crlID*) by following the procedure described in Annex A.39.
- 5. ONVIF Client invokes GetCRL with parameters

- CrIID =: crIID
- 6. The DUT responds with a GetCRLResponse message with parameters
  - Crl =: *crl*
- 7. If crl.CRLID is not equal to crlID, FAIL the test, and go to the step 10.
- 8. If crl.Alias is not equal to "ONVIF\_CRL\_Test", FAIL the test, and go to the step 10.
- 9. If crl.CRLContent is not equal to crl, FAIL the test, and go to the step 10.
- 10. ONVIF Client deletes the CRL (in *crIID*) by following the procedure mentioned in Annex A.38 to restore DUT configuration.

#### **Test Result:**

#### PASS -

DUT passes all assertions.

#### FAIL -

DUT did not send GetCRLResponse message.

## 5.7.4 Create certification path validation policy

Test Case ID: ADVANCED SECURITY-8-1-4

Specification Coverage: Certification Path Validation Policy Management (ONVIF Security Configuration Service Specification)

Feature under test: CreateCertPathValidationPolicy, GetAllCertPathValidationPolicies

WSDL Reference: security.wsdl

**Test Purpose:** Verify that a certification path validation policy can be created on the DUT.

**Pre-Requisite:** Security Configuration Service received from the DUT. is Certification path validation policy supported by the DUT as indicated by the MaximumNumberOfCertificationPathValidationPolicies capability. The DUT shall have enough free storage capacity for one additional certification path validation policy. The DUT shall have enough free storage capacity for one additional certification path. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate.

#### Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client prepares certificate (out certID), related RSA key pair (out keyID) and certification path if any (out certificationPathID) by following the procedure mentioned in Annex A.41.
- 4. ONVIF Client invokes CreateCertPathValidationPolicy with parameter
  - Alias := "ONVIF\_CertPathValidationPolicy\_Test"
  - Parameters.RequireTLSWWWClientAuthExtendedKeyUsage skipped
  - Parameters.UseDeltaCRLs = true
  - Parameters.anyParameters skipped
  - TrustAnchor[0].CertificateID := certID
  - anyParameters skipped
- 5. The DUT responds with CreateCertPathValidationPolicyResponse message with parameters
  - CertPathValidationPolicyID =: certPathValidationPolicyID
- 6. ONVIF Client invokes GetAllCertPathValidationPolicies.
- 7. The DUT responds with a GetAllCertPathValidationPoliciesResponse message with parameters
  - CertPathValidationPolicy list =: certPathValidationPolicyList
- 8. If certPathValidationPolicyList does not contain certPathValidationPolicyID, FAIL the test, and go to the step 13.
- 9. If certPathValidationPolicyList[CertPathValidationPolicyID certPathValidationPolicyID]. Alias is not equal to "ONVIF CertPathValidationPolicy Test", FAIL the test, and go to the step 13.
- 10. lf certPathValidationPolicyList[CertPathValidationPolicyID = certPathValidationPolicyID].Parameters.RequireTLSWWWClientAuthExtendedKeyUsage is equal to true, FAIL the test, and go to the step 13.

- 11. lf certPathValidationPolicyList[CertPathValidationPolicyID = certPathValidationPolicyID].Parameters.UseDeltaCRLs is not equal to true, FAIL the test, and go to the step 13.
- 12.If certPathValidationPolicyList[CertPathValidationPolicyID = certPathValidationPolicyID]. TrustAnchor does not contain one and only one element with CertificateID equal to certID, FAIL the test, and go to the step 13.
- 13. ONVIF Client deletes the certification path validation policy (in certPathValidationPolicyID) by following the procedure mentioned in Annex A.40 to restore DUT configuration.
- 14. If *certificationPathID* is null:
  - 14.1. ONVIF Client deletes the self-signed certificate (in certID) and related the RSA key pair (in keyID) by following the procedure mentioned in Annex A.9.
  - 14.2. Skip other steps.
- 15. If certificationPathID is not null:
  - 15.1. ONVIF Client deletes the certification path (in certificationPathID) and RSA key pair (in keyID) by following the procedure mentioned in Annex A.35 to restore DUT configuration.

#### **Test Result:**

#### PASS -

• DUT passes all assertions.

#### FAIL -

- DUT did not send CreateCertPathValidationPolicyResponse message.
- DUT did not send GetAllCertPathValidationPoliciesResponse message.

## 5.7.5 Get certification path validation policy

#### Test Case ID: ADVANCED SECURITY-8-1-5

Specification Coverage: Certification Path Validation Policy Management (ONVIF Security Configuration Service Specification)

Feature under test: CreateCertPathValidationPolicy, GetCertPathValidationPolicy

WSDL Reference: security.wsdl

www.onvif.org

Test Purpose: Verify that certification path validation policies can be retrieved from the DUT.

**Pre-Requisite:** Security Configuration Service is received from the DUT. Certification path validation policy supported by the DUT as indicated by the MaximumNumberOfCertificationPathValidationPolicies capability. The DUT shall have enough free storage capacity for one additional certification path validation policy. The DUT shall have enough free storage capacity for one additional certification path. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates certification path validation policy identifier (out *certPathValidationPolicyID*) with specified alias (in "Test CertPathValidationPolicy Alias"), related certificate (out *certID*), RSA key pair (out *keyID*) and certification path if any (out *certificationPathID*) by following the procedure mentioned in Annex A.42.
- 4. ONVIF Client invokes GetCertPathValidationPolicy with parameters
  - CertPathValidationPolicyID =: certPathValidationPolicyID
- 5. The DUT responds with a **GetCertPathValidationPolicyResponse** message with parameters
  - CertPathValidationPolicy =: certPathValidationPolicy
- 6. If *certPathValidationPolicy*.CertPathValidationPolicyID is not equal to *certPathValidationPolicyID*, FAIL the test, and go to the step 11.
- 7. If *certPathValidationPolicy*.Alias is not equal to "Test CertPathValidationPolicy Alias", FAIL the test, and go to the step 11.
- 8. If *certPathValidationPolicy*.Parameters.RequireTLSWWWClientAuthExtendedKeyUsage is equal to true, FAIL the test, and go to the step 11.
- 9. If *certPathValidationPolicy*.Parameters.UseDeltaCRLs is not equal to true, FAIL the test, and go to the step 11.
- 10. If *certPathValidationPolicy*.TrustAnchor does not contain one and only one element with CertificateID equal to *certID*, FAIL the test, and go to the step 11.

- 11. ONVIF Client deletes the certification path validation policy (in *certPathValidationPolicyID*) by following the procedure mentioned in Annex A.40 to restore DUT configuration.
- 12. If *certificationPathID* is null:
  - 12.1. ONVIF Client deletes the self-signed certificate (in *certID*) and related the RSA key pair (in *keyID*) by following the procedure mentioned in Annex A.9.
  - 12.2. Skip other steps.
- 13. If *certificationPathID* is not null:
  - 13.1. ONVIF Client deletes the certification path (in *certificationPathID*) and RSA key pair (in *keyID*) by following the procedure mentioned in Annex A.35 to restore DUT configuration.

#### **Test Result:**

#### PASS -

• DUT passes all assertions.

#### FAIL -

• DUT did not send GetCertPathValidationPolicyResponse message.

## 5.7.6 Delete certification path validation policy

#### Test Case ID: ADVANCED\_SECURITY-8-1-6

**Specification Coverage:** Certification Path Validation Policy Management (ONVIF Security Configuration Service Specification)

Feature under test: DeleteCertPathValidationPolicy, GetAllCertPathValidationPolicies

WSDL Reference: security.wsdl

**Test Purpose:** Verify that a certification path validation policy can be deleted from DUT.

**Pre-Requisite:** Security Configuration Service received from the DUT. is the DUT as Certification path validation policy supported by indicated by the MaximumNumberOfCertificationPathValidationPolicies capability. The DUT shall have enough free storage capacity for one additional certification path validation policy. The DUT shall have enough free storage capacity for one additional certification path. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate.

#### Test Configuration: ONVIF Client and DUT

#### **Test Procedure:**

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client creates certification path validation policy identifier (out certPathValidationPolicyID) with specified alias (in "Test CertPathValidationPolicy Alias"), related certificate (out certID), RSA key pair (out keyID) and certification path if any (out certificationPathID) by following the procedure mentioned in Annex A.42.
- 4. ONVIF Client invokes DeleteCertPathValidationPolicy with parameters
  - CertPathValidationPolicyID =: certPathValidationPolicyID
- 5. The DUT responds with a **DeleteCertPathValidationPolicyResponse** message.
- 6. ONVIF Client invokes GetAllCertPathValidationPolicies.
- 7. The DUT responds with a GetAllCertPathValidationPoliciesResponse message with parameters
  - CertPathValidationPolicy list =: certPathValidationPolicyList
- 8. If certPathValidationPolicyList contains certPathValidationPolicyID, FAIL the test, and go to the step 9.
- 9. If *certificationPathID* is null:
  - 9.1. ONVIF Client deletes the self-signed certificate (in certID) and related the RSA key pair (in *keyID*) by following the procedure mentioned in Annex A.9.
  - 9.2. Skip other steps.
- 10. If *certificationPathID* is not null:
  - 10.1. ONVIF Client deletes the certification path (in certificationPathID) and RSA key pair (in keyID) by following the procedure mentioned in Annex A.35 to restore DUT configuration.

#### Test Result:

#### PASS -

· DUT passes all assertions.

www.onvif.org

#### FAIL -

- DUT did not send DeleteCertPathValidationPolicyResponse message.
- DUT did not send GetAllCertPathValidationPoliciesResponse.

## 5.8 TLS Versions

## 5.8.1 TLS Version Management

#### Test Case ID: ADVANCED SECURITY-9-1-1

Specification Coverage: SetEnabledTLSVersions (ONVIF Security Configuration Service Specification), GetEnabledTLSVersions (ONVIF Security Configuration Service Specification)

Feature under test: SetEnabledTLSVersions, GetServiceCapabilities (Security Configuration), GetEnabledTLSVersions

#### WSDL Reference: security.wsdl

Test Purpose: Verify that TLS Versions settings could be changes by SetEnabledTLSVersions request and recieved by GetEnabledTLSVersions request. Verify that TLS Versions settings are consistant with capabilities.

Pre-Requisite: Security Configuration Service is received from the DUT. Enabling and disabling specific TLS versions supported by the DUT as indicated by the EnabledVersionsSupported capability.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client retrieves Security Configuration Service Capabilities by following the procedure mentioned in Annex A.10 with the following input and output parameters
  - out cap Security Configuration Service Capabilities
- 4. ONVIF Client invokes GetEnabledTLSVersions request.
- 5. The DUT responds with GetEnabledTLSVersionsResponse message with parameters

- Versions list =: initialVersionList
- 6. If initialVersionList does not contains any items, FAIL the test, restore the DUT state, and skip other steps.
- 7. If cap.TLSServerCapabilities.TLSServerSupported does not contains all items from *initialVersionList* list, FAIL the test, restore the DUT state, and skip other steps.
- 8. ONVIF Client invokes SetEnabledTLSVersions request with parameters
  - Versions list := cap.TLSServerCapabilities.TLSServerSupported
- 9. The DUT responds with **SetEnabledTLSVersionsResponse** message.
- 10. ONVIF Client invokes GetEnabledTLSVersions request.
- 11. The DUT responds with GetEnabledTLSVersionsResponse message with parameters
  - Versions list =: updatedVersionList1
- 12. If updatedVersionList1 is not equal to cap.TLSServerCapabilities.TLSServerSupported list (the order of the items shall be ignored during comparition), FAIL the test, restore the DUT state, and skip other steps.
- 13. ONVIF Client invokes SetEnabledTLSVersions request with parameters
  - Versions list := empty list
- 14. The DUT returns env:Sender/ter:InvalidArgVal/ter:EmptyList SOAP 1.2 fault.
- 15. ONVIF Client invokes GetEnabledTLSVersions request.
- 16. The DUT responds with **GetEnabledTLSVersionsResponse** message with parameters
  - Versions list =: updatedVersionList2
- 17. If updatedVersionList2 is not equal to cap.TLSServerCapabilities.TLSServerSupported list (the order of the items shall be ignored during comparition), FAIL the test, restore the DUT state, and skip other steps.
- 18. If cap.TLSServerCapabilities.TLSServerSupported list contains more than one item:
  - 18.1. ONVIF Client invokes SetEnabledTLSVersions request with parameters
    - Versions list := first item from cap.TLSServerCapabilities.TLSServerSupported list
  - 18.2. The DUT responds with SetEnabledTLSVersionsResponse message.

#### 18.3. ONVIF Client invokes GetEnabledTLSVersions request.

- 18.4. The DUT responds with GetEnabledTLSVersionsResponse message with parameters
  - Versions list =: updatedVersionList3
- 18.5. If updatedVersionList3 contains more than one item, FAIL the test, restore the DUT state, and skip other steps.
- 18.6. If updatedVersionList3 does not contain first item from cap.TLSServerCapabilities.TLSServerSupported list, FAIL the test, restore the DUT state, and skip other steps.
- 18.7. ONVIF Client invokes SetEnabledTLSVersions request with parameters
  - Versions list := last item from cap.TLSServerCapabilities.TLSServerSupported list
- 18.8. The DUT responds with SetEnabledTLSVersionsResponse message.
- 18.9. ONVIF Client invokes GetEnabledTLSVersions request.
- 18.10. The DUT responds with GetEnabledTLSVersionsResponse message with parameters
  - Versions list =: updatedVersionList4
- 18.11. If updated VersionList4 contains more than one item, FAIL the test, restore the DUT state, and skip other steps.
- does 18.12. lf updatedVersionList4 contain not last item from cap.TLSServerCapabilities.TLSServerSupported list, FAIL the test, restore the DUT state, and skip other steps.
- 19. Restore the DUT state.

#### **Test Result:**

#### PASS -

DUT passes all assertions.

#### FAIL -

- DUT did not send GetEnabledTLSVersionsResponse message at steps 9, 17.2, 17.8.
- DUT did not send SetEnabledTLSVersionsResponse message.

 DUT did not send the env:Sender/ter:InvalidArgVal/ter:EmptyList SOAP 1.2 fault message at step 14.

## 5.8.2 Disable TLS Version

Test Case ID: ADVANCED SECURITY-9-1-2

Specification Coverage: SetEnabledTLSVersions (ONVIF Security Configuration Service Specification), GetEnabledTLSVersions (ONVIF Security Configuration Service Specification)

Feature under test: SetEnabledTLSVersions, GetEnabledTLSVersions

WSDL Reference: security.wsdl

Test Purpose: Verify that TLS Versions settings were applied.

Pre-Requisite: Security Configuration Service is received from the DUT. CRLs supported by the DUT as indicated by the MaximumNumberOfCRLs capability. Network Configuration is supported by the DUT.

Test Configuration: ONVIF Client and DUT

- 1. Start an ONVIF Client.
- 2. Start the DUT.
- 3. ONVIF Client retrieves Security Configuration Service Capabilities by following the procedure mentioned in Annex A.10 with the following input and output parameters
  - out cap Security Configuration Service Capabilities
- 4. If cap.TLSServerCapabilities.TLSServerSupported contains only one item, skip other steps.
- 5. ONVIF Client configures HTTPS if required by following the procedure mentioned in Annex A.49.
- 6. ONVIF Client invokes SetEnabledTLSVersions request with parameters
  - Versions list := all items from cap.TLSServerCapabilities.TLSServerSupported list except lowest version
- 7. The DUT responds with SetEnabledTLSVersionsResponse message.
- 8. ONVIF Client verifies basic TLS handshake by following the procedure mentioned in Annex A.52 with the following input and output parameters.

- in lowest version from *cap*.TLSServerCapabilities.TLSServerSupported list disabled TLS version
- 9. ONVIF Client verifies basic TLS handshake by following the procedure mentioned in Annex A.21.
- 10. Restore the DUT state.

#### **Test Result:**

#### PASS -

• DUT passes all assertions.

#### FAIL –

• DUT did not send SetEnabledTLSVersionsResponse message.

## **Annex A Helper Procedures and Additional Notes**

## A.1 Delete an RSA key pair

Name:HelperDeleteRSAKeyPair

Procedure Purpose: Helper procedure to delete an RSA key pair.

Pre-requisite: Security Configuration Service is received from the DUT. On-board RSA key pair generation is supported by the DUT as indicated by the RSAKeyPairGeneration capability.

**Input:** The identifier of the key pair (*keyID*) to delete.

#### Returns: None

#### **Procedure:**

- 1. ONVIF Client invokes DeleteKey with parameters
  - KeyID := keyID
- 2. DUT responds with a **DeleteKeyResponse** message.

#### **Procedure Result:**

#### PASS -

· DUT passes all assertions.

#### FAIL -

• DUT did not send DeleteKeyResponse message.

## A.2 Subject for a server certificate

Use the following subject for test cases:

- Subject.Country := "US"
- Subject.CommonName := <DUT IP-address>

## A.3 Creating a certificate from a PCKS#10 request

Name: HelperCreateCertificateFromPKCS10CSR

Procedure Purpose: Helper procedure to create an X.509 certificate from a PKCS#10 certification request.

#### Pre-requisite: None.

Input: PKCS#10 request (pkcs10) and associated CA certificate (CAcert) and a corresponding private key (privateKey).

Returns: An [RFC 5280] compliant X.509 certificate (certResult) from the PKCS#10 request signed with the public key in the CA certificate.

#### **Procedure:**

- 1. Create an [RFC 5280] compliant X.509 certificate (certResult) from the PKCS#10 request (pkcs10) with the following properties:
  - version:= v3
  - signature := sha1-WithRSAEncryption
  - subject := subject from the PKCS#10 request (pkcs10)
  - subject public key := subject public key in the PKCS#10 request (pkcs10)
  - validity := not before 19700101000000Z and not after 99991231235959Z
  - certificate signature is generated with the private key (privateKey) in the CA certificate (CAcert)
  - certificate extensions := the X.509v3 extensions from the PKCS#10 request (pkcs10)

## A.4 Provide CA certificate

#### Name: HelperCreateCACertificate

Procedure Purpose: Helper procedure to create an X.509 CA certificate.

#### Pre-requisite: None.

Input: The subject (subject) of certificate (optional input parameter, could be skipped).

Returns: An X.509 CA certificate (CAcert) that is compliant to [RFC 5280] and a corresponding private key (privateKey) and public key (publicKey).

#### **Procedure:**

- 1. ONVIF Client determines the length of the key to generate (out length) by following the procedure mentioned in Annex A.6.
- 2. If subject is skipped set:

- subject := "CN=ONVIF TT,C=US"
- 3. ONVIF Client creates an X.509 self-signed CA certificate that is compliant to [RFC 5280] and has the following properties:
  - version := v3
  - signature := sha1-WithRSAEncryption
  - validity := not before 19700101000000Z and not after 99991231235959Z
  - subject := subject
  - length of the key to be used := length

Note: ONVIF Client may return the same CA certificate in subsequent invocations of this procedure for the same subject.

## A.5 Delete a certification path with corresponding certificate and RSA key pair

Name: HelperDeleteCertificationPath

Procedure Purpose: Helper procedure to delete certification path and related certificate and RSA key pair.

Pre-requisite: Security Configuration Service is received from the DUT. Create self-signed certificate by the DUT as indicated by the SelfSignedCertificateCreationWithRSA or PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSAcapability. TLS is supported by the DUT as indicated by the TLSServerSupported capability.

Input: The identifier of the certification path (certPathID), certificate (certID) and RSA key pair (keyID) to delete.

#### Returns: None

#### **Procedure:**

- 1. ONVIF Client invokes DeleteCertificationPath request with parameters
  - CertificationPathID := certPathID
- 2. The DUT responds with a DeleteCertificationPathResponse message.
- 3. ONVIF Client deletes the self-signed certificate (in certID) and related the RSA key pair (in keyID) by following the procedure mentioned in Annex A.9.

#### PASS -

· DUT passes all assertions.

#### FAIL -

• DUT did not send DeleteCertificationPathResponse message.

## A.6 Determine RSA key length

Name: HelperDetermineRSAKeyLength

**Procedure Purpose:** Helper procedure to determine the RSA key length to use during testing.

Pre-requisite: Security Configuration Service is received from the DUT. On-board RSA key pair generation is supported by the DUT as indicated by the RSAKeyPairGeneration capability.

#### Input: None

Returns: The smallest supported RSA key length (keyLength).

#### **Procedure:**

- 1. ONVIF Client gets the service capabilities (out cap) by the following the procedure mentioned in Annex A.10.
- 2. ONVIF Client loops through the supported Key length list (*cap*.RSAKeyLengths) and selects the smallest supported key length (keyLength).

#### **Procedure Result:**

#### PASS -

· DUT passes all assertions.

#### FAIL -

• No supported key length was found at step 2.

## A.7 Create an RSA key pair

Name: HelperCreateRSAKeyPair

Procedure Purpose: Helper procedure to create an RSA key pair

Pre-requisite: Security Configuration Service is received from the DUT. On-board RSA key pair generation is supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair.

#### Input: None

**Returns:** The identifier of the new key pair (*keyID*).

#### **Procedure:**

- 1. ONVIF Client determines the length of the key to generate (out *length*) by following the procedure mentioned in Annex A.6.
- 2. ONVIF Client invokes CreateRSAKeyPair with parameter
  - KeyLength := *length*
- 3. The DUT responds with CreateRSAKeyPairResponse message with parameters
  - KeyID =: keyID
  - EstimatedCreationTime =: duration
- 4. Until operationDelay + duration expires repeat the following steps:
  - 4.1. ONVIF Client waits for 5 seconds.
  - 4.2. ONVIF Client invokes GetKeyStatus with parameters
    - KeyID := keyID
  - 4.3. The DUT responds with GetKeyStatusResponse message with parameters
    - KeyStatus =: keyStatus
  - 4.4. If keyStatus is equal to "ok", keyID will be return as a result of the procedure, other steps will be skipped.
  - 4.5. If keyStatus is equal to "corrupt", FAIL the procedure and deletes the RSA key pair (keyID) by following the procedure mentioned in Annex A.1.
- 5. If operationDelay + duration expires for step 4 and the last keyStatus is other than "ok", FAIL the procedure and deletes the RSA key pair (key/D) by following the procedure mentioned in Annex A.1.

#### **Procedure Result:**

PASS -

DUT passes all assertions.

#### FAIL -

- DUT did not send CreateRSAKeyPairResponse message.
- DUT did not send GetKeyStatusResponse message(s).

Note: operationDelay will be taken from Operation Delay field of ONVIF Device Test Tool.

## A.8 Create a self-signed certificate

Name: HelperCreateSelfSignedCertificate

Procedure Purpose: Helper procedure to create a self-signed certificate.

Pre-requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate.

#### Input: None

Returns: The identifier of the new certificate (certID) and RSA key pair (keyID).

#### **Procedure:**

- 1. ONVIF Client creates an RSA key pair (out keyID) by following the procedure mentioned in Annex A.7.
- 2. ONVIF Client invokes CreateSelfSignedCertificate with parameters
  - X509Version skipped
  - KeyID := keyID
  - Subject := subject (see Annex A.2)
  - · Alias skipped
  - notValidBefore skipped
  - notValidAfter skipped
  - SignatureAlgorithm.algorithm := 1.2.840.113549.1.1.5 (OID of SHA-1 with RSA Encryption algorithm)

- SignatureAlgorithm.parameters skipped
- SignatureAlgorithm.anyParameters skipped
- · Extension skipped
- 3. The DUT responds with CreateSelfSignedCertificateResponse message with parameters
  - CertificateID =: certID

#### PASS -

DUT passes all assertions.

#### FAIL -

• DUT did not send CreateSelfSignedCertificateResponse message.

## A.9 Delete a certificate with corresponding RSA key pair

Name: HelperDeleteCertWithKey

Procedure Purpose: Helper procedure to delete a certificate and related RSA key pair.

Pre-requisite: Security Configuration Service is received from the DUT. Create self-signed certificate by the DUT as indicated by the SelfSignedCertificateCreationWithRSA or PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSAcapability.

**Input:** The identifier of the certificate (*certID*) and RSA key pair (*keyID*) to delete.

#### Returns: None

#### **Procedure:**

- 1. ONVIF Client invokes DeleteCertificate with parameters
  - CertificateID := certID
- 2. The DUT responds with **DeleteCertificateResponse** message.
- 3. ONVIF Client deletes the RSA key pair (in keyID) by following the procedure mentioned in Annex A.1.

#### **Procedure Result:**

#### PASS -

DUT passes all assertions.

#### FAIL -

• DUT did not send DeleteCertificateResponse message.

## A.10 Get service capabilities

Name: HelperGetServiceCapabilities

Procedure Purpose: Helper procedure to get service capabilities.

Pre-requisite: Security Configuration Service is received from the DUT.

Input: None

Returns: The service capabilities (cap).

#### **Procedure:**

- 1. ONVIF Client invokes GetServiceCapabilities
- 2. The DUT responds with GetServiceCapabilitiesResponse message with parameters
  - Capabilities =: cap

#### **Procedure Result:**

#### PASS -

· DUT passes all assertions.

#### FAIL -

DUT did not send GetServiceCapabilitiesResponse message.

## A.11 Create a certification path based on self-signed certificate

Name: HelperCreateCertificationPath SelfSigned

Procedure Purpose: Helper procedure to create a certification path based on self-signed certificate.

Pre-requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional certification path.

#### Input: None

**Returns:** The identifier of the new certification path (*certPathID*), certificate (*certID*) and RSA key pair (keyID).

#### **Procedure:**

- 1. ONVIF Client creates a self-signed certificate (out certID) and related RSA key pair (out *keyID*) by following the procedure mentioned in Annex A.8.
- 2. ONVIF Client invokes CreateCertificationPath request with parameters
  - CertficateIDs.CertificateID[0] := certID
  - Alias := "ONVIF Test"
- 3. The DUT responds with CreateCertificationPathResponse message with parameters
  - CertificationPathID =: certPathID

#### **Procedure Result:**

#### PASS -

DUT passes all assertions.

#### FAIL -

DUT did not send CreateCertificationPathResponse message.

## A.12 Remove server certificate assignment with corresponding certification path, certificate and RSA key pair

#### Name: HelperRemoveServerCertificateAssignment

Procedure Purpose: Helper procedure to remove server certificate assignment with corresponding certification path, certificate and RSA key pair.

Pre-requisite: Security Configuration Service is received from the DUT. Create self-signed certificate by the DUT as indicated by the SelfSignedCertificateCreationWithRSA or PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSAcapability. TLS supported by the DUT as indicated by the TLSServerSupported capability.

Input: The identifier of certification path (certPathID), certificate (certID) and RSA key pair (keyID) to delete.

#### Returns: None

#### **Procedure:**

- 1. ONVIF Client invokes RemoveServerCertificateAssignment with parameters
  - CertificationPathID := certPathID
- 2. The DUT responds with RemoveServerCertificateAssignmentResponse message.
- 3. ONVIF Client waits for time operationDelay.
- 4. ONVIF Client deletes the certification path (in certPathID) and related certificate (in certID) and the RSA key pair (in keyID) by following the procedure mentioned in Annex A.5.

#### **Procedure Result:**

#### PASS -

· DUT passes all assertions.

#### FAIL -

DUT did not send RemoveServerCertificateAssignmentResponse message.

## A.13 Add server certificate assignment with corresponding certification path, self-signed certificate and RSA key pair

Name: HelperAddServerCertAssign\_SSCertificate

Procedure Purpose: Helper procedure to add server certificate assignment with corresponding certification path, self-signed certificate and RSA key pair.

Pre-requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional certification path.

Input: None

**Returns:** The identifiers of the new certification path (*certPathID*), certificate (*certID*) and RSA key pair (*keyID*).

#### Procedure:

- ONVIF Client creates a certification path (out *certPathID*) based on self-signed certificate (out *certID*) and related RSA key pair (out *keyID*) by following the procedure mentioned in Annex A.11.
- 2. ONVIF Client invokes AddServerCertificateAssignment with parameters
  - CertificationPathID := *certPathID*
- 3. The DUT responds with AddServerCertificateAssignmentResponse message.
- 4. ONVIF Client waits for time operationDelay.

#### **Procedure Result:**

#### PASS -

• DUT passes all assertions.

#### FAIL -

• DUT did not send AddServerCertificateAssignmentResponse message.

## A.14 Create a CA-signed certificate for RSA key pair

Name: HelperCreateCASignedCertificate

Procedure Purpose: Helper procedure to create a CA-signed certificate for RSA key pair.

**Pre-requisite:** Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair. Current time of the DUT shall be at least Jan 01, 1970.

Input: CA certificate (CAcert) and a corresponding private key (privateKey).

Returns: The identifier of the new key pair (keyID), a CA-signed certificate (cert).

#### Procedure:

1. ONVIF Client creates an RSA key pair (*keyID*) by following the procedure mentioned in Annex A.7.

#### 2. ONVIF Client invokes CreatePKCS10CSR with parameters

- Subject := *subject* (see Annex A.2)
- KeyID := keyID
- CSRAttribute skipped
- SignatureAlgorithm.algorithm := 1.2.840.113549.1.1.5 (OID of SHA-1 with RSA Encryption algorithm)
- 3. The DUT responds with CreatePKCS10CSRResponse message with parameters
  - PKCS10CSR =: PKCS10request
- 4. ONVIF Client creates a certificate (out cert) from the PKCS#10 request (in PKCS10request) and an associated CA certificate (in CAcert) with related private key (in privateKey) by following the procedure described in Annex A.3.

#### **Procedure Result:**

#### PASS -

· DUT passes all assertions.

#### FAIL -

• DUT did not send CreatePKCS10CSRResponse message.

## A.15 Upload a certificate without Private Key Assignment

Name: HelperUploadCertificate

Procedure Purpose: Helper procedure to upload a certificate without private key assignment.

Pre-requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate.

Input: Certificate (cert).

Returns: The identifier of the new RSA key pair (keyID) and a certificate identifier (certID).

#### **Procedure:**

1. ONVIF Client invokes UploadCertificate with parameters

- Certificate := cert
- Alias := "ONVIF Test"
- PrivateKeyRequired : = false
- 2. DUT responds with a UploadCertificateResponse message.
  - Certificate := certID
  - KeyID := keyID

#### PASS -

• DUT passes all assertions.

#### FAIL -

DUT did not send UploadCertificateResponse message.

## A.16 Create and upload a CA-signed certificate for private key

Name: HelperUploadCASignedCertificate

**Procedure Purpose:** Helper procedure to create and upload a CA-signed certificate for private key

Pre-requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. Current time of the DUT shall be at least Jan 01, 1970.

**Input:** CA certificate (*CAcert*) and a corresponding private key (*privateKey*).

Returns: The identifier of the new RSA key pair (keyID), a certificate identifier (certID).

#### **Procedure:**

- 1. ONVIF Client creates a certificate (out cert) from the PKCS#10 request with RSA key pair (out keyID) and associated CA certificate (in CAcert) and a corresponding private key (in privateKey) by following the procedure described in Annex A.14.
- 2. ONVIF Client invokes UploadCertificate with parameters

- Certificate := cert
- Alias := "ONVIF Test1"
- PrivateKeyRequired := true
- 3. The DUT responds with UploadCertificateResponse with parameters
  - CertificateID =: certID
  - KeyID =: keyID

#### PASS -

• DUT passes all assertions.

#### FAIL -

• DUT did not send UploadCertificateResponse message.

## A.17 Delete a certification path with corresponding two certificates and RSA key pairs

Name: HelperDeleteCertificationPath2

Procedure Purpose: Helper procedure to delete certification path and related certificates and RSA key pairs.

Pre-requisite: Security Configuration Service is received from the DUT. Create self-signed certificate by the DUT as indicated by the SelfSignedCertificateCreationWithRSA or PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSAcapability. TLS is supported by the DUT as indicated by the TLSServerSupported capability.

Input: The identifier of the certification path (certPathID), certificate (certID1) and RSA key pair (keyID1), certificate (certID2) and RSA key pair (keyID2) to delete.

#### Returns: None

#### **Procedure:**

- 1. ONVIF Client invokes DeleteCertificationPath request with parameters
  - CertificationPathID := certPathID

www.onvif.org

- 2. The DUT responds with **DeleteCertificationPathResponse** message.
- 3. ONVIF Client deletes the CA certificate (certID2) and related RSA key pair (keyID2) by following the procedure mentioned in Annex A.9.
- 4. ONVIF Client deletes the CA certificate (certID1) and related RSA key pair (keyID1) by following the procedure mentioned in Annex A.9.

#### PASS -

DUT passes all assertions.

#### FAIL -

DUT did not send DeleteCertificationPathResponse message.

## A.18 Create certification path with CA-signed certificate and associated CA certificate

Name: HelperCreateCertificationPath CACertificates

Procedure Purpose: Helper procedure to create a certification path based on CA-signed certificate and associated CA certificate.

Pre-requisite: Security Configuration Service is received from the DUT. Create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability. RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability. TLS is supported by the DUT as indicated by the TLSServerSupported capability. The DUT shall have enough free storage capacity for two additional RSA key pairs. The DUT shall have enough free storage capacity for two additional certificates. The DUT shall have enough free storage capacity for one additional certification path. Current time of the DUT shall be at least Jan 01, 1970.

#### Input: None

Returns: The identifier of the new certification path (certPathID) and two related certificates: CAsigned certificate (certID1) and related key (keyID1) and associated CA certificate (certID2) and related key (keyID2).

#### **Procedure:**

1. ONVIF Client creates a CA certificate (out CAcert) and a corresponding private key (out privateKey) by following the procedure described in Annex A.4.

- 2. ONVIF Client creates and uploads a CA-signed certificate (out certID1) for RSA key pair (out keyID1) and associated CA certificate (in CAcert) and a corresponding private key (in privateKey) by following the procedure described in Annex A.16.
- 3. ONVIF Client uploads a CA certificate (out certID2, in CAcert) and new RSA key pair with the public key from the CA certificate (out keyID2) by following the procedure described in Annex A.15.
- 4. ONVIF Client invokes CreateCertificationPath with parameters
  - CertficateIDs.CertificateID[0] =: certID1
  - CertficateIDs.CertificateID[1] =: certID2
  - Alias := "ONVIF Test2"
- 5. The DUT responds with CreateCertificationPathResponse message with parameters
  - CertificationPathID =: certPathID

#### PASS -

• DUT passes all assertions.

#### FAIL -

• DUT did not send CreateCertificationPathResponse message.

## A.19 Validate DER encoding

Name: HelperValidateDEREncoding

Procedure Purpose: Helper procedure to validate DER encoding.

Pre-requisite: None.

Input: DER encoded data (dataDER).

Returns: None.

#### **Procedure:**

- 1. ONVIF Client tries to decode DER encoded data dataDER. If decoding was failed, then dataDER is not valid encoded, FAIL the procedure and skip other steps.
- 2. ONVIF Client DER encodes the result from previous step (dataDER2).

3. ONVIF Client compares *dataDER* and *dataDER*2. If they are not equal, then dataDER is not valid encoded, FAIL the procedure.

#### **Procedure Result:**

#### PASS -

• DUT passes all assertions.

# A.20 Remove server certificate assignment with corresponding certification path, certificates and RSA key pairs

Name: HelperRemoveServerCertificateAssignment2

**Procedure Purpose:** Helper procedure to remove server certificate assignment with corresponding certification path, certificates and RSA key pairs.

**Pre-requisite:** Security Configuration Service is received from the DUT. Create self-signed certificate by the DUT as indicated by the SelfSignedCertificateCreationWithRSA or PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSAcapability. TLS is supported by the DUT as indicated by the TLSServerSupported capability.

**Input:** The identifier of certification path (*certPathID*), certificate (*certID1*) and RSA key pair (*keyID1*), certificate (*certID2*) and RSA key pair (*keyID2*) to delete.

#### Returns: None

#### **Procedure:**

- 1. ONVIF Client invokes RemoveServerCertificateAssignment with parameters
  - CertificationPathID =: certPathID
- 2. The DUT responds with RemoveServerCertificateAssignmentResponse message.
- 3. ONVIF Client waits for time operationDelay.
- 4. ONVIF Client deletes the certification path (in *certPathID*), related the CA certificate (in *certID2*) and the RSA key pair (in *keyID2*) and related the CA-signed certificate (in *certID1*) and the RSA key pair (in *keyID1*) by following the procedure mentioned in Annex A.17.

#### **Procedure Result:**

#### PASS -

• DUT passes all assertions.

#### FAIL -

DUT did not send RemoveServerCertificateAssignmentResponse message.

## A.21 Basic TLS handshake

Name: HelperBasicTLSHandshakeCheck

Procedure Purpose: Helper procedure to verify basic TLS handshake.

Pre-requisite: TLS is supported by the DUT as indicated by the TLSServerSupported capability. TLS is configured. HTTPS protocol is enabled.

Input: TLS server certification path ID (certPathID).

#### Returns: None

#### **Procedure:**

- 1. ONVIF Client invokes ClientHello with parameters
  - ClientVersion := 3,1
  - Random number := ClientRandom[32], that is 4-byte number that consists of the client's date and time plus a 28-byte randomly generated number
  - CipherSuites := list of common CipherSuites used by TLS 1.0, SSL 2.0 and 3.0
  - Compression methods list := NONE
  - <SessionID> skipped
- 2. The DUT TLS server responds with a ServerHello message with parameters
  - Version =: the highest version number supported by both sides
  - Random number =: ServerRandom[32], that is 4-byte number that consists of the client's date and time plus a 28-byte randomly generated number
  - · CipherSuite =: the strongest cipher that both the client and server support
  - Compression method =: NONE
  - Session ID =: SessionID
- 3. The DUT TLS server responds Certificate message with parameters
  - Certificate.CertificateID =: CertificateID

Certificate.KeyID =: KeyID

- 4. The DUT TLS server responds a **ServerHelloDone** message.
- 5. ONVIF Client invokes ClientKeyExchange message with parameter
  - Premaster Secret := PreMasterSecret encrypted with KeyID
- 6. ONVIF Client computes MasterSecret using ClientRandom[32], ServerRandom[32] and PreMasterSecret.
- 7. The DUT TLS server computes MasterSecret using ClientRandom[32], ServerRandom[32] and PreMasterSecret.
- 8. ONVIF Client invokes ChangeCipherSpec message.
- 9. ONVIF Client invokes encrypted Finished message, containing a hash := hash1 and MAC := MAC1 over the previous handshake messages.
- 10. The DUT TLS server decrypts the client's *Finished* message and verify the hash and MAC.
- 11. The DUT TLS server responds ChangeCipherSpec.
- 12. The DUT TLS server responds its encrypted Finished message, containing a hash =: hash2 and MAC =: MAC2 over the previous handshake messages.
- 13. If hash1 is not equal to hash2, FAIL the test.
- 14. If MAC1 is not equal to MAC2, FAIL the test.

#### **Procedure Result:**

#### PASS -

DUT passes all assertions.

#### FAIL -

- DUT did not send ServerHello message.
- DUT did not send Certificate message.
- DUT did not send ServerHelloDone message.
- DUT did not send ChangeCipherSpec message.
- · DUT did not send Finished message.

The DUT TLS server sends Alert Message.

### A.22 Provide expired CA certificate

Name: HelperCreateExpiredCACertificate

Procedure Purpose: Helper procedure to create an expired X.509 CA certificate.

Pre-requisite: None.

#### Input: None

Returns: An X.509 CA certificate (CAcert) that is compliant to [RFC 5280] and a corresponding private key (privateKey).

#### **Procedure:**

- 1. ONVIF Client determines the length of the key to generate (out *length*) by following the procedure mentioned in Annex A.6.
- 2. ONVIF Client invokes GetSystemDateAndTimeRequest.
- 3. The DUT responds with GetSystemDateAndTimeResponse with parameters
  - UTCDateTime =: DUTCurrentTime
- 4. ONVIF Client creates an X.509 self-signed CA certificate that is compliant to [RFC 5280] and has the following properties:
  - version := v3
  - signature := sha1-WithRSAEncryption
  - validity := not before 19700101000000Z and not after [DUTCurrentTime 1 day]
  - length of the key to be used := *length*

Note: ONVIF Client may return the same CA certificate in subsequent invocations of this procedure.

### A.23 Delete a passphrase

Name: HelperDeletePassphrase

**Procedure Purpose:** Helper procedure to delete a passphrase.

**Pre-requisite:** Security Configuration Service is received from the DUT. Passphrase handling is supported by the DUT as indicated by the MaximumNumberOfPassphrases > 0 capability.

Input: The identifier of the passphrase (passphraseID) to delete.

### Returns: None

### **Procedure:**

- 1. ONVIF Client invokes DeletePassphrase with parameters
  - PassphraseID := passphraseID
- 2. The DUT responds with a **DeletePassphraseResponse** message.

#### **Procedure Result:**

#### PASS -

• DUT passes all assertions.

### FAIL -

DUT did not send DeletePassphraseResponse message.

### A.24 Passphrases for test cases

Use the following passphrases for test cases (20 ASCII characters):

- passphrase1 := "Passphrase for ONVIF"
- passphrase2 := "AdditionalPassphrase"

# A.25 Creating a PKCS#8 data structure with new public key and private key without passphrase

Name: HelperCreatePKCS8WithNewKeyPair

Procedure Purpose: Helper procedure to create a PKCS#8 data structure with new public key and private key without passphrase.

#### Pre-requisite: None.

Input: None.

Returns: A [RFC 5958, RFC 5959] compliant PKCS#8 data structure (keyPairInPKCS8) with new public key (publicKey) and private key (privateKey).

- 1. ONVIF Client generates RSA key pair with public key (out *publicKey*) and private key (out privateKey) by following the procedure mentioned in Annex A.26.
- 2. ONVIF Client generates a PKCS#8 data structure (out keyPairInPKCS8) with existing pubic key (in *publicKey*) and private key (in *privateKey*) by following the procedure mentioned in Annex A.27.

### A.26 Generating an RSA key pair

Name: HelperGenerateRSAKeyPair

Procedure Purpose: Helper procedure to generate an RSA key pair.

### Pre-requisite: None.

### Input: None.

**Returns:** A [RFC 3447] compliant RSA key pair with new public key (*publicKey*) and private key (privateKey).

### **Procedure:**

- 1. ONVIF Client determines the length of the key to generate (out *length*) by following the procedure mentioned in Annex A.6.
- 2. Create an [RFC 3447] compliant RSA key pair with new public key (out publicKey) and private key (out *privateKey*) with the following properties:
  - KeyLength := *length*

# A.27 Creating a PKCS#8 data structure with existing public key and private key without passphrase

Name: HelperCreatePKCS8WithExistingKeyPair

**Procedure Purpose:** Helper procedure to create a PKCS#8 data structure with existing public key and private key without passphrase.

### Pre-requisite: None.

Input: A [RFC 3447] compliant RSA key pair with public key (publicKey) and private key (privateKey).

Returns: A [RFC 5958, RFC 5959] compliant PKCS#8 data structure (keyPairInPKCS8) for provided RSA key pair.

### **Procedure:**

- 1. Create an [RFC 5958, RFC 5959] compliant PKCS#8 data structure (keyPairInPKCS8) with the following properties:
  - PrivateKeyInfo
    - version:= v2
    - privateKeyAlgorithm := rsaEncryption
    - privateKey := privateKey
    - attributes
      - publicKey := publicKey

# A.28 Creating a PKCS#8 data structure with new public key and private key with passphrase

Name: HelperCreatePKCS8WithNewKeyPairWithPassphrase

Procedure Purpose: Helper procedure to create a PKCS#8 data structure with new public key and private key with passphrase.

Pre-requisite: None.

Input: The passphrase (passphrase) to use in encryption.

Returns: A [RFC 5958, RFC 5959] compliant PKCS#8 data structure (keyPairInPKCS8) with new public key (publicKey) and private key (privateKey).

### **Procedure:**

- 1. ONVIF Client generates RSA key pair with public key (out *publicKey*) and private key (out privateKey) by following the procedure mentioned in Annex A.26.
- 2. ONVIF Client generates a PKCS#8 data structure (out keyPairInPKCS8) with existing pubic key (in *publicKey*) and private key (in *privateKey*) with encryption passphrase (in passphrase) by following the procedure mentioned in Annex A.29.

# A.29 Creating a PKCS#8 data structure with existing public key and private key with passphrase

Name: HelperCreatePKCS8WithExistingKeyPairWithPassphrase

**Procedure Purpose:** Helper procedure to create a PKCS#8 data structure with existing public key and private key with passphrase.

### Pre-requisite: None.

**Input:** A [RFC 3447] compliant RSA key pair with public key (*publicKey*) and private key (*privateKey*). The passphrase (*passphrase*) to use in encryption.

**Returns:** A [RFC 5958, RFC 5959] compliant PKCS#8 data structure (*keyPairInPKCS8*) for provided RSA key pair.

### Procedure:

- 1. Use the current PrivateKeyInfo data:
  - PrivateKeyInfo
    - version := v2
    - privateKeyAlgorithm := rsaEncryption
    - privateKey := privateKey
    - attributes
      - publicKey := *publicKey*
- 2. Create an [RFC 5958, RFC 5959] compliant PKCS#8 data structure (*keyPairInPKCS8*) with the following properties:
  - EncryptedPrivateKeyInfo
    - encryptionAlgorithm := pbeWithSHAAnd3-KeyTripleDES-CBC
    - encryptedData := encrypted with *passphrase* PrivateKeyInfo data

# A.30 Creating a PKCS#12 data structure with new CA-signed certificate signed by new public key and private key without passphrase

Name: HelperCreatePKCS12WithNewCACert

**Procedure Purpose:** Helper procedure to create CA certificate and a corresponding public key in the certificate along with the corresponding private key in the form of a PKCS#12 file.

Pre-requisite: None.

Input: The subject (subject) of certificate (optional input parameter, could be skipped).

Returns: A [PKCS#12] compliant PKCS#12 data structure (PKCS12data) with CA certificate (CAcert) and a corresponding public key (publicKey) in the certificate along with the corresponding private key (privateKey).

### **Procedure:**

- 1. If *subject* is skipped, set:
  - subject := "CN=ONVIF TT,C=US"
- 2. ONVIF Client creates a CA certificate (out CAcert) with subject (in subject) and a corresponding public key (out *publicKey*) in the certificate along with the corresponding private key (out *privateKey*) by following the procedure described in Annex A.4.
- 3. ONVIF Client creates a CA certificate (in CAcert) and a corresponding public key (in publicKey) in the certificate along with the corresponding private key (in privateKey) in the form of a PKCS#12 file (out PKCS12data) by following the procedure described in Annex A.32.

# A.31 Creating a PKCS#12 data structure with new CA-signed certificate signed by new public key and private key with passphrase

Name: HelperCreatePKCS12WithNewCACertWithPassphrase

Procedure Purpose: Helper procedure to create CA certificate and a corresponding public key in the certificate along with the corresponding private key and encryption passphrase in the form of a PKCS#12 file.

### Pre-requisite: None.

Input: The passphrase (passphrase) to use in encryption.

Returns: A [PKCS#12] compliant PKCS#12 data structure (PKCS12data) with CA certificate (CAcert) and a corresponding public key (publicKey) in the certificate along with the corresponding private key (privateKey) encrypted with passphrase (passphrase).

### **Procedure:**

1. ONVIF Client creates a CA certificate (out CAcert) and a corresponding public key (out *publicKey*) in the certificate along with the corresponding private key (out *privateKey*) by following the procedure described in Annex A.4.

2. ONVIF Client creates a CA certificate (in CAcert) and a corresponding public key (in publicKey) in the certificate along with the corresponding private key (in privateKey) encrypted with passphrase (in passphrase) in the form of a PKCS#12 file (out PKCS12data) by following the procedure described in Annex A.33.

# A.32 Creating a PKCS#12 data structure with existing CAsigned certificate and a corresponding public key and private key without passphrase

Name: HelperCreatePKCS12WithExistingCACert

Procedure Purpose: Helper procedure to create a PKCS#12 data structure with existing CA-signed certificate and a corresponding public key and private key without passphrase.

### Pre-requisite: None.

Input: An X.509 CA certificate (CAcert) that is compliant to [RFC 5280] and a corresponding private key (privateKey) and public key (publicKey).

Returns: A [PKCS#12] compliant PKCS#12 data structure (PKCS12data).

- 1. Use the current PrivateKeyInfo data:
  - · PrivateKeyInfo
    - version := v2
    - privateKeyAlgorithm := rsaEncryption
    - privateKey := privateKey
    - publicKey := publicKey
- 2. Create an [PKCS#12] compliant PKCS#12 data structure PKCS12data) with the following properties:
  - EncryptedPrivateKeyInfo
    - PrivateKeyInfo
      - version := v3
      - authSafe

### SafeBag

- Pkcs-12-KeyBag := PrivateKeyInfo
- PKCS12AttrSet
  - friendlyName := "testAlias"
- SafeBag
  - Pkcs-12-CertBag := CAcert
  - PKCS12AttrSet
    - friendlyName := "testAlias"

# A.33 Creating a PKCS#12 data structure with existing CAsigned certificate and a corresponding public key and private key with passphrase

Name: HelperCreatePKCS12WithPassphrase

Procedure Purpose: Helper procedure to create a PKCS#12 data structure with existing CA-signed certificate and a corresponding public key and private key with passphrase.

### Pre-requisite: None.

Input: An X.509 CA certificate (CAcert) that is compliant to [RFC 5280] and a corresponding private key (privateKey) and public key (publicKey), and passphrase (passphrase).

Returns: A [PKCS#12] compliant PKCS#12 data structure (PKCS12data).

- 1. Use the current PrivateKeyInfo data:
  - PrivateKeyInfo
    - version := v2
    - privateKeyAlgorithm := rsaEncryption
    - privateKey := privateKey
    - publicKey := publicKey

JUVIE

- 2. Create an EncryptedPrivateKeyInf data structure with the following properties:
  - EncryptedPrivateKeyInfo
    - encryptionAlgorithm := pbeWithSHAAnd3-KeyTripleDES-CBC
    - encryptedData := encrypted with passphrase PrivateKeyInfo data
- 3. Create an [PKCS#12] compliant PKCS#12 data structure *PKCS12data*) with the following properties:
  - version := v3
  - authSafe
    - SafeBag
      - Pkcs-12-PKCS9ShroudedKeyBag := EncryptedPrivateKeyInfo
      - PKCS12AttrSet
        - friendlyName := "testAlias"
    - SafeBag
      - Pkcs-12-CertBag := CAcert
      - PKCS12AttrSet
        - friendlyName := "testAlias"

### A.34 Subject for a server certificate (all DN-attributes)

Use the following subject for test cases:

- Subject.Country := "US"
- Subject.Organization := "ONVIF Test"
- Subject.OrganizationalUnit := "Unit test"
- Subject.DistinguishedNameQualifier := "DN Qualifier Test"
- Subject.StateOrProvinceName := "State Name Test"
- Subject.CommonName := "Common Name Test"
- Subject.SerialNumber := "00000000000"

- Subject.Locality := "LA"
- Subject.Title := "Mr"
- Subject.Surname := "SurnameTest"
- Subject.GivenName := "GivenNameTest"
- Subject.Initials := "AS"
- Subject.Pseudonym := "Pseudonym Test"
- Subject.GenerationQualifier := "GenerationQualifier Test"
- Subject.GenericAttribute.Type := "string"
- Subject.GenericAttribute.Value := "Test GenericAttribute"
- Subject.MultyValueRDN.Attribute.Type := "string"
- Subject.MultyValueRDN.Attribute.Value := "Test MultyValueRDN"

# A.35 Delete a certification path with corresponding certificate and RSA key pair when CertificateID is unknown

Name: HelperDeleteCertificationPath3

Procedure Purpose: Helper procedure to delete certification path and related certificate and RSA key pair when CertificateID is unknown.

Pre-requisite: Security Configuration Service is received from the DUT. Create self-signed certificate by the DUT as indicated by the SelfSignedCertificateCreationWithRSA or PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSAcapability. TLS is supported by the DUT as indicated by the TLSServerSupported capability.

**Input:** The identifier of the certification path (*certPathID*) and RSA key pair (*keyID*) to delete.

### Returns: None

- 1. ONVIF Client invokes GetCertificationPath request with parameters
  - CertificationPathID =: certPathID
- 2. The DUT responds with GetCertificationPathResponse with parameters
  - CertificationPath.CertificateID list =: certificateIDList

- CertificationPath.Alias =: CertPathAlias
- 3. If the DUT did not send a GetCertificationPathResponse message, FAIL the test and go to step 9.
- 4. ONVIF Client invokes DeleteCertificationPath message with parameters
  - CertificationPathID =: certPathID
- 5. The DUT responds with empty DeleteCertificationPathResponse message.
- 6. If the DUT did not send a DeleteCertificationPathResponse message, FAIL the test and go to step 8.
- 7. For each CertificateID (certificateID) in certificateIDList:
  - 7.1. ONVIF Client invokes GetCertificate message with parameters
    - CertificateID := certID
  - 7.2. The DUT responds with a GetCertificateResponse message with parameters
    - Certificate =: X509Cert
  - 7.3. ONVIF Client invokes DeleteCertificate with parameters
    - CertificateID =: certificateID
  - 7.4. The DUT responds with a **DeleteCertificateResponse** message.
  - 7.5. ONVIF Client deletes the RSA key pair (in X509Cert.KeyID) by following the procedure mentioned in Annex A.1 to restore DUT configuration.
- 8. Skip other steps.
- 9. ONVIF Client deletes the RSA key pair (in keyID) by following the procedure mentioned in Annex A.1 to restore DUT configuration.

### PASS -

· DUT passes all assertions.

### FAIL -

- DUT did not send GetCertificationPathResponse message.
- DUT did not send DeleteCertificationPathResponse message.

- DUT did not send DeleteCertificateResponse message.
- DUT did not send GetCertificateResponse message.

### A.36 Upload PKCS#12 – no key pair exists

Name: HelperUploadPKCS12

Procedure Purpose: Helper procedure to create and upload PKCS#12 data structure with new public key and private key.

Pre-requisite: Security Configuration Service is received from the DUT. Certificate along with an RSA private key in a PKCS#12 data structure upload is supported by the DUT as indicated by the PKCS12CertificateWithRSAPrivateKeyUpload capability. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional certification path.

#### Input: None

Returns: A [PKCS#12] compliant PKCS#12 data structure (PKCS12data) with CA certificate (CAcert) and a corresponding public key (publicKey) in the certificate along with the corresponding private key (privateKey) and certification path ID (certificationPathID) with corresponding key pair ID (keyID) for uploaded PKCS#12 data structure.

- 1. ONVIF Client creates a CA certificate (out CAcert) and a corresponding public key (out publicKey) in the certificate along with the corresponding private key (out privateKey) in the form of a PKCS#12 file (out PKCS12data) by following the procedure described in Annex A.30.
- 2. ONVIF Client invokes UploadCertificateWithPrivateKeyInPKCS12 with parameters
  - CertWithPrivateKey := PKCS12data
  - CertificationPathAlias := "ONVIF\_Certification\_Path\_Test"
  - KeyAlias := "ONVIF Key Test"
  - IgnoreAdditionalCertificates := false
  - IntegrityPassphraseID skipped
  - EncryptionPassphraseID skipped

- 3. The DUT responds with a UploadCertificateWithPrivateKeyInPKCS12Response message with parameters
  - CertificationPathID =: certificationPathID
  - KeyID =: keyID

### PASS -

DUT passes all assertions.

### FAIL -

DUT did not send UploadCertificateWithPrivateKeyInPKCS12Response message.

### A.37 Provide CRL

### Name: HelperCreateCRL

Procedure Purpose: Helper procedure to create CRL.

Pre-requisite: None.

Input: None.

Returns: A CRL (crl) that is compliant to [RFC 5280].

- 1. ONVIF Client creates a CRL that is compliant to [RFC 5280] and has the following properties:
  - tbsCertList[0].version := v2
  - tbsCertList[0].signature.algorithm := sha1-WithRSAEncryption
  - tbsCertList[0].issuer := "CN=ONVIF TT,C=US"
  - tbsCertList[0].thisUpdate := [current time]
  - tbsCertList[0].nextUpdate skipped
  - tbsCertList[0].revokedCertificates[0].userCertificate := [any certificate number]
  - tbsCertList[0].revokedCertificates[0].revocationDate := [current time]
  - signatureAlgorithm.algorithm := sha1-WithRSAEncryption

signatureValue := sha1-WithRSAEncryption signature

Note: ONVIF Client may return the same CRL in subsequent invocations of this procedure.

### A.38 Delete a CRL

Name: HelperDeleteCRL

Procedure Purpose: Helper procedure to delete a CRL.

Pre-requisite: Security Configuration Service is received from the DUT. CRLs supported by the DUT as indicated by the MaximumNumberOfCRLs capability.

**Input:** The identifier of CRL (*crlID*) to delete.

### Returns: None

### **Procedure:**

- 1. ONVIF Client invokes **DeleteCRL** request with parameters
  - CrIID =: crIID
- 2. The DUT responds with DeleteCRLResponse message.

### **Procedure Result:**

### PASS -

· DUT passes all assertions.

### FAIL -

• DUT did not send DeleteCRLResponse message.

### A.39 Upload a CRL

Name: HelperUploadCRL

Procedure Purpose: Helper procedure to upload a CRL.

Pre-requisite: Security Configuration Service is received from the DUT. CRLs supported by the DUT as indicated by the MaximumNumberOfCRLs capability. The DUT shall have enough free storage capacity for one additional CRL.

Input: The CRL alias (alias) and the CRL (crl).

www.onvif.org

#### Returns: The CRL identifier (crlID).

### **Procedure:**

- 1. ONVIF Client invokes UploadCRL with parameters
  - Crl =: *crl*
  - Alias := "Test CRL Alias"
  - · anyParameters skipped
- 2. The DUT responds with UploadCRLResponse message with parameters
  - CrIID =: crIID

### **Procedure Result:**

### PASS -

• DUT passes all assertions.

### FAIL -

• DUT did not send UploadCRLResponse message.

### A.40 Delete a certification path validation policy

#### Name: HelperDeleteCertPathValidationPolicy

Procedure Purpose: Helper procedure to delete a certification path validation policy.

Configuration Pre-requisite: Security Service is received from the DUT. Certification path validation policy supported by the DUT as indicated by the MaximumNumberOfCertificationPathValidationPolicies capability.

Input: The identifier of certification path validation policy (certPathValidationPolicyID) to delete.

### Returns: None

### **Procedure:**

- 1. ONVIF Client invokes DeleteCertPathValidationPolicy request with parameters
  - CertPathValidationPolicyID =: certPathValidationPolicyID
- 2. The DUT responds with DeleteCertPathValidationPolicyResponse message.

### **Procedure Result:**

www.onvif.org

### PASS -

· DUT passes all assertions.

### FAIL -

• DUT did not send DeleteCertPathValidationPolicyResponse message.

### A.41 Prepare certificate on the DUT

Name: HelperPrepareCertificate

Procedure Purpose: Helper procedure to create or upload certificate on the DUT.

Pre-requisite: Security Configuration Service is received from the DUT. Create self-signed certificate supported by the DUT as indicated by the SelfSignedCertificateCreationWithRSA capability and RSA key pair generation supported by the DUT as indicated by the RSAKeyPairGeneration capability or create PCKS#10 supported by the DUT as indicated by the PKCS10ExternalCertificationWithRSA capability or certificate along with an RSA private key in a PKCS#12 data structure upload is supported by the DUT as indicated by the PKCS12CertificateWithRSAPrivateKeyUpload capability. The DUT shall have enough free storage capacity for one additional certification path. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate.

### Input: None.

**Returns:** The identifier of the new certificate (*certID*), RSA key pair (*keyID*) and certification path if any (certificationPathID).

- 1. ONVIF Client gets the service capabilities (out cap) by following the procedure mentioned in Annex A.10.
- 2. If cap.KeystoreCapabilities.PKCS10ExternalCertificationWithRSA:
  - 2.1. ONVIF Client creates a CA certificate (out *CAcert*) and a corresponding private key (out privateKey) by following the procedure described in Annex A.4.
  - 2.2. ONVIF Client uploads a CA certificate (out certID, in CAcert) and new RSA key pair with the public key from the CA certificate (out keyID) by following the procedure described in Annex A.15.
  - 2.3. Set:

- *certificationPathID* := null
- 2.4. Skip other steps.
- 3. If *cap*.KeystoreCapabilities.SelfSignedCertificateCreationWithRSA and *cap*.KeystoreCapabilities.RSAKeyPairGeneration:
  - 3.1. ONVIF Client creates a self-signed certificate (out *certID*) and related RSA key pair (out *keyID*) by following the procedure mentioned in Annex A.8.
  - 3.2. Set:
    - certificationPathID := null
  - 3.3. Skip other steps.
- 4. If cap.KeystoreCapabilities.PKCS12CertificateWithRSAPrivateKeyUpload:
  - 4.1. ONVIF Client creates a CA certificate (out *CAcert*) and a corresponding public key (out *publicKey*) in the certificate along with the corresponding private key (out *privateKey*) in the form of a PKCS#12 file (out *PKCS12data*) and uploads it with certification path ID (out *certificationPathID*) and key pair ID (out *keyID*) by following the procedure described in Annex A.36.
  - 4.2. ONVIF Client invokes GetCertificationPath message with parameters
    - CertificationPathID =: certificationPathID
  - 4.3. The DUT responds with a GetCertificationPathResponse message with parameters
    - CertificationPath.CertificateID[0] =: certID
    - •CertificationPath.Alias
- 5. If (*cap*.KeystoreCapabilities.PKCS10ExternalCertificationWithRSA = false or skipped) and (*cap*.KeystoreCapabilities.SelfSignedCertificateCreationWithRSA = false or skipped or *cap*.KeystoreCapabilities.RSAKeyPairGeneration = false or skipped) and (*cap*.KeystoreCapabilities.PKCS12CertificateWithRSAPrivateKeyUpload = false or skipped), FAIL the test and skip other steps.

### PASS -

• DUT passes all assertions.

### FAIL –

### DUT did not send GetCertificationPathResponse message.

### A.42 Create a certification path validation policy

Name: HelperCreateCertPathValidationPolicy

Procedure Purpose: Helper procedure to create a certification path validation policy.

DUT. Pre-requisite: Security Configuration Service is received from the Certification path validation policy supported by the DUT as indicated by the MaximumNumberOfCertificationPathValidationPolicies capability. The DUT shall have enough free storage capacity for one additional certification path validation policy.

**Input:** The certification path validation policy alias (*alias*).

**Returns:** The certification path validation policy identifier (*certPathValidationPolicyID*), related certificate (certID), RSA key pair (keyID) and certification path if any (out certificationPathID).

### **Procedure:**

- 1. ONVIF Client prepares certificate (out certID), related RSA key pair (out keyID) and certification path if any (out certificationPathID) by following the procedure mentioned in Annex A.41.
- 2. ONVIF Client creates certification path validation policy identifier (out certPathValidationPolicyID) with specified alias (in alias) and the certificate identifier (in certID) for trust anchor by following the procedure mentioned in Annex A.44.

### **Procedure Result:**

### PASS -

DUT passes all assertions.

### A.43 Provide certificate signed by private key of other certificate

Name: HelperCreateSignedCertificate

**Procedure Purpose:** Helper procedure to create an X.509 certificate signed by private key of other certificate.

### Pre-requisite: None.

Input: The subject (subject) of certificate and private key (inputPrivateKey) of the CA-certificate (cert).

www.onvif.org

Returns: An X.509 certificate (cert) signed by input private key that is compliant to [RFC 5280] and a corresponding private key (privateKey) and public key (publicKey).

### **Procedure:**

- 1. ONVIF Client creates an X.509 certificate signed by inputPrivateKey that is compliant to [RFC 5280] and has the following properties:
  - version:= v3
  - signature := sha1-WithRSAEncryption
  - validity := validity from cert
  - subject := subject
  - issuerDN := subjectDN from cert

Note: ONVIF Client may return the same certificate in subsequent invocations of this procedure for the same subject and private key.

# A.44 Create a certification path validation policy with provided certificate identifier

Name: HelperCreateCertPathValidationPolicyWithCertID

Procedure Purpose: Helper procedure to create a certification path validation policy with provided certificate identifier.

Pre-requisite: Configuration DUT. Security Service is received from the Certification path validation policy supported by the DUT as indicated by the MaximumNumberOfCertificationPathValidationPolicies capability. The DUT shall have enough free storage capacity for one additional certification path validation policy.

Input: The certification path validation policy alias (alias) and the certificate identifier (certID) for trust anchor.

Returns: The certification path validation policy identifier (certPathValidationPolicyID).

- 1. ONVIF Client invokes CreateCertPathValidationPolicy with parameters
  - Alias := alias
  - Parameters.RequireTLSWWWClientAuthExtendedKeyUsage skipped

- Parameters.UseDeltaCRLs = true
- Parameters.anyParameters skipped
- TrustAnchor[0].CertificateID := certID
- anyParameters skipped
- 2. The DUT responds with CreateCertPathValidationPolicyResponse message with parameters
  - CertPathValidationPolicyID := certPathValidationPolicyID

### PASS -

· DUT passes all assertions.

### FAIL -

• DUT did not send CreateCertPathValidationPolicyResponse message.

### A.45 Provide CRL for specified certificate

Name: HelperCreateCRLForCertificate

Procedure Purpose: Helper procedure to create CRL for specified certificate signed with specified key.

Pre-requisite: None.

Input: The certificate for revocation (cert) and private key for signature (privateKey).

Returns: A CRL (crl) that is compliant to [RFC 5280].

- 1. ONVIF Client creates a CRL that is compliant to [RFC 5280] signed signed by private key privateKey and has the following properties:
  - tbsCertList[0].version := v2
  - tbsCertList[0].signature.algorithm := sha1-WithRSAEncryption
  - tbsCertList[0].issuer := "ONVIF DTT"
  - tbsCertList[0].thisUpdate := [current time] 1 day

- tbsCertList[0].nextUpdate skipped
- tbsCertList[0].revokedCertificates[0].userCertificate := cert
- tbsCertList[0].revokedCertificates[0].revocationDate := [current time] 1 day 1 hour
- signatureAlgorithm.algorithm := sha1-WithRSAEncryption
- signatureValue := sha1-WithRSAEncryption signature

Note: ONVIF Client may return the same CRL in subsequent invocations of this procedure.

### A.46 Upload a passphrase

Name: HelperUploadPassphrase

Procedure Purpose: Helper procedure to upload a passphrase.

Pre-requisite: Security Configuration Service is received from the DUT. Passphrase handling is supported by the DUT as indicated by the MaximumNumberOfPassphrases capability. The DUT shall have enough free storage capacity for one additional passphrase.

**Input:** The passphrase (*passphrase*) and passphrase alias (*alias*).

Returns: The passphrase identifier (passphraseID).

### **Procedure:**

- 1. ONVIF Client invokes UploadPassphrase with parameters
  - Passphrase := passphrase
  - PassphraseAlias := alias
- 2. The DUT responds with UploadPassphraseResponse message with parameters
  - PassphraseID =: passphraseID

#### **Procedure Result:**

### PASS -

DUT passes all assertions.

### FAIL -

DUT did not send UploadPassphraseResponse message.

### A.47 Remove Server Certificate Assignment

Name: HelperPreparationRemoveServerCertificateAssignment

Procedure Purpose: Helper to disable HTTPS and remove Server Certificate Assignment if required.

**Pre-requisite:** Security Configuration Service is received from the DUT. TLS is supported by the DUT as indicated by the TLSServerSupported capability.

Input: None.

Returns: Initial HTTPS State (initialHTTPSState). Removed Server Certificate Assignment (certPathID).

- 1. ONVIF Client invokes GetNetworkProtocols to retrieve configured network protocols of the DUT.
- 2. The DUT responds with a GetNetworkProtocolsResponse message with parameters
  - NetworkProtocols list =: networkProtocolsList
- 3. If networkProtocolsList does not contain network protocol with NetworkProtocols.Name is equal to HTTPS, FAIL the test and skip other steps.
- 4. If HTTPS protocol with NetworkProtocols.Name is equal to HTTPS from networkProtocolsList has NetworkProtocols.Enabled equal to true:
  - initialHTTPSState NetworkProtocols HTTPS 4.1. Set := value for from networkProtocolsList.
  - 4.2. ONVIF Client invokes SetNetworkProtocols message with parameters
    - NetworkProtocols[0].Name := HTTPS
    - NetworkProtocols[0].Enabled := false
    - NetworkProtocols[0].Port := *initialHTTPSState*.Port
    - NetworkProtocols[0].Extension skipped
  - 4.3. The DUT responds with a **SetNetworkProtocolsResponse** message.
  - 4.4. ONVIF Client waits for time operationDelay.
  - 4.5. Set HTTPSStateChangedFlag := true.

- ONVIF Client gets the service capabilities by following the procedure mentioned in Annex A.10 with the following input and output parameters
  - out cap Security Configuration Service Capabilities
- 6. ONVIF Client invokes GetAssignedServerCertificates.
- 7. The DUT responds with a **GetAssignedServerCertificatesResponse** message with parameters
  - CertificationPathID list =: initialCertificationPathList
- 8. If number of items in *initialCertificationPathList* = *cap*.TLSServerCapabilities.MaximumNumberOfTLSCertificationPaths:
  - 8.1. Set certPathID := initialCertificationPathList[0].
  - 8.2. ONVIF Client invokes RemoveServerCertificateAssignment .
    - CertificationPathID =: certPathID
  - 8.3. The DUT responds with a **RemoveServerCertificateAssignmentResponse** message.
  - 8.4. ONVIF Client waits for time operationDelay.

### PASS -

• DUT passes all assertions.

### FAIL -

- DUT did not send GetNetworkProtocolsResponse message.
- DUT did not send SetNetworkProtocolsResponse message.
- DUT did not send GetAssignedServerCertificatesResponse message.
- DUT did not send RemoveServerCertificateAssignmentResponse message.

Note: operationDelay will be taken from Operation Delay field of ONVIF Device Test Tool.

### A.48 Restore Server Certificate Assignment

Name: HelperRestoreServerCertificateAssignment

Procedure Purpose: Helper to restore HTTPS and Server Certificate Assignment if required.

Pre-requisite: Security Configuration Service is received from the DUT. TLS is supported by the DUT as indicated by the TLSServerSupported capability.

Input: Initial HTTPS State (initialHTTPSState). Removed Server Certificate Assignment (certPathID).

### Returns: None.

#### **Procedure:**

- 1. If certPathID specified:
  - 1.1. ONVIF Client invokes AddServerCertificateAssignment with parameters
    - CertificationPathID =: certPathID
  - 1.2. The DUT responds with an AddServerCertificateAssignmentResponse message.
  - 1.3. ONVIF Client waits for time operationDelay.
- 2. If initialHTTPSState specified:
  - 2.1. ONVIF Client invokes SetNetworkProtocols message with parameters
    - NetworkProtocols[0] := initialHTTPSState
  - 2.2. The DUT responds with a SetNetworkProtocolsResponse message.
  - 2.3. ONVIF Client waits for time operationDelay.

#### **Procedure Result:**

### PASS -

· DUT passes all assertions.

#### FAIL -

- DUT did not send AddServerCertificateAssignmentResponse message.
- DUT did not send SetNetworkProtocolsResponse message.

Note: operationDelay will be taken from Operation Delay field of ONVIF Device Test Tool.

### A.49 Configuring HTTPS if Required

Name: HelperCheckAndConfigureHTTPS

www.onvif.org

Procedure Purpose: Helper Procedure to check and configure HTTPS using Security Configuration Service if required.

Pre-requisite: RTP/RTSP/HTTPS feature is supported by DUT. HTTPS is configured on the DUT, if TLS Server is not supported by DUT. Security Configuration Service is received from the DUT, if TLS Server is supported by DUT.

Input: None.

Returns: None.

### **Procedure:**

- 1. ONVIF Client invokes GetNetworkProtocols request.
- 2. The DUT responds with GetNetworkProtocolsResponse with parameters
  - NetworkProtocols list =: networkProtocolsList
- 3. If networkProtocolsList contains item with Name = HTTPS and Enabled = true, return to the test and skip other procedure steps.
- 4. If the DUT does not support TLS Server, FAIL the test and skip other steps.
- 5. ONVIF Client configures HTTPS by following the procedure mentioned in Annex A.50.

### **Procedure Result:**

### PASS -

DUT passes all assertions.

### FAIL -

• DUT did not send GetNetworkProtocolsResponse message.

### A.50 Configuring HTTPS using Security Configuration Service

### Name: HelperConfigureHTTPS

**Procedure Purpose:** Helper Procedure to configure HTTPS using Security Configuration Service.

Pre-requisite: Security Configuration Service is received from the DUT. TLS Server is supported by the DUT. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional certification path. The DUT shall have enough free storage capacity for one additional server certificate assignment. Current time of the DUT shall be at least Jan 01, 1970.

### Input: None

### Returns: None

### **Procedure:**

- 1. ONVIF Client invokes GetAssignedServerCertificates.
- 2. The DUT responds with a GetAssignedServerCertificatesResponse message with parameters
  - CertificationPathID list =: initialCertificationPathList
- 3. If number of items in *initialCertificationPathList* >= 1, go to the step 6.
- 4. If Create self-signed certificate is supported by the DUT:
  - 4.1. ONVIF Client adds server certification assignment and creates related certification path, the self-signed certificate and the RSA key pair by following the procedure mentioned in Annex A.13.
  - 4.2. Go to the step 6.
- 5. ONVIF Client creates a certification path based on CA-signed certificate and related RSA key pair and a corresponding CA certificate and related RSA key pair by following the procedure mentioned in Annex A.51.
- ONVIF Client invokes SetNetworkProtocols request with parameters
  - NetworkProtocols[0].Name := HTTPS
  - NetworkProtocols[0].Enabled := true
  - NetworkProtocols[0].Port := 443
  - NetworkProtocols[0].Extension skipped
- 7. The DUT responds with SetNetworkProtocolsResponse message.
- 8. ONVIF Client waits until operationDelay timeout expires.
- 9. ONVIF Client checks that HTTPS protocol Port 443 is open. If HTTPS protocol port 443 is not open, FAIL the test and skip other steps.

### **Procedure Result:**

### PASS -

DUT passes all assertions.

### FAIL -

DUT did not send SetNetworkProtocolsResponse message.

Note: operationDelay will be taken from Operation Delay field of ONVIF Device Test Tool.

# A.51 Add server certificate assignment with corresponding certification path, CA certificate and RSA key pair

Name: HelperAddServerCertAssign CACertificate

**Procedure Purpose:** Helper Procedure to configure HTTPS using Security Configuration Service.

Pre-requisite: Security Configuration Service is received from the DUT. TLS Server is supported by the DUT. Create PCKS#10 supported by the DUT. RSA key pair generation is supported by the DUT. The DUT shall have enough free storage capacity for one additional RSA key pair. The DUT shall have enough free storage capacity for one additional certificate. The DUT shall have enough free storage capacity for one additional certification path. The DUT shall have enough free storage capacity for one additional server certificate assignment.

### Input: None

Returns: The identifiers of the new certification path (certPathID), certificate (certID) and RSA key pair (keyID).

- 1. ONVIF Client creates an RSA key pair by following the procedure mentioned in Annex A.7 with the following input and output parameters
  - out keyID RSA key pair
- 2. ONVIF Client invokes CreatePKCS10CSR with parameter
  - Subject := subject (see Annex A.2)
  - KeyID := keyID
  - CSRAttribute skipped
  - SignatureAlgorithm.algorithm := 1.2.840.113549.1.1.5 (OID of SHA-1 with RSA Encryption algorithm)
- 3. The DUT responds with CreatePKCS10CSRResponse message with parameters

- PKCS10CSR =: pkcs10
- 4. ONVIF Client creates an CA certificate by following the procedure mentioned in Annex A.4 with the following input and output parameters
  - out CAcert CA certificate
  - out privateKey private key for the CA certificate
  - out publicKey public key for the CA certificate
- 5. Create an [RFC5280] compliant X.509 certificate (cert) from the PKCS#10 request (pkcs10) with the following properties:
  - version:= v3
  - signature := sha1-WithRSAEncryption
  - subject := subject from the PKCS#10 request (pkcs10)
  - subject public key := subject public key in the PKCS#10 request (pkcs10)
  - validity := not before 19700101000000Z and not after 99991231235959Z
  - certificate signature is generated with the private key (privateKey) in the CA certificate (CAcert)
  - certificate extensions := the X.509v3 extensions from the PKCS#10 request (pkcs10)
- 6. ONVIF Client invokes UploadCertificate with parameters
  - Certificate := cert
  - Alias := "ONVIF Test1"
  - PrivateKeyRequired := true
- 7. The DUT responds with a **UploadCertificateResponse** message with parameters
  - CertificateID =: certID
  - KeyID =: keyID
- 8. ONVIF Client invokes CreateCertificationPath with parameters
  - CertficateIDs.CertificateID[0] := certID
  - Alias := "ONVIF\_Test2"

- 9. The DUT responds with a CreateCertificationPathResponse message with parameters
  - CertificationPathID =: certPathID
- 10. ONVIF Client invokes AddServerCertificateAssignment with parameters
  - CertificationPathID := certPathID
- 11. The DUT responds with an AddServerCertificateAssignmentResponse message.
- 12. ONVIF Client waits for time operationDelay.

### PASS -

• DUT passes all assertions.

### FAIL –

- DUT did not send CreatePKCS10CSRResponse message.
- DUT did not send UploadCertificateResponse message.
- DUT did not send CreateCertificationPathResponse message.
- DUT did not send AddServerCertificateAssignmentResponse message.

Note: operationDelay will be taken from Operation Delay field of ONVIF Device Test Tool.

### A.52 Basic TLS Handshake With Protocol Version Alert

Name: HelperBasicTLSHandshakeProtocolVersionAlert

**Procedure Purpose:** Helper procedure to verify basic TLS handshake in case of "protocol\_version" alert message.

**Pre-requisite:** TLS is supported by the DUT as indicated by the TLSServerSupported capability. TLS is configured. HTTPS protocol is enabled.

Input: Disabled TLS version (*disabledTLSVersion*).

Returns: None

### Procedure:

1. ONVIF Client invokes ClientHello with parameters

- ClientVersion := disabledTLSVersion
- Random number := ClientRandom[32], that is 4-byte number that consists of the client's date and time plus a 28-byte randomly generated number
- CipherSuites := list of common CipherSuites used by TLS 1.0, SSL 2.0 and 3.0
- Compression methods list := NONE
- <SessionID> skipped
- 2. The DUT TLS server responds with a protocol\_version alert message and close connection.

### PASS -

• DUT passes all assertions.

### FAIL -

• DUT did not send protocol\_version alert message.
